

Co-Founder & Lead AI Engineer (Python / LLMs)

Join **finant.ai** — Building the **next big thing** in **fintech** for **private markets**.

- **Location:** Flexible
- **Type:** Part-time (transition to full-time upon funding) with min. 20 hrs/week
- **Role Level:** Founding Engineer
- **Equity:** Significant equity stake OR competitive salary + equity
- **Language:** Fluent in English

Who we are

At **finant.ai**, we are building more than just a platform — we are creating the tools that allow investors to **manage bigger portfolios and scale revenue faster** than ever before.

We are building an **AI-native, single-source-of-truth** solution to automate the complex legal, accounting and operating processes that power investment firms, fund administrators, family offices and asset allocators.

We are **pre-launch, moving fast**, and looking for a **Lead AI Engineer** to join us early and co-create something impactful, scalable, and truly industry-defining.

Founded by [Persefoni Noulika](#) — an experienced leader in **private equity investing and fundraising** with over **15** years of international experience. Persefoni has worked for global brands like [BlackRock](#) and [UBS](#), where she **led significant growth equity rounds** in technology and **deployed over \$1bn in equity**. She also **co-founded and led a \$1bn AUM** impact strategy fund for BlackRock.

Why this matters

Our vision is bold: Eliminate legacy tools and manual busywork to allow customers to **add scale faster**, operate more **efficiently**, and utilize their data more **intelligently** through design and tech.

And to bring this to life, we are keeping it lean, human, and intentional — just real work, shared ownership, and a belief that great things are built together.

This is your chance to join a purpose-led startup from day one.

Our values

We are a value-driven team — and we mean it.

- **Stay Curious** – Always challenge first principles
- **Be Bold** – Build creatively, not blindly
- **Lead with Customers** – Make what matters
- **Keep it Human** – Act with kindness, transparency, and purpose

The role

You'll lead **finant.ai**'s technical direction — from building the MVP and shaping the architecture to aligning tech with product and investor strategy. You'll work closely with the founder and take real ownership.

- **Tech stack (suggested):** Python, ML Frameworks (TensorFlow/PyTorch), React, LLMs, Vector DBs, Cloud Infrastructure (GCP/AWS), Git/version control

What you'll lead & create

- Build and evolve **finant.ai**'s MVP
- Set up scalable architecture, DevOps flows (CI/CD, staging/prod)
- Drive technical roadmap and collaborate on product UX
- Work with our external dev agency/contractors to ensure quality
- Launch the public website (CMS, hosting, analytics)
- Own and manage early analytics setup and performance tracking
- Prepare technical documentation and pitch support for fundraising
- Be part of key investor conversations and technical visioning
- Grow the team and set engineering culture

What we're looking for

- Strong skills in AI/ML development (e.g. Python, TensorFlow/PyTorch, React)
- Comfort with fast MVP building, startup tooling (GitHub, Cloud Platforms, CI/CD)
- Experience working with LLMs, embedding models (OpenAI, Anthropic, Google), RAG and frameworks like Langchain and LlamaIndex
- Good eye for UX and structured, architectural thinking
- Ability to work independently but co-build collaboratively
- Startup resilience: calm in chaos, energized by ambiguity
- Bonus if you've led complex data integrations (e.g., APIs, data pipelines, analytics)
- Strong communication skills — honest, clear, human

Want in?

This is the opportunity to be part of rebuilding the next foundation layer of a multi-trillion-dollar industry still running on spreadsheets and legacy tools.

If you're ready to build smart, move fast, and shape something people will actually use, send us your CV at persefoni.nouluka@gmail.com. Feel free to reach out with any questions!
