

Full-stack developer

Apply Now

Join us in building the future generation of robots and software for logistics!

We are looking for a full-stack developer to join our exciting startup, to help us in the development of a revolutionizing end-to-end solution for automation of warehouses. In our start-up we develop cutting-edge software, outstanding mobile robots, and smart warehouse equipment to deliver to our customers an unseen new concept on how they can automate their warehouse processes.

Your profile

Your experience includes:

- experience in developing web apps that includes user interaction and data visualization,
- design a UI/UX based on the requirements of the customer and the internal projects we are developing,
- manage and scale our database architecture,
- develop complex algorithms to manage and synchronize our processes,
- develop, deploy and maintain our web application used by multiple users that interact with our system,
- interface the web application with external local systems that we develop,
- implement cutting-edge features according to our product roadmap (based on the needs of our customers)
- use of GitHub,
- experience in using Azure (optional).

Personally, you:

- would love to collaborate and take a key role in our development team,
- would love to join an exciting startup environment and work closely with an extremely prepared and driven team with members from ETH and Cambridge,
- can show a track-record of previous complex web app projects,
- have a passion for good software architecture,
- love to code and take pride in writing quality, re-usable and scalable code,
- are a solution- and team-oriented person.

Details

- Start date: ASAP
- Employment: 100%
- Location: Stettbach, Zurich
