#### **1.INTRODUCTION**

CHRIST(Deemed to be University) blossomed out of the educational vision of the Carmelites of Mary Immaculate (CMI) congregation founded by St Kuriakose Elias Chavara. He was a visionary, an educationist and a social reformer of the nineteenth century who founded the Congregation in 1831 in South India.

CHRIST(Deemed to be University) was established in July 1969 as Christ College. It was the first institution in Karnataka to be accredited by the National Assessment and Accreditation Council (NAAC). University Grants Commission (UGC) conferred Autonomy to the institution in 2004. It became the first College in South India to be reaccredited with A+ by NAAC in 2005. UGC identified it as an Institution with Potential for Excellence in 2006.Under Section 3 of the UGC Act, 1956, Ministry of Human Resources Development of the Union Government of India, vide Notification No. F. 9-34/2007-U.3 (A), declared Christ College as a Deemed to be University, in the name and style of CHRIST(Deemed to be University)in July 2008. The CHRIST was accredited with 'A' Grade by NAAC in 2016.

CHRIST(Deemed to be University)offers 46 Bachelor, 47 Master, 16 MPhil and 17 PhD Programs in Humanities, Social Sciences, Sciences, Commerce and Management, Education, Law and Engineering. The Institution which celebrates diversity has students from all the states of India and 58 countries across the globe.

CHRIST(Deemed to be University)rooted in Gospel values, is committed to provide holistic education through the development of intellectual competence, personal skills, interpersonal skills and societal skills. CHRIST welcomes to its fold students from all over the country and the world in an environment of religious harmony and secularism.

#### VISION

#### "EXCELLENCE AND SERVICE"

- CHRIST(Deemed to be University), a premier educational institution, is an academic fraternity of individuals dedicated to the motto of excellence and service. We strive to reach out to the star of perfection through an earnest academic pursuit for excellence and our efforts blossom into 'service' through our creative and empathetic involvement in the society to transform it.
- Education prepares one to face the challenges of life by bringing out the best in him/her. If this is well accepted, education should be relevant to the needs of the time and address the problems of the day. Being inspired by Blessed Kuriakose Elias Chavara, the founder of Carmelites of Mary Immaculate and the pioneer in innovative education, CHRIST(Deemed to be University) was proactive to define and redefine its mission and strategies reading the signs of the time.

#### MISSION STATEMENT

"CHRIST(Deemed to be University) is a nurturing ground for an individual's holistic development to make effective contribution to the society in a dynamic environment."

#### CORE VALUES

The values which guide us at CHRIST(Deemed to be University) are:

#### Faith in God Moral Uprightness Love of Fellow Beings Social Responsibility Pursuit of Excellence

#### **Department Vision**

#### "To fortify Ethical Computational Excellence"

#### **Department Mission**

- Imparts core and contemporary knowledge in the areas of Computation and Information Technology
- 2. Promotes the culture of research and facilitates higher studies
- 3. Acquaints the students with the latest industrial practices, team building and entrepreneurship
- 4. Sensitizes the students to serve for environmental, social & ethical needs of society through lifelong learning.

#### **GRADUATE ATTRIBUTE**

- Ability to comprehend the problem in a specific domain and implementation of the solution in an ethical way.
- Ability to use skilled communication to enhance understanding and work in a team to contribute positively with an international perspective
- Ability to exhibit skills in research and enquiry based learning to identify and creatively tackle problems.
- Ability to execute a team project in the specific domain after going through the process of understanding, analyzing, designing, implementing and testing with real time data.
- Ability to execute a solution based for social cause.

