End of Session

# Conceptual Video: Sequencing

Algorithm:

An algorithm is a sequence composed of ordered steps used to give a solution to a problem.

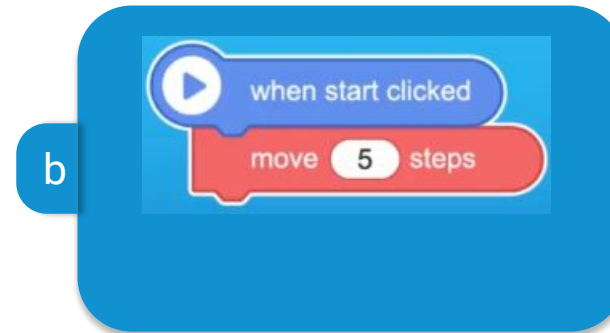

Algorithms are abstract, that is, they are models or guidelines for ordering processes.

For example, to represent the path that Alex must follow to get to the treasure, blocks are used to represent the steps that he will execute, that is an abstraction, modeling something real through a representation.

## Conceptual Video: Sequencing (Exercise 1)

What algorithm or sequence of orderly steps should I follow to get to the treasure?

The correct answer is (a) because you must first move forward 3 times, turn left  $90^\circ$  at this point and then move forward twice.

## Conceptual Video: Sequencing (Exercise 2)

Which algorithm should I follow to get to the treasure that is further south and further west?

a

```

when start clicked
  move 2 steps
  Turn -90 degrees
  move 1 steps
  
```

b

```

when start clicked
  move 4 steps
  Turn 90 degrees
  move 2 steps
  
```

c

```

when start clicked
  move 4 steps
  Turn -90 degrees
  move 2 steps
  
```

The correct answer is c, then the algorithm to follow is to move forward 4 times, then turn to the right of the character and finally move forward two more times.

## Conceptual Video: Sequencing (Exercise 3)

By which path is the shortest algorithm built to reach the treasure?

b

### Camino B

when start clicked

- Turn **-90** degrees
- move **2** steps
- Turn **90** degrees
- move **3** steps

a

### Camino A

when start clicked

- Turn **90** degrees
- move **2** steps
- Turn **-90** degrees
- move **1** steps
- Turn **-90** degrees
- move **4** steps

The shortest algorithm is constructed along path (b).

## Video Tutorial

The second part of the content corresponds to the 'Video tutorial'. In this section the student will learn how to use the sequencing concept in a code editor.

Intro Video

Video-tutorial

Challenge

File Manager

Quiz

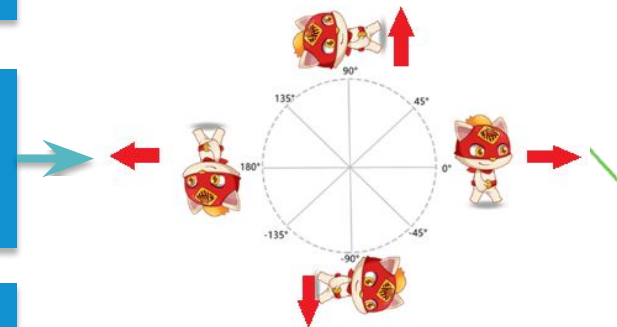

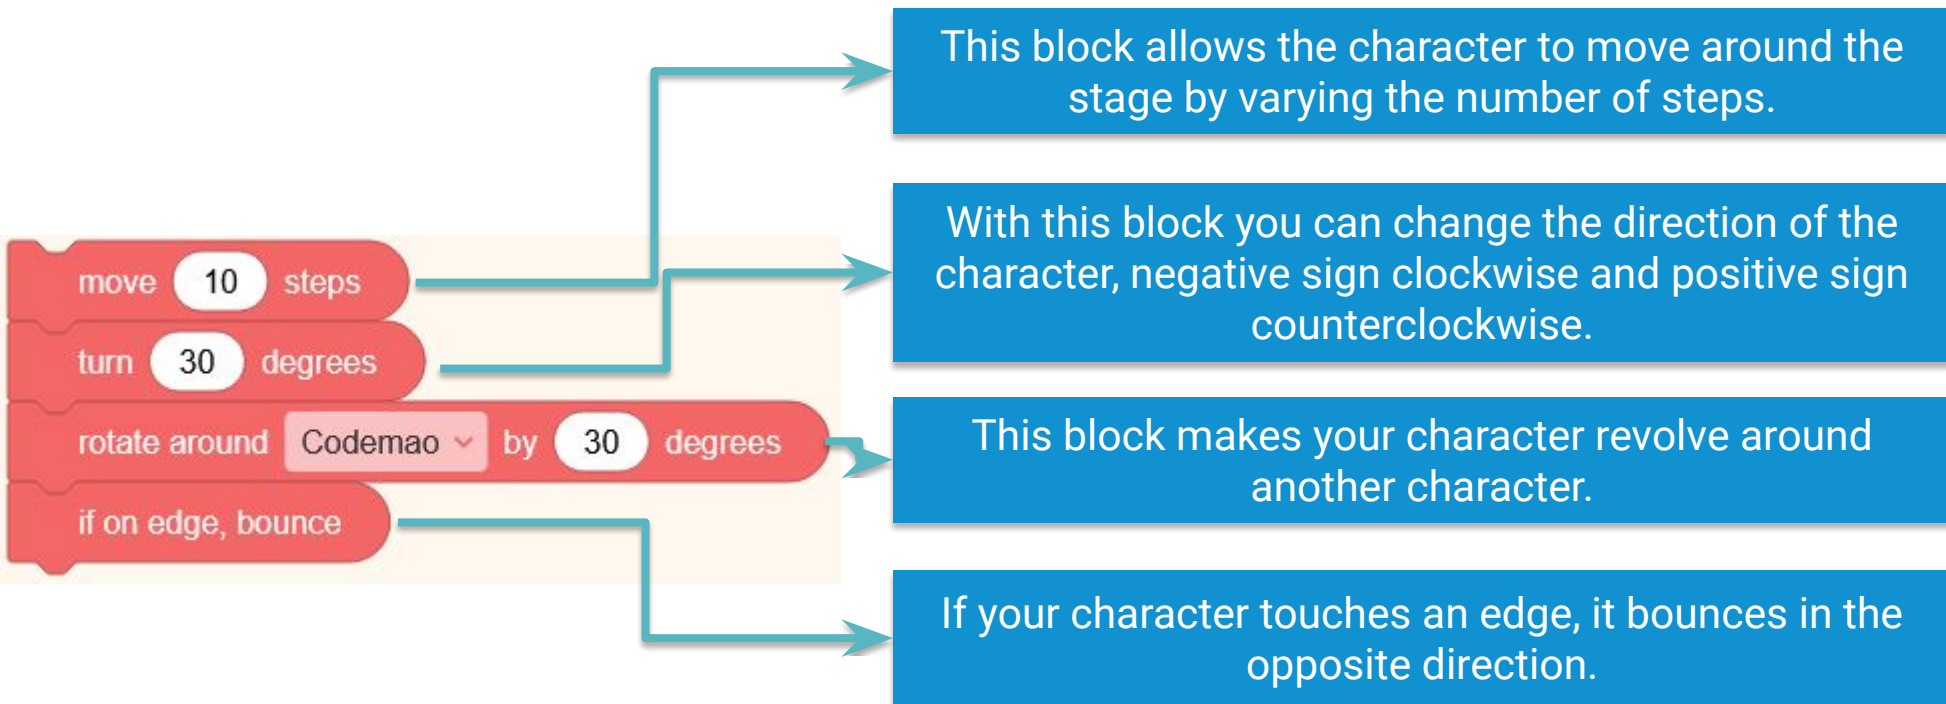

End of Session

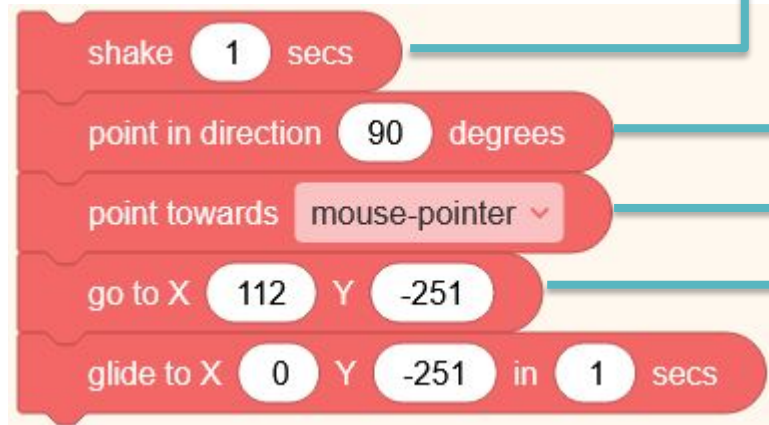

## Video Tutorial: Motion Blocks Part 1

For this session we will learn how to use some movement blocks such as:

## Video Tutorial: Motion Blocks Part 2

Here we have additional movement blocks:

This block can be used to make your character shake for a few seconds.

If you want the character to point in a specific direction you can use this block.

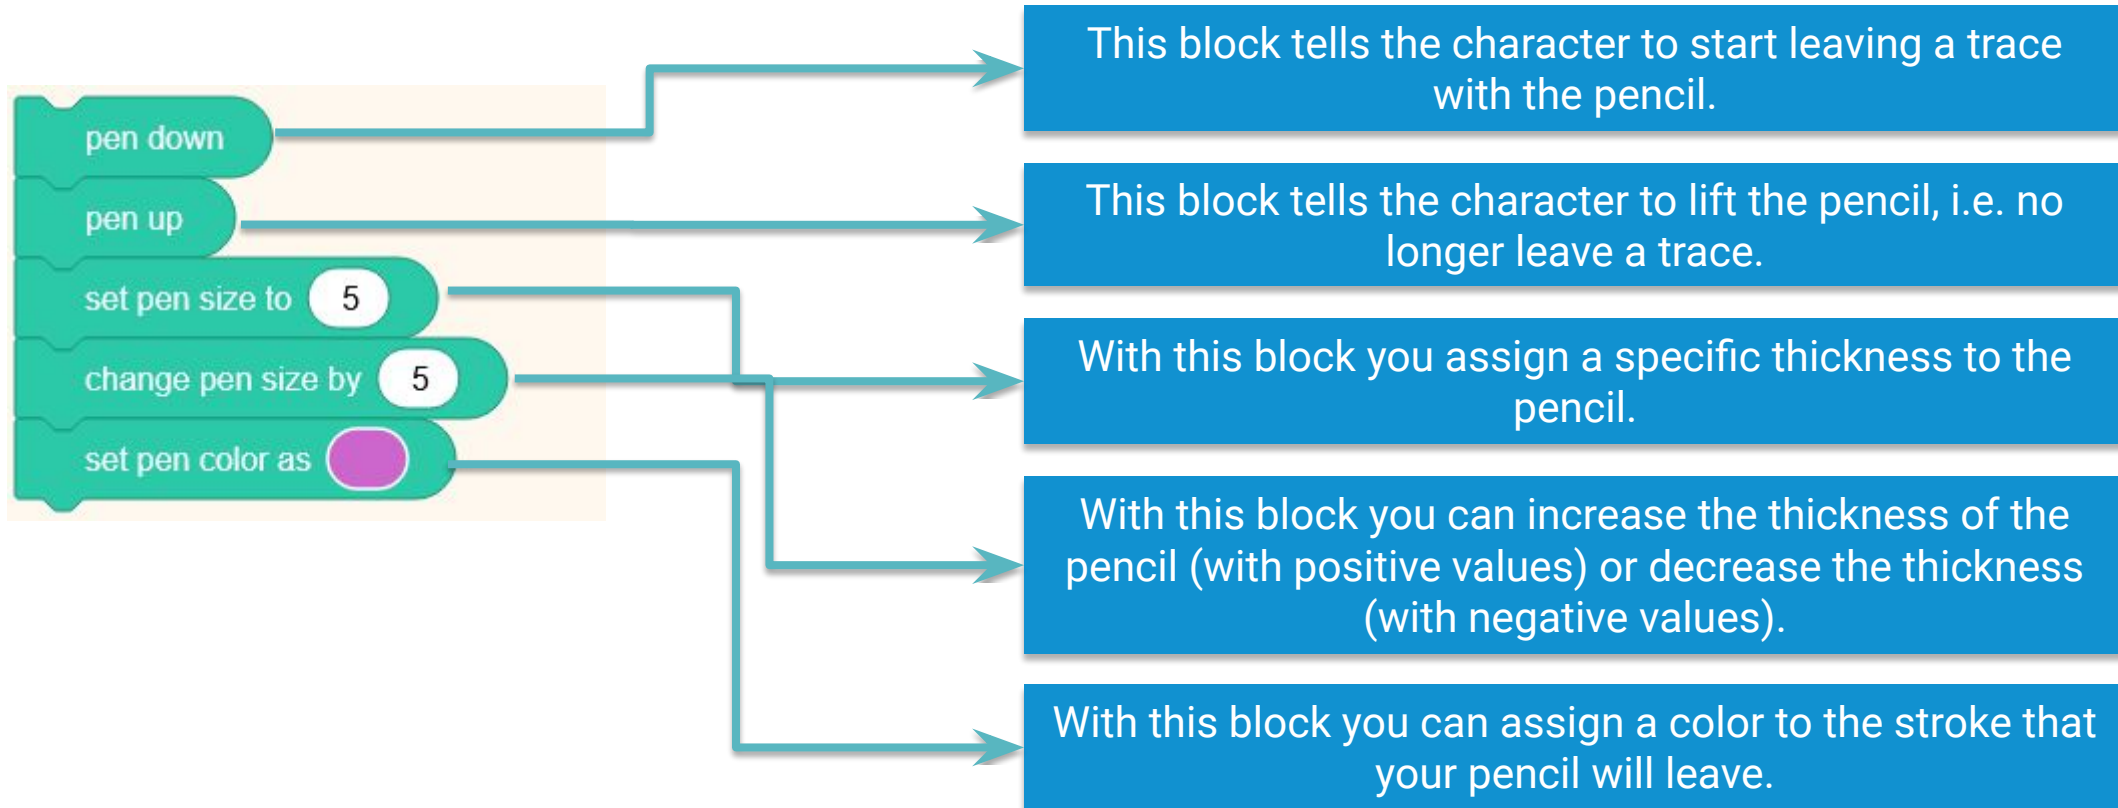

You can also tell it to point to where the mouse pointer or another character is located.

With this block you can tell your character to teleport to specific X and Y coordinates.

With this block you can tell it to slide to X and Y coordinates for a few seconds.

## Video Tutorial: Sequencing

The blocks needed to draw are these:

## STEAM Challenge

The third part of the content corresponds to the STEAM challenge. In this section the student must perform practical exercises to strengthen the concepts learned.

You can use the navigation buttons to go to a particular exercise.

Step: 1 2 3 4 5 6

STEAM Challenge Exercise 1

STEAM Challenge Exercise 2

STEAM Challenge Exercise 3

STEAM Challenge Exercise 4

STEAM Challenge Exercise 5

STEAM Challenge Exercise 6

## STEAM Challenge: Exercise 1

Build an algorithm or sequence that draws a fish like the one in the picture (each grid line is 20 steps, each diagonal is 28 steps).

To start drawing the figure shown, place your character in the position  $X = 0$  and  $Y = 0$ , keep in mind that the turns of this figure are made at  $45^\circ$  angles

## STEAM Challenge: Exercise 2

Build an algorithm or sequence that draws a fish like the one in the picture (each grid line is 20 steps, each diagonal is 28 steps).

