

AI Stack Engineer

fore ai, Zurich

Jan 23, 2025

Fore AI is a tech startup based in Zurich, Switzerland, focused on building agentic AI to automatically test and catch bugs in software applications. Founded by ex-Google engineers, the team has a strong track record of creating AI-powered products used by millions of users.

Our product turns natural language test case descriptions into automatically executed tests against our customers' web applications, run on our platform. Go check out foreai.co for more information.

We raised a round of VC funding last year, have signed our initial paying customers and are marching towards our next milestone. As we are expanding to more customers, we are growing our team and are looking for an exceptional generalist software engineer to join our team. We currently don't use specialized roles for our engineers. At fore ai, every engineer is solving the next problem at hand. The daily tasks range from debugging and resolving quality issues, infrastructure and cloud setups all the way to tweaking the UI to finalize that one feature.

Working at fore ai will enable you to jump into the midst of the AI revolution that is happening right in front of us.

About you:

- You have an MSc in Computer Science (or related) or equivalent practical experience.
- You have contributed to multi-person software engineering projects and bring along real-world coding experience in Python, and preferably one other language like Java or C++.
- You are a problem solver: You don't wait for someone to tell you what the next step is, but work towards pragmatic solutions, always with the goal in mind.
- You can't let go to get to the bottom of things.
- You enjoy working in teams, you like brainstorming and iterating to find and pursue the best possible solution.
- You want to get first hand exposure to agentic AI.
