

Cereal City Science to Offer **September** K-5 and Middle School NGSS Unit Kit Trainings for **FREE**

Thanks to a generous grant from MiSTEM/GVSU and the STEM Curriculum Digital Transformation Project, Cereal City Science is now able to offer our NGSS-aligned Kit Trainings **taking place in the month of September** for FREE for K-5 and Middle School teachers. It is strongly encouraged that teachers register and attend virtual training to experience the use of technology to promote collaboration in an online classroom. Registered teachers who may not be able to attend the live training can view the training any time as a recording (Registration required).

The online workshops are designed to prepare teachers for a **successful implementation of the Cereal City Science Units in the classroom as well as synchronous online learning**, if needed. Each CCS unit will be introduced in a 6-hour online training session focused on teaching strategies associated with specific curriculum content of the grade level kit.

Teachers explore investigations and activities developed to engage students in the practices that help students figure out phenomena as they develop content knowledge. In addition, the **newly developed online tools** that help support blended learning will be introduced and integrated into the workshop. Curriculum training will focus on the first three activities for each unit.

We anticipate high interest in these training workshops, please register using the attached registration form. **Registrations must be received** no later than two days before the desired workshop in order to take advantage of this free opportunity.

Cereal City Science Unit/Kit Curriculum Training (Online Training)

These one-day workshops will prepare teachers to implement the Cereal City Science Units in the classroom as well as synchronous online learning, if needed. A CCS unit will be introduced in a 6-hour online training session focused on teaching strategies associated with specific curriculum content of the grade level kit. Teachers will explore investigations and activities developed to engage their students in the practices that help them figure out phenomena and develop content knowledge. In addition, the online tools that Cereal City Science has developed to help support blended learning will be explored. Curriculum training will focus on the first three activities for each unit.