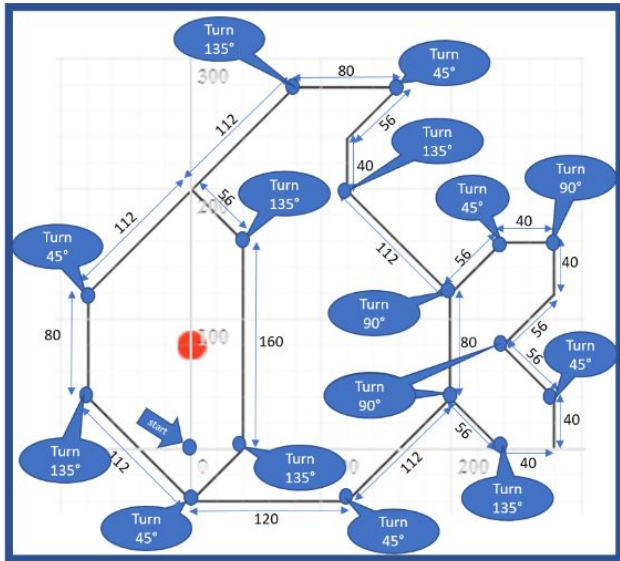

Keep in mind that the algorithm to solve this challenge must at one point raise the pencil to stop writing and then make the line that draws the part of the fish's head.

# STEAM Challenge: Exercise 4

Build an algorithm or sequence that draws a fish like the one in the picture (each grid line is 20 steps, each diagonal is 28 steps).

```

when Start clicked
  turn -90 degrees
  move 40 steps
  pen down
  turn 90 degrees
  move 120 steps
  turn 45 degrees
  move 112 steps
  turn -90 degrees
  move 56 steps
  turn 45 degrees
  move 40 steps
  turn 90 degrees
  move 40 steps
  turn 45 degrees
  move 56 steps
  turn -90 degrees
  move 56 steps
  
```

```

turn 45 degrees
move 40 steps
turn 90 degrees
move 40 steps
turn 45 degrees
move 56 steps
turn 45 degrees
move 80 steps
turn -135 degrees
move 112 steps
turn -45 degrees
move 40 steps
turn -45 degrees
move 56 steps
turn 135 degrees
move 80 steps
  
```

```

turn 45 degrees
move 224 steps
turn 45 degrees
move 80 steps
turn 45 degrees
move 112 steps
turn 90 degrees
move 56 steps
turn 45 degrees
move 160 steps
turn 45 degrees
move 56 steps
turn -135 degrees
move 120 steps
  
```

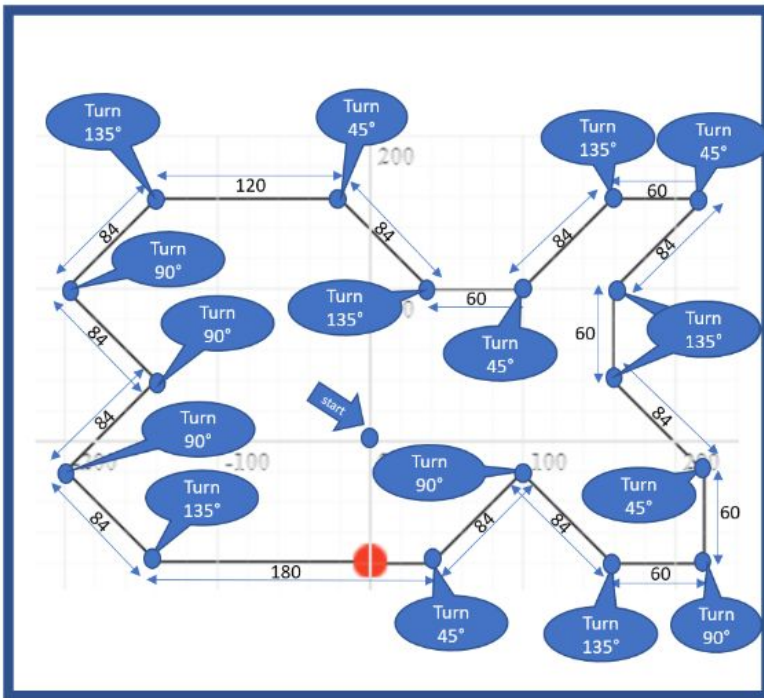

When leaving your character at the point (0,0) the first thing you should do is locate yourself where you are going to start your drawing and then use the block to lower the pencil.

# STEAM Challenge: Exercise 5

Build an algorithm or sequence that draws a fish like the one in the picture (each grid line is 20 steps, each diagonal is 28 steps).

```

when Start clicked
  turn -90 degrees
  move 80 steps
  pen down
  turn 90 degrees
  move 40 steps
  turn 45 degrees
  move 84 steps
  turn -90 degrees
  move 84 steps
  turn 45 degrees
  move 60 steps
  turn 90 degrees
  move 60 steps
  turn 45 degrees
  move 84 steps
  turn -45 degrees
  move 60 steps
  
```

```

turn -45 degrees
move 84 steps
turn 135 degrees
move 60 steps
turn 45 degrees
move 84 steps
turn -45 degrees
move 60 steps
turn -45 degrees
move 84 steps
turn 45 degrees
move 120 steps
turn 45 degrees
move 84 steps
turn 90 degrees
move 84 steps
turn -90 degrees
move 84 steps
turn -45 degrees
move 60 steps
  
```

```

turn 90 degrees
move 84 steps
turn 45 degrees
move 140 steps
  
```

When leaving your character at the point (0,0) the first thing you should do is locate yourself where you are going to start your drawing and then use the block to lower the pencil.