#### 2. .<u>PROGRAMMES OFFERED</u>

- <u>Undergraduate Programmes(B.Tech, 8 Semester Program</u>)
  - Bachelor of Technology in Automobile Engineering (AE)
  - Bachelor of Technology in Civil Engineering( CIVIL)
  - Bachelor of Technology in Computer Science and Engineering (CSE)
  - Bachelor of Technology in Electronics and Communication Engineering (ECE)
  - Bachelor of Technology in Electrical and Electronics Engineering (EEE)
  - Bachelor of Technology in Information Technology (IT)
  - Bachelor of Technology in Mechanical Engineering (ME)
- **<u>Postgraduate Programmes(M. Tech, 4 Semester Program)</u>** 
  - Master of Technology in Computer Science and Engineering (CSE)
  - Master of Technology in Communication Systems(ECE)
  - Master of Technology in Information Technology(Data Analytics)
  - Master of Technology in Machine Design(MD)
  - Master of Technology in Power Systems(PS)
  - Master of Technology in Structural Engineering(SE)
- Doctoral Programmes (Ph.D.)(Doctor of Philosophy)
  - Doctor of Philosophy (Ph.D.) in Computer Science and Engineering
  - Doctor of Philosophy (Ph.D.) in Electronics and Communication Engineering

- Doctor of Philosophy (Ph.D.) in Civil Engineering
- Doctor of Philosophy (Ph.D.) in Electrical and Electronics Engineering
  - Doctor of Philosophy (Ph.D.) in Mechanical Engineering

#### - Doctor of Philosophy (Ph.D.) in Information

Technology

#### 03. ELIGIBILITY CRITERIA

#### For Undergraduate Programmes

A pass in PUC (10+2) or equivalent with 50% marks in aggregate with Mathematics, Physics and Chemistry is the minimum eligibility for admission.

#### Lateral Entry:

Candidates who have successfully completed 3 year diploma in Engineering are eligible to apply for lateral entry into:

- Automobile Engineering (AE)
- B.Tech Civil Engineering (CE)
- B.Tech Mechanical Engineering (ME)
- B.Tech Computer Science and Engineering (CSE)
- B.Tech Electronics & Communication Engineering (ECE)
- B.Tech Electrical and Electronics Engineering (EEE)
- B.Tech Information Technology (IT)

Candidates will be admitted to second year of the programme only after appearing the CHRIST(Deemed to be University)selection process for Engineering programmes.

#### \* For Postgraduate Programmes:

- $\circ$   $\;$  For Master of Technology in Computer Science and Engineering
  - A Pass in B.Tech/B.E or M.Sc with 55% aggregate.
- For Master of Technology in Communication Systems
  - A Pass in B.Tech/B.E or M.Sc in Electronics and VLSI Design with 55% aggregate.
  - For Master of Technology in Civil Engineering
    - A Pass in BE/B.Tech or M.Sc in Civil and VLSI Design with 55% aggregate.
- For Master of Technology in Mechanical Engineering
  - A Pass in BE/B.Tech with 55% aggregate.
- For Master of Technology in Information Technology (Data Analytics)
  - A Pass in B.Tech/B.E or M.Sc with 55% aggregate.

#### **\*** <u>For Doctoral Programmes (Ph.D.):</u>

- A pass with 55% marks in post graduation and equivalent in the relevant subject from any recognized university.
- A research proposal (Maximum 1500 words) has to be submitted along with the application.

#### 4. <u>SELECTION PROCESS</u>

0

1) Candidates can process the admission based on the Undergraduate Entrance Test and Ranking by COMEDK.

Process	Particulars	Date	Venue/Centre
Entrance Test	CHRIST(Deemed to be University)Entrance test for each candidate	-	As per the E- Admit Card
Personal Interview	Personal interview for 15 minutes for each candidate by an expert panel	1	As per the E- Admit Card
Academic Performance	Assessment of past performance in Class 10, Class 11/12 during the Personal Interview	As per the E-Admit Card	As per the E- Admit Card

OR 2) CHRIST(Deemed to be University) Selection Process as given below:

#### 5. <u>ADMISSION PROCESS</u>

Candidates will be intimated about the Selection status (Selected/Wait Listed/Not Selected) through the University Notice Board/on the "Application Status" link on University website. The Selection results will be declared within 24 hours of Personal Interview session.

The selected candidates must process admission at Office of Admissions, Central Block, CHRIST(Deemed to be University) within 3 working days of declaration of Selection Process results/as per the stipulated date and time mentioned by Office of Admissions.

Selected candidates should collect the Fee Challan from the Office of Admissions and remit the Annual fee at the South Indian Bank, CHRIST(Deemed to be University) Branch. The Offer of Admission will stand cancelled, if failing to remit the fee within the stipulated date and time.

