

- The everyday hygiene for taps - PREMIX

The everyday tap cleaning is most useful before the closing hour
We recommend the cleaning set for Coca Cola taps

Coca-Cola Premix: working steps for tap cleaning

Prepare the cleaning concentrate for the spray flask according to the instructions on the flask

Please clean the taps with the cleaning spray-flask and the brush and rinse with the cleaning ball filled with clean water. Do not suck back the rinsing water into the cleaning ball

Do also clean the drip pan, dispenser column and the surrounding. Pay attention that there are no residues of cleaning compound left on the taps prior to start using them, and also to the cleanliness of the cleaning devices. Enter the cleaning activity into a cleaning schedule.

Hygiene also when changing the container

When connecting new containers, it is important to clean the plug-on valve, the KEG or the Bag in Box connection.

Usually it is sufficient to use clean warm water for cleaning.

With this easy manipulation you will save the product from deterioration.

You avoid operating trouble and the connections are easier to join.

This is the only way to ensure the kind of hygiene your customers are expecting.