## Assessment

- The last section of the content pertains to assessments. These are a form of evaluation that helps to analyze the weaknesses and strengths of the students in the concepts taught in the session.
- The student will have a reinforcement on the topics that are required in case he/she wants it.
- BANK questions are reinforcement questions.

Question 6 BK

ARUKAY

## Question #1

Which of the following pictures results from running this algorithm? (each grid line is 20 steps, each diagonal is 28 steps).

when Start clicked

pen down

- move 160 steps
- turn 45 degrees
- move 112 steps
- turn 90 degrees
- move 112 steps
- turn 45 degrees
- move 160 steps
- turn 135 degrees
- move 56 steps
- turn -45 degrees
- move 80 steps

- turn -45 degrees
- move 56 steps
- move -56 steps
- turn 45 degrees
- move -40 steps
- turn -45 degrees
- move 56 steps
- turn -135 degrees
- move 80 steps
- turn -135 degrees
- move 56 steps

FEEDBACK: The correct answer is C, because the drawing starts in the upper left corner and from there the amounts in steps and turns correspond to this drawing.

## Question #2

Which of the following pictures results from running this algorithm? (each grid line is 20 steps, each diagonal is 28 steps).

when Start clicked

pen down

- turn -45 degrees
- move 168 steps
- turn 90 degrees
- move 112 steps
- turn 135 degrees
- move 40 steps
- move -40 steps
- turn -45 degrees
- move 112 steps
- turn 90 degrees
- move 168 steps
- turn -135 degrees
- move 80 steps

FEEDBACK: The correct answer is B, because the drawing starts at the top corner of the queue and from there the amounts in steps and turns correspond to this drawing.

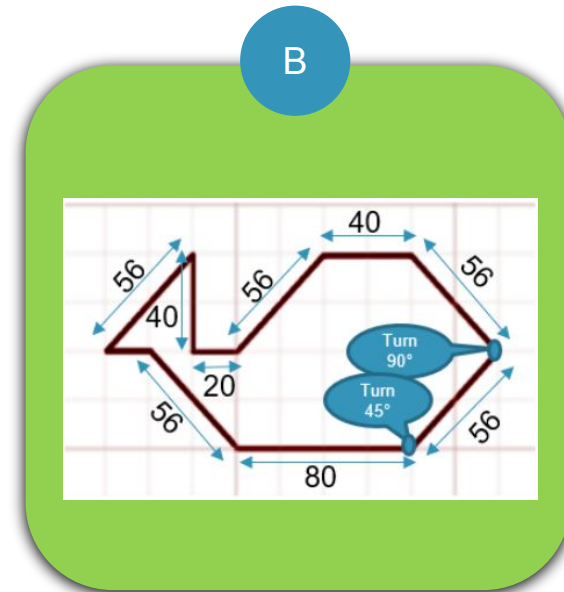

### Question #3

Which of the following pictures results from running this algorithm? (each grid line is 20 steps, each diagonal is 28 steps).

when Start clicked

pen down

- move 80 steps
- turn 45 degrees
- move 56 steps
- turn 90 degrees
- move 56 steps
- turn 45 degrees
- move 40 steps
- turn 45 degrees
- move 56 steps
- turn -45 degrees
- move 20 steps
- turn -90 degrees
- move 40 steps
- turn 135 degrees
- move 56 steps
- turn 135 degrees
- move 20 steps
- turn -45 degrees
- move 56 steps

**FEEDBACK:** The correct answer is B, because the drawing starts in the lower left corner and from there the amounts in steps and turns correspond to this drawing.

## Question #4

Which part of the trident is drawn when running this algorithm? (each grid line is 20 steps, each diagonal is 28 steps).

▶
when Start clicked

pen down

turn
90
degrees

move
140
steps

turn
-90
degrees

move
20
steps

turn
135
degrees

move
42
steps

turn
90
degrees

move
42
steps

turn
135
degrees

move
20
steps

turn
-90
degrees

move
140
steps

FEEDBACK: The correct answer is C, because the drawing starts in the lower right corner of the central leg and from there the amounts in steps and turns correspond to this part of the drawing that is highlighted.

## Question #5

Starting from the gif shown, it can be concluded that this algorithm is the one that is being executed to finish the part that the whale lacks. (each grid line is 20 steps, each diagonal is 28 steps).

<https://firebasestorage.googleapis.com/v0/b/arukay-ls-admin.appspot.com/o/files%2F4WSeA0VQxwbP0cQi0tiM-1638476633029-4?alt=media&token=6b1ee804-4aa4-4925-a4c6-220fb8e26c72>

FEEDBACK: The correct answer is (A) False, because in the gif 5 steps are executed to finish the missing part of the whale and in the algorithm there are only 3 steps. It can also be shown that it is false because the first step that is executed in the gif to finish the whale is to move 56 steps (2 diagonals) and the first step of the image algorithm says "move 120 steps".

