

## NISSAN/INFINITI RE5R05A

### VALVE BODY IDENTIFICATION

The RE5R05A is the Nissan/Infiniti five speed rear drive transmission used in the Infiniti CX35, FX35, FX45, G35, M35, M35x, M45, Q45, and QX56. It is also used in Nissan 350Z, Frontier, Pathfinder, Armada, Titan and Xterra XE models. This transmission has been on the road in North America since the 2002 model year.

As a result this transmission is a common sight in many shops, however the information that is available from the O.E.M. is mostly incomplete, especially when it comes to valve body information such as small parts and checkball locations as well as valve nomenclature.

There is also confusion in checkball location and valve lineup because there is a difference between the 1st and 2nd Design valve bodies. 1st design includes models from 2002 - early 2004 and 2nd design includes from Mid 2004 to the present. Note: there is a 3rd design valve body that has a difference in the Neutral Reverse Accumulator that is unclear when it was introduced at the time of this printing.

The following information will illustrate both the late and early valve body information so badly needed in our industry.
