

BizDev @Fountain

Are you hyped about crypto and want to join industry veterans from [MakerDAO](#) in an early stage startup? Are you excited to shape the future financial system on [Ethereum](#) and other open blockchains? Drop us a short line!

Our team...

We are 4 people who have left MakerDAO to found [Fountain](#). We have a big vision, deep expertise about our market and execute fast. We have received seed funding and pay competitively for everyone who joins.

.. and project

At [Fountain](#) we envision a future financial system based on digital securities, which massively simplifies to raise capital and to invest in and trade equity stakes (be it in startups, real estate or trade finance). Our mission is to unlock the trillions of private markets for DeFi ([Decentralized Finance](#)). To achieve this, we are building a decentralized exchange focused uniquely on trading securities. Our MVP is ready to launch within the next weeks and we're currently onboarding partners for that.

We are looking for...

A business hire that is passionate about crypto and jumps at the opportunity to change our future financial system. You should be a self starter who leverages the autonomy we offer in an early stage startup, own your role and challenge the rest of the team if it makes sense. We highly value your creativity and insights on the market, processes and strategy - or any other contributions you feel you can make. Your initial task is to help us onboard partners to our MVP platform and grow the product from there.

What you get

- Competitive compensation
- A chance to shape the revolutionary future financial system
- Work alongside industry veterans and learn on the go
- Join a team of young and enthusiastic people