## Question #6

From the red arrow, which algorithm should be run to complete the crab's missing claw? (each grid line is 20 steps, each diagonal is 28 steps).

**A**

```

when Start clicked
  pen down
  move 84 steps
  turn -45 degrees
  move 60 steps
  turn -45 degrees
  move 84 steps
  turn -45 degrees
  move 60 steps
  
```

**B**

```

when Start clicked
  pen down
  move 84 steps
  turn 45 degrees
  move 60 steps
  turn 45 degrees
  move 84 steps
  turn 45 degrees
  move 60 steps
  
```

**C**

```

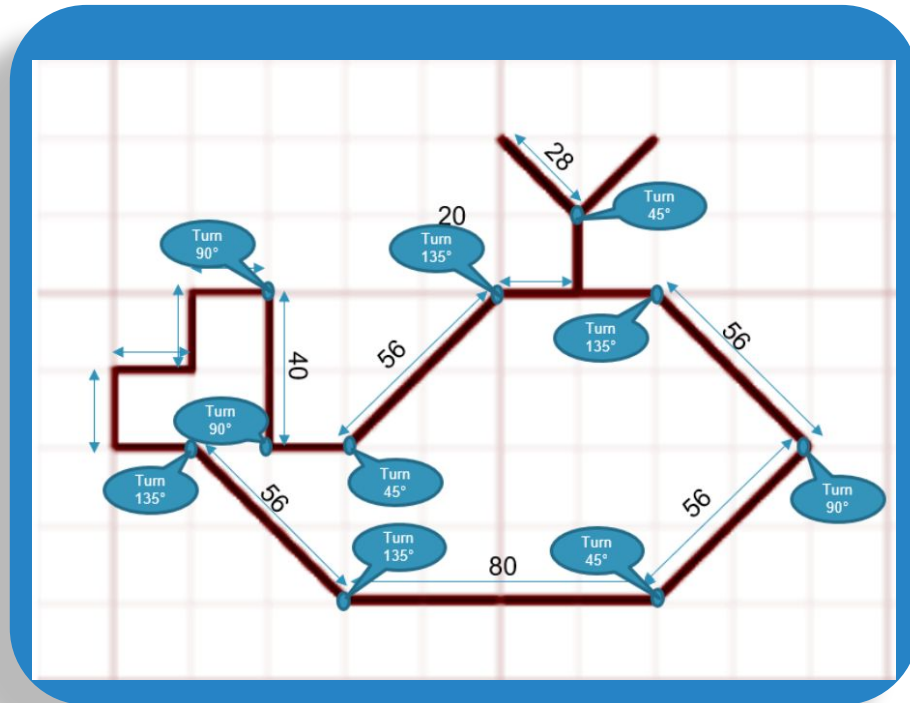

when Start clicked
  pen down
  move 60 steps
  turn -45 degrees
  move 84 steps
  turn -45 degrees
  move 60 steps
  turn -45 degrees
  move 84 steps
  
```

FEEDBACK: The correct answer is A, because from the red arrow the number of steps and the direction of the turns are the ones that correspond to draw the missing pincer.

## Question #8

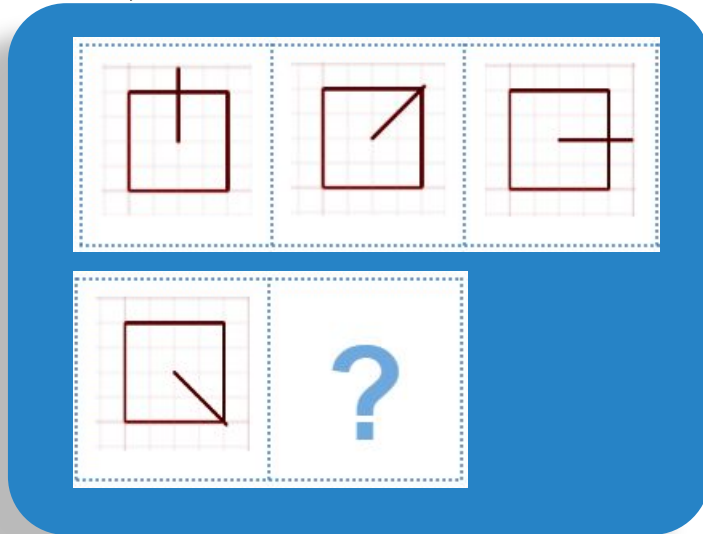

The fewest number of movement blocks and turns to use in the algorithm to draw this fish is \_\_\_\_\_ (each grid line is 20 steps, each diagonal is 28 steps).

FEEDBACK: The correct answer is B (34), because each line represents a move block and each turn point represents a turn block; also at the top should be returned once the next line is started.

## Question #9

Which of the following algorithms draws the next figure in the sequence? (each grid line is 20 steps, each diagonal is 28 steps)

FEEDBACK: The correct answer is C, because the rule of succession is that the internal line is rotating 45° counterclockwise. And the number of steps that the lines measure corresponds to the size of all the figures.

