

Fokussiere dich auf Immobilien nicht auf Datenmanagement

AssetOS - Join Us

During the past months, AssetOS brought together a team of experienced founders and industry experts with deep roots in real estate, software engineering, and AI. Our team, armed with decades of experience, has set its sights on one of the most frustrating challenges in the real estate industry: eliminating the tedious manual processes that drain time and energy from transactions and asset management.

Real estate workflows haven't changed in decades. The industry still relies on manual tasks, from conducting due diligence to managing assets—long hours spent digging through data rooms, reconciling knowledge, and trying to make sense of scattered information.

Today, we are building a platform that brings automation and LLM-powered analysis into the heart of real estate transactions. We're revolutionizing how investors and asset managers gather, process, and act on critical data, so they can spend less time on grunt work and more time making smart investment decisions.

And yes, this may sound ambitious. But our team has a track record of driving real change. We've scaled companies with cutting-edge solutions, and now we're focused on reshaping how real estate investors interact with data, taking deal-making to the next level and going beyond!

By the way, AssetOS is live today and we've got clients!

So, if you're ready to transform how you manage your transactions and assets, reach out. Meet the team, experience the product, and join a growing community of real estate professionals who are tired of the old ways and eager to embrace a smarter future.

We're looking for people who can build things

People who want to get their hands dirty & have done so in the past. No doubt: You should be an experienced engineer or a subject matter expert in whatever you do — we're working in a very complex field and building the perfect solution is definitely a technical challenge.

But we don't care if you worked for a big tech company or graduated from a private school in Palo Alto. It's much more interesting to us if you're passionate about exploring new tech, have built your own projects on the side, or created your own things in the past.

Tech stack

We're looking for an (experienced) Fullstack Engineer to join us. We value hands on attitude and high-problem solving skills more than anything.

- NextJS w Typescript, for both frontend and backend
- [Postgres](#) & [Drizzle](#)
- Cloud infrastructure on AWS (using <https://sst.dev/>)
- Vercel AI SDK

🌟 Why it's exciting to join

- We're still in the early-stage, incorporated roughly a year ago (October 2024).
- We have a first handful of customers, so you'll contribute to & shape the core architecture.
- Solve challenging problems (unusual business restrictions, compliance & a high degree of complexity).

👤 Your profile

- Ability to own projects end-to-end.
- 3+ years of experience with JS-based backends & Typescript & React.
- Strong experience with API architecture, complex data models & data accessing.
- Strong proficiency in software testing strategies, security & architecture best practices.
- Database first way of thinking: Data integrity while maintaining flexibility wrt to data models is key.
- [Bonus]: Experience with LLMs and ML pipelines (we're building several AI features for our customers).

👉 What we value

- Being hands-on. We are looking for people that own their work and get things done.
- You understand the philosophy: make it work, make it right, make it fast.
- You have experiences in system design and scalable architecture.
- You are driven by tests to keep the architecture as simple as possible (no over-engineering).
- You understand the stakes of building fast and staying flexible to update any piece of code if needed.
- You love creating a project from scratch and see it scaling as a product solving a pain for many customers.

👋 Let's chat!

Don't meet every single requirement? At AssetOS, we're building an inclusive, diverse, and dynamic workplace, so if you're excited about what we're building - we encourage you to get in touch!

Also: No need to write up a cover letter. Just shoot us a quick message — ideally with a link of something you've built!
