

ORDERING

**Computer likes things in to be in order. Why?
It's easier to find things that are ordered!
Imagine you read a book and all pages are out of order,
How easy would it be to read it?**

Question for discussion: What are some things you want to be in order?

To order things we need to compare them by some quality.
For example we can order kids by age, by height, by length of their hair.

Now it's your turn! How would you order images in each row and why?