**A**

```

when Start clicked
  pen down
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  pen up
  move 40 steps
  turn 90 degrees
  move 40 steps
  pen down
  turn -270 degrees
  move 60 steps
  
```

**B**

```

when Start clicked
  pen down
  move 120 steps
  turn 90 degrees
  move 120 steps
  turn 90 degrees
  move 120 steps
  turn 90 degrees
  move 120 steps
  turn 90 degrees
  pen up
  move 60 steps
  turn 90 degrees
  move 60 steps
  pen down
  turn -180 degrees
  move 80 steps
  
```

**C**

```

when Start clicked
  pen down
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  move 80 steps
  turn 90 degrees
  pen up
  move 40 steps
  turn 90 degrees
  move 40 steps
  pen down
  turn -180 degrees
  move 60 steps
  
```

## Question #10

Which of the following algorithms draws the next figure in the sequence? (each grid line is 20 steps, each diagonal is 28 steps)

**A**

```
when Start clicked
pen down
turn -90 degrees
move 120 steps
turn 90 degrees
move 120 steps
```

**B**

```
when Start clicked
pen down
turn -90 degrees
move 100 steps
turn 90 degrees
move 100 steps
```

**C**

```
when Start clicked
pen down
move 100 steps
turn 90 degrees
move 100 steps
```

FEEDBACK: The correct answer is B, because the figure is increasing the horizontal and vertical length in a square and the figure rotates 90° counterclockwise, remaining as an L with 100 steps of both horizontal and vertical length.

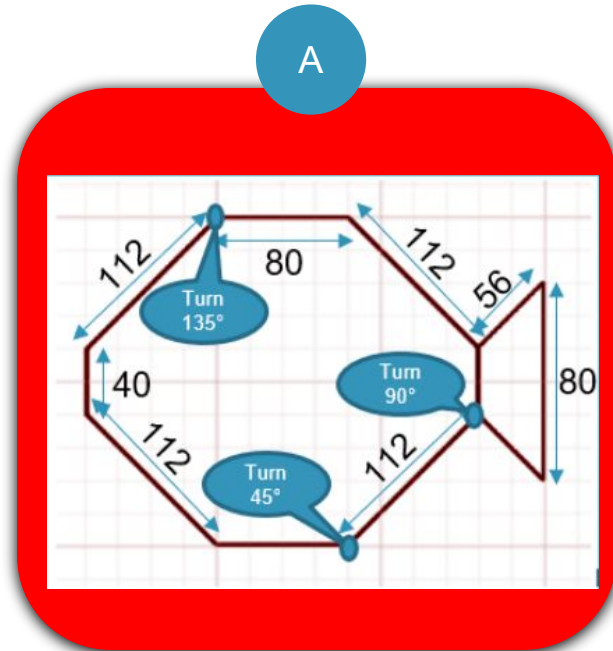

# Question #1 BANK

Which of the following pictures results from running this algorithm? (each grid line is 20 steps, each diagonal is 28 steps)

when Start clicked

pen down

- move 80 steps
- turn -45 degrees
- move 112 steps
- turn 90 degrees
- move 56 steps
- turn -135 degrees
- move 120 steps
- turn -135 degrees
- move 56 steps
- turn 90 degrees
- move 112 steps
- turn -45 degrees
- move 80 steps
- turn -45 degrees
- move 112 steps
- turn -45 degrees
- move 40 steps
- turn -45 degrees
- move 112 steps

FEEDBACK: The correct answer is B, because the drawing starts in the upper left corner and from there the amounts in steps and turns correspond to this drawing.

## Question #2 BANK

From the red arrow, which algorithm should be run to complete the second octopus's missing arm? (each grid line is 20 steps, each diagonal is 28 steps)

**A**

```

when Start clicked
  pen down
  move 60 steps
  turn 90 degrees
  move 40 steps
  turn 45 degrees
  move 40 steps
  turn 135 degrees
  move 40 steps
  turn -90 degrees
  move 60 steps
  
```

**B**

```

when Start clicked
  pen down
  move 84 steps
  turn 45 degrees
  move 28 steps
  turn 90 degrees
  move 20 steps
  turn -135 degrees
  move 28 steps
  turn 90 degrees
  move 56 steps
  
```

**C**

```

when Start clicked
  pen down
  move 84 steps
  turn 90 degrees
  move 28 steps
  turn 45 degrees
  move 20 steps
  turn 135 degrees
  move 28 steps
  turn -90 degrees
  move 56 steps
  
```

**FEEDBACK:** The correct answer is C, because from the red arrow the number of steps and the direction of the turns are the ones that correspond to draw the arm that the second octopus is missing.

### Question #3 BANK

The fewest number of movement blocks and turns to use in the algorithm to draw this fish is \_\_\_\_\_ (each grid line is 20 steps, each diagonal is 28 steps)

A

25

B

22

C

23

FEEDBACK: The correct answer is B (22), because each line represents a move block and each turn point represents a turn block. The drawing must start at the bottom where the fin begins to reduce the number of times it passes through the same side, in the part of the nose it returns once and continues bordering the drawing.

## Question #4 BANK

Which of the following algorithms draws the missing figure in the sequence?

FEEDBACK: The correct answer is A, because the rule of the sequence is that they make 90° turns counterclockwise, so the missing figure is the triangle with the line in the middle at the base.

