

Job Description

Co-Founder & Chief Technology Officer

Idda Health is a women's health startup on a strong mission: Empowering millions of women with endometriosis to take charge of their own lives.

To ensure a successful launch of Idda Health, we are looking to strengthen our team with a Chief Technology Officer and Co-Founder.

For questions, reach out to: careers@idda.health

Co-Founder & Chief Technology Officer

This position is a full-time and operational role. This is a unique opportunity to drive the development and launch of an innovative molecular diagnostic and supporting diagnostic software for endometriosis patients in the US and global markets.

While Idda Health is a remote-first company, we seek a person based in Switzerland or in the USA. Solid knowledge of software as medical devices and digital platforms development is a must, specific experience in women's health and in vitro diagnostics is a big plus. Periodic team workshops will take place in Switzerland and the USA.

Key Responsibilities:

You will be:

- co-founding and serving as a member of the Executive Management Team owning the areas of data science and digital technologies.
- accountable for defining and executing Idda's data science and digital technology strategy in order to fuel our product portfolio with new and impactful solutions for endometriosis patients.
- accountable for translating our discoveries into robust, safe and reliable products in compliance with the relevant regulatory requirements and industry standards (21 CFR Part 820, ISO13485, ISO20916, ISO27001, HIPAA and GDPR).

- accountable for identifying resource needs, for shaping the company vision and product strategy, and for hiring, motivating and developing top talents to achieve our company's mission.

Key Requirements:

You love the idea of fully understanding and solving the challenges of the endometriosis patient journey. You want to build a network of leading scientific, clinical and product experts in this field. Jointly with our business development team you want to identify the right partners, learn from the real world and develop the best solutions for women suffering from endometriosis. You are a passionate and curious person, a fast and eager learner.

Working in a startup sounds exciting to you, or is something which you have already done. You are an innovator, curious and highly interested in the latest healthcare news and digital tools. You are ambitious, independent, trying to reach a massive impact. You go the extra mile and do not accept the status quo as a given. You make it happen.

You love hands-on work, work in a team and collaborate on bringing tangible solutions for an understudied, underfunded disease directly to patients.

You are a good listener, open to building on ideas from others no matter what level they are. You are able to communicate your ideas clearly and develop good solutions jointly in a team. You know how to combine fun and strong results within a team. You dislike arrogance.

- **Education:** You have an advanced degree in life sciences or engineering from a renowned university.
- **Experience:** You have solid work experience with machine learning techniques and neural networks. You are familiar with cloud computing and web development.

You have solid knowledge of several programming languages, including Python and R, as well as you are familiar working with version control (e.g. git).

You are familiar with software development and with analyzing high throughput biological datasets, preferably working with single-cell sequencing data (e.g. NGS, RNA-seq or scPCR).

You are familiar or willing to learn the principles of SaMD product development, validation and the FDA regulatory path.

You know what it takes to efficiently build connections with partners and suppliers.

You have a proven track record of success in your previous roles. Experience in startups or scaleups is a plus.

- **General:** You like and work effectively in remote settings, connecting with your team on a daily basis.

What we offer:

- An exciting and unique opportunity to build a leading startup in women's health, launching cutting-edge products for endometriosis that will radically improve the lives of millions of patients. We possess the most advanced product in the field of molecular diagnostics for endometriosis and we have built significant momentum in the past year.
- Work in a collaborative, multi-disciplinary, and international team at the interface of biomedical sciences, data science and medical device development.
- Co-ownership and competitive compensation package.
- Remote work environment, employee benefits and flexible work mode.

Are you fascinated by the idea of making a strong difference with a novel approach to women's health? Would you like to shape an ambitious, fast-paced global team, with a lot of space to impact the field with your own ideas and initiatives?

If yes, please send your CV and motivation letter to careers@idda.health