Admission will not be processed <u>without the presence of the candidate</u> and the <u>mandatory original documents</u> mentioned below;

1. The Offer of Admission Card (E-Admission Card/Mail)

2. Class 10 Marks Statement

3. Class 11 Marks Statement, if Candidate is pursuing class 12 and appearing for final examination during March-April Month

4. Class 12 Marks Statement, if candidate has appeared and passed the Class 12 examination

The Institution ID card is a smart card, which is both an ID card as well as a South Indian Bank ATM card with a chip containing the student personal details. All transactions within the University campus after commencement of classes, including fees payment will be processed only through this card. It is also an access card for Library and other restricted places. Candidates are advised to collect the South Indian Bank account opening form along with fees challan and process it at the Bank branch within the Institution premises. Candidates who fall under International student category (ISC), If selected, should register with the Foreigner Regional Registration Officer (FRRO/FRO) of the Local Police in Bangalore, India within 14 working days from the date of admission or arriving in Bangalore.

All International student category (ISC) candidates if studied in India should obtain an NOC from the previous qualifying institution.

#### 6. <u>GENERAL RULES</u>

- There is a grading scheme for each paper and for all the courses.
- All marks will indicate the marks, percentage obtained, grade and grade point average.
- The grade point average will be calculated as follows: for each subject, multiply the grade point with the number of credits; divide the sum of product by the total number of credits.
- The CGPA [Cumulative GPA] is calculated by adding the total number of earned points [GP x Cr] for all semesters and dividing by the total number of credit hours for all semesters.

$$GPA = \frac{\sum [GPA \times Cr] \sum [GPA \times Cr]}{\sum Cr}$$

#### Grade Point-10 Class Percentage Grade Grade Interpretation **Point-**4 **Point Scale** Point Scale 80 and A+ 4.0 10.00 Excellent First Class with above Distinction 75-79 3.75 9.38 Very Good А 70-74 3.5 8.75 Good A-65-69 B+ 3.0 7.50 Good First Class 60-64 В 2.5 6.25 Above Average 55-59 C+ 2.0 5.00 Average Second Class С 1.5 3.75 50-54 Satisfactory <u>C-</u> 40-49 1.0 2.50 Exempted if aggregate is more Pass Class than 50% 39 and F 0 Fails 0 Fail below

#### 7. <u>GRADING SCHEME FOR EACH PAPER: POSTGRADUATE COURSES</u>

1. Students has to score minimum 40% in ESE, 40% in both CIA + ESE to pass in a course. 2. Students has to secure 50% aggregate to secure a pass in the semester

M.Tech -IT(2020-2022)

#### **8. BRIEF HISTORY OF DEPARTMENT**

Department of Computer Science and Engineering started of journey in the year 2009 to produce qualified Engineers for the society with variety of skills. The department offers the following degrees Bachelor of Technology, Master of Technology, and Doctor of Philosophy in the areas of Computer Science and Engineering and Information Technology. Over the decade the department has inducted faculties to collectively pooled resources who can train the students in Artificial Intelligence, Machine learning, Computer Vision, Algorithms design, Cryptography, Computer Networking, Data mining, Data science, BIG DATA, Digital Image Processing, text mining, knowledge representation, soft computing, Cloud computing, etc.. The department from its inception has been keen on setting up labs for the students at present the labs infrastructure for the students are Tannenbaum lab, High Performance computing Lab, Bring your Own Device lab, Machine learning lab, CISCO Networking Lab, Red Hat Linux lab, specifically, for the students to be prepared for the lab curriculum and their research.

The department periodically conducts hands-on workshop on recent technology like Internet of Things, Cloud computing, Machine learning so that the students are connected with current and technologies. The department imparts teaching in Holistic method, where students who are trained under holistic education will be better citizens of Nation. The main educational goal is to prepare students for research and career in industry or in universities.

#### 9. PROGRAMME OVERVIEW

The two year Post graduate program M. Tech in Information Technology started in 2011. The course was started mainly to cater to the increasing demand for higher studies in the country. A growing intake with students from across the nation shows the popularity of the program.

