

Technical Service Information

DODGE 66RFE CLUTCH NOISE

COMPLAINT: A Dodge truck equipped with the 66RFE transmission has an after overhaul complaint of a clutch noise during a 6-4, 4-3 and 3-2 down shift.

CAUSE: Friction material compatibility issue between the friction plates and the steel plates.

CORRECTION: Replace the friction and steel plates with the updated clutch kit from an FCA dealer. The clutch kit consists of the reverse, underdrive and overdrive friction and steel plates as shown in figure 1.

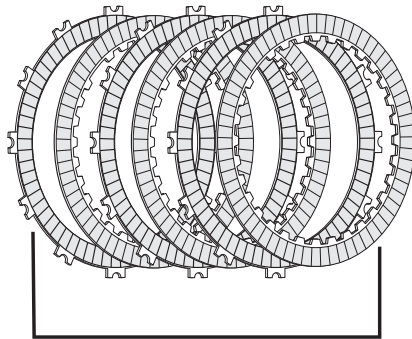

SERVICE INFORMATION:
