## **FORD 5R110W FLUID OUT THE VENT**

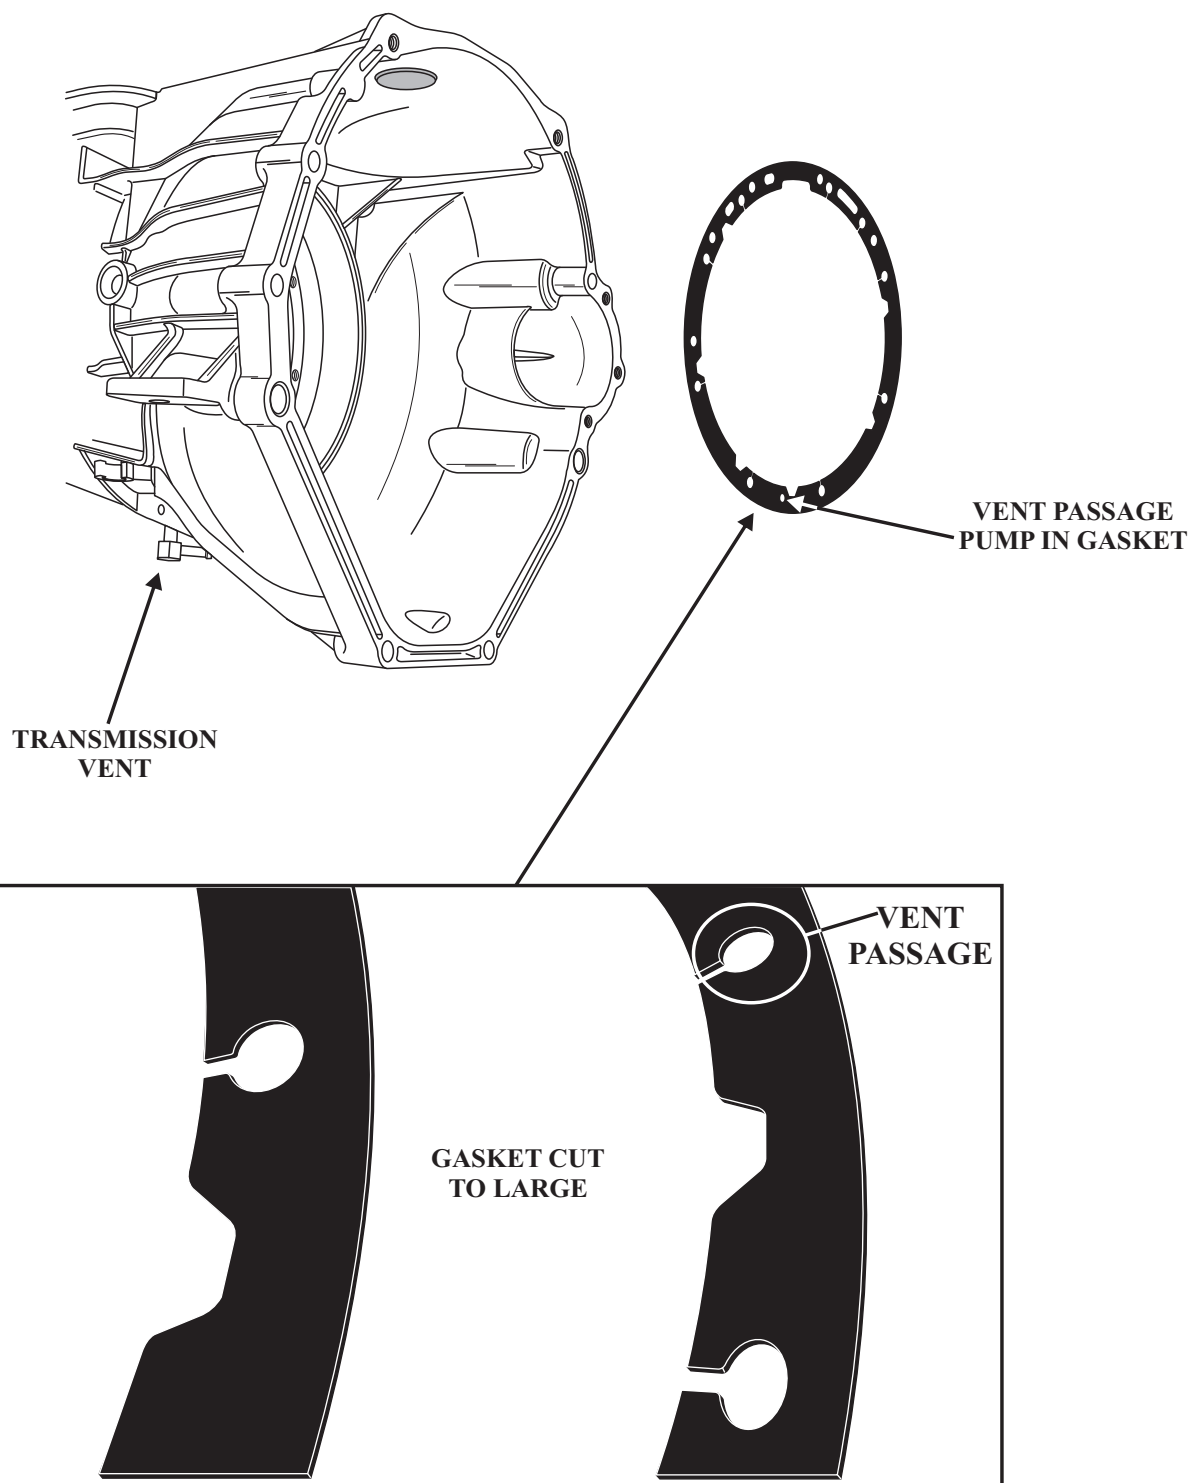

**COMPLAINT:** A Ford truck equipped with a 5R110W transmission has a complaint of transmission fluid forced out of the vent. This an after overhaul condition.

**CAUSE:** Some transmission overhaul kits may contain pump assembly to case gaskets that have been incorrectly cut, Refer to Figure 1. The pump passage identification shown in Figure 2 illustrates how the improperly fitting pump gaskets cause fluid to leak out of the transmission vent.

**CORRECTION:** Be sure to place the pump gasket on the pump and case surface to insure the gasket aligns properly.

*Many thanks to Max at King Transmission for sharing his experience with ATSG that made this bulletin possible.*