The Department strives to give skills essential to practicing engineering professionals; it is also an objective to provide experience in leadership, management, planning, and organization. The department understands its role in developing and evaluating methods that encourage students to continue to learn after leaving the university. We believe that the student opportunities and experiences should lead to an appreciation of the holistic development of individual. We also try to pass to our students our passion for what we do, and to have the students comprehend that we also desire to continue to learn.

#### **10. PROGRAMME OBJECTIVE**

The Post graduate program aims to offer advanced knowledge in specific areas. Focus on research is a special feature of our program, in CHRIST(Deemed to be University) Faculty of Engineering where students are encouraged to undertake research level projects and have mandatory publications in national level conferences. Specific subjects for industry level skills are also offered for better employability.

#### **<u>11. TEACHING PEDAGOGY</u>**

- Team/Class room teaching.
- PowerPoint presentations and handouts.

- Simulated situations and role-plays.
- Video films on actual situations.
- Assignments.
- Case Studies.
- Exercises are solved hands on.
- Seminars
- Industry / Field visits.
- Information and Communication Technology.
- Project work.
- Learning Management System- Moodle

#### 12. ASSESSMENT RULES AND DETAILS OF CIA (Continuous Internal Assessment):

Assessment is based on the performance of the student throughout the semester.

#### Assessment of each paper

- Continuous Internal Assessment (CIA) for Theory papers: 50% (50 marks out of 100 marks)
- End Semester Examination(ESE) : 50% (50 marks out of 100 marks)

#### Components of the CIA

CIA I : Mid Semester Examination (Theory)	: 25 marks			
CIA II : Assignments	: 10 marks			
CIA III : Quizzes/Seminar/Case Studies/Project Work	: 10 marks			
Attendance	: 05 marks			
Total	: 50 marks			
For subjects having practical as part of the subject				
End compositor properties a superingtion	marte			

Total	: 50 marks
Class work	: 10 marks
Mid semester examination	: 10 marks
Records	: 05 marks
End semester practical examination	: 25 marks

Mid semester practical examination will be conducted during regular practical hour with prior intimation to all candidates. End semester practical examination will have two examiners an internal and external examiner.

Assessment of Project Work(Phase-II) and Dissertation
 Continuous Internal Assessment:100 Marks

- Presentation assessed by Panel Members
- Assessed by Guide
- End Semester Examination:100 Marks
  - ♦ Viva Voce
  - Demonstration
  - Project Report
- Dissertation (Exclusive assessment of Project Report): 100 Marks

#### Assessment of Internship (M.Tech)

All students should complete internship before 3<sup>rd</sup> semester. This component carries 2 credits.

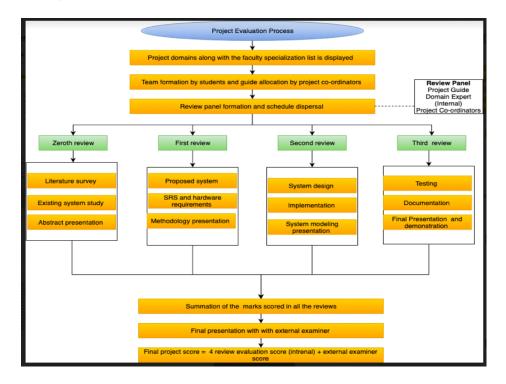

- Continuous Internal Assessment:2 credits
  - Presentation assessed by Panel Members

#### **PROJECT EVALUATION**

The project work carries a total marks of 200 out of which 100 marks is CIA and 100 marks is allotted for ESE. The following process is carried for continuous monitoring and evaluation of the student project work.