**A**

```

when Start clicked
  pen down
  move 100 steps
  turn 120 degrees
  move 100 steps
  turn 120 degrees
  move 100 steps
  turn 120 degrees
  move 50 steps
  turn 90 degrees
  move 20 steps
  move -40 steps
  
```

**B**

```

when Start clicked
  pen down
  turn 90 degrees
  move 50 steps
  turn 90 degrees
  move 20 steps
  move -40 steps
  move 20 steps
  turn -90 degrees
  move 50 steps
  turn 120 degrees
  move 100 steps
  turn 120 degrees
  move 100 steps
  
```

**C**

```

when Start clicked
  pen down
  turn 90 degrees
  move 50 steps
  turn 90 degrees
  move 20 steps
  move -40 steps
  move 20 steps
  turn -90 degrees
  move 50 steps
  turn -120 degrees
  move 100 steps
  turn -120 degrees
  move 100 steps
  
```

## Question #5 BANK

Which of the following algorithms draws the next figure in the sequence? (each grid line is 20 steps, each diagonal is 28 steps)

**FEEDBACK:** The correct answer is C, because the rule of succession is that the number of lines increases by two. In the first there is 1 line, in the second image there are 3 lines, in the third image there are 5 lines, so in the fourth image there should be 7 lines.

**A**

```

when Start clicked
pen down
turn 45 degrees
move 112 steps
move -56 steps
turn -90 degrees
move 56 steps
move -112 steps
move 56 steps
turn -45 degrees
move 50 steps
    
```

**B**

```

when Start clicked
pen down
turn 45 degrees
move 112 steps
move -56 steps
turn -90 degrees
move 56 steps
move -112 steps
move 56 steps
turn -45 degrees
move 50 steps
move -50 steps
turn 90 degrees
move 50 steps
move -100 steps
move 50 steps
turn 90 degrees
move 50 steps
    
```

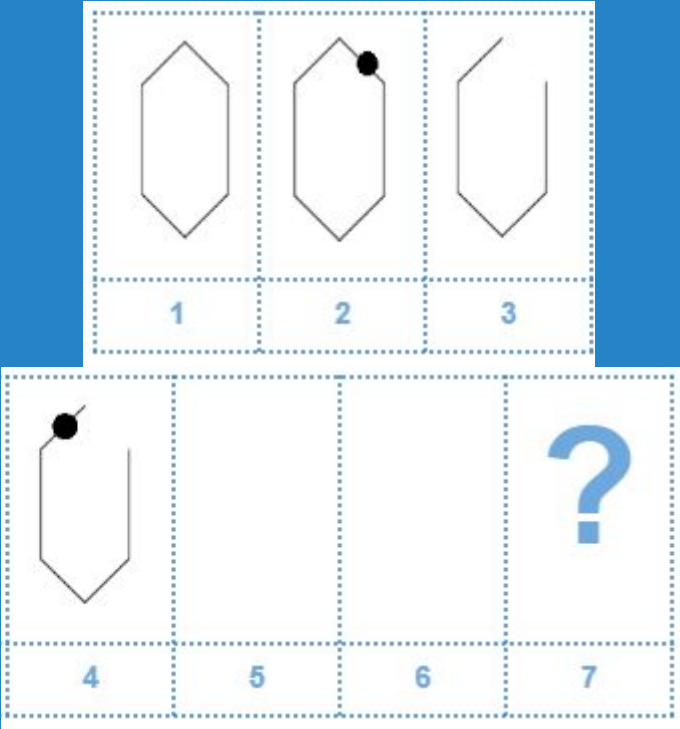

**C**

```

when Start clicked
pen down
turn 45 degrees
move 112 steps
move -56 steps
turn -90 degrees
move 56 steps
move -112 steps
move 56 steps
turn -45 degrees
move 50 steps
move -50 steps
turn 90 degrees
move 50 steps
move -100 steps
    
```

## Question #6 BANK

Which of the following algorithms draws the figure that should go in the seventh position?  
(each grid line is 20 steps, each diagonal is 28 steps)

**A**

```

when Start clicked
pen down
turn 45 degrees
move 56 steps
turn 45 degrees
move 100 steps
turn 45 degrees
move 56 steps
turn 90 degrees
move 56 steps
turn 45 degrees
move 100 steps
turn 45 degrees
move 56 steps
  
```

**B**

```

when Start clicked
pen down
turn -45 degrees
move 56 steps
turn 90 degrees
move 56 steps
turn 45 degrees
move 100 steps
  
```

**C**

```

when Start clicked
pen down
turn -45 degrees
move 56 steps
turn 90 degrees
move 56 steps
turn 45 degrees
move 100 steps
turn 45 degrees
move 56 steps
  
```

**FEEDBACK:** The correct answer is B, because the rule of succession is that the point moves counterclockwise and each line it touches is erased; so in the seventh position there should only be 3 lines, the two from the bottom and the one from the right side.

## Glossary

- Sequencing: Sequencing is a series of ordered events that perform or specify a task or activity. E.g. A cooking recipe, programming code.
- Programming Blocks: Programming blocks are internal functions that perform a specific task, i.e., within a block is a function performed in a scripting language such as (Java, Python, etc).
- Movement blocks: Functions designed to move the character in the console, either linearly (horizontally and vertically) or diagonally.
- Pencil blocks: Functions intended to allow the user to draw on the screen using the character.
- Work area: Special place to drag the programming blocks and perform various sequences according to the requirement or activity to be performed.
- Testing: Evaluating the operation of a programming sequence in order to find possible bugs or errors.
- Bug: Term used in programming to refer to an error in the operation of a technological product that was developed with programming code.