- Once the supervisors are allotted to the students, the students have to regularly meet the project supervisor.
- On project days, the project coordinator takes attendance at three slots and the students have to maintain a notebook to record the activities done during that day and get it signed by the supervisor.
- Within one month of the beginning of the eighth semester, a zeroth review will be conducted where students need to present their findings based on literature survey to the panel members which will consist of the supervisor, project coordinator and faculty experts. Only if the panel members accept the project to be considered as a final year project, it can be carried out otherwise the student group will be given two weeks to modify their idea and present again.
- One review in front of the panel consisting of supervisor, project coordinator and faculty experts will be conducted every month thus resulting in 3 reviews including the zeroth review. The students shall prepare a PowerPoint presentation and present it to the panel. Each review will be awarded marks and will be considered for final CIA evaluation. The guide lines for preparing the power point slides are issued to the students by the project coordinator.
- The third review will be considered as the final review and a model presentation for the external viva-voce presentation of the project so that students are ready.
- Following process is adopted for project report finalizing
  - The Deanery has adopted a latex template for preparing the Project thesis report. Special one day training on latex and how to use the template will be given to the students by the faculty members.
  - The project report approved by the guide will then be sent to the project coordinator by the respective guides.
  - The project reports received by the project coordinator will then be forwarded to two internal reviewers for reviewing the report.
  - The student has to incorporate the changes mentioned by the reviewers and the modified report will be sent by the respective guides to the project coordinator and only on the final approval from the project coordinator, the students can go ahead with the hard binding of the reports.

- The hard bound reports will then be signed by all the students, guide, head of the department, Dean and the external examiner.
- An end semester project viva voce is conducted with the panel of internal and external examiners. The external examiner from other institution / university is appointed by the controller of examinations

The project evaluation process is shown below:

#### Process to assess individual and team performance

- Project group size varies from 2 to 4 members. The groups are formed by the students based on their area of interest.
- Thus students should be assessed both individually as well as in a team. For this, the department follows a process of reviews where the students will present for three times in front of the same panel members starting from the zeroth review.
- This will have continuity and the faculty members assess individual performance as well as team performance.
- A rubric is also formed for the project work which clearly mentions the criteria for assessing individual performance thus making the students aware of what they need to do in the beginning of the semester itself.

A sample review evaluation sheet is shown below where students are assessed individually based on their performance in the review presentation

Below diagram shows the individual and team assessment through a rubric:

Dimension	Score 1	Score 2	Score 3	Score 4
1. Contribution to the team project/work	<ul> <li>Does not collect any relevant information</li> <li>No useful suggestions to address team's needs</li> </ul>	<ul> <li>Collects information when prodded</li> <li>Tries to offer some ideas, but not well developed and/or clearly expressed to meet team's needs</li> </ul>	<ul> <li>Collects basic, useful information related to the project</li> <li>Occasionally offers useful ideas to meet the team's needs</li> </ul>	<ul> <li>Collects and presents to the team a great deal of relevant information</li> <li>Offers well-developed and clearly expressed ideas directly related to the group's purpose</li> </ul>
2. Taking responsibility	<ul> <li>Does not perform assigned tasks</li> <li>Often misses meetings and, when present, does not have anything constructive to say</li> <li>Relies on others to do the work</li> </ul>	<ul> <li>Performs assigned tasks but needs many reminders</li> <li>Attends meetings regularly but generally does not say anything constructive</li> <li>Sometimes expects others to do his/her work</li> </ul>	<ul> <li>Performs all assigned tasks</li> <li>Attends meetings regularly and usually participates effectively</li> <li>Generally reliable</li> </ul>	<ul> <li>Performs all tasks very effectively</li> <li>Attends all meetings and participates enthusiastically</li> <li>Very reliable.</li> </ul>
3. Valuing other team members and quality of interactions	<ul> <li>Often argues with team mates</li> <li>Doesn't let anyone else talk</li> <li>Occasional personal attacks and "put-downs"</li> <li>Wants to have things done his/her way and/or does not listen to alternate approaches</li> </ul>	<ul> <li>Usually does much of the talking</li> <li>Does not pay much attention when others talk</li> <li>Often assumes others' ideas will not work</li> <li>No personal attacks and put-downs but sometimes patronizing</li> </ul>	<ul> <li>Generally listens to others' points of view</li> <li>Always uses appropriate and respectful language</li> <li>Tries to make a definite effort to understand others' ideas</li> </ul>	<ul> <li>Always listens to others and their ideas</li> <li>Helps them develop their ideas while giving them full credit</li> <li>Always helps the team reach a fair decision</li> </ul>

#### **13. QUESTION PAPER PATTERN:**

#### End Semester Examination (ESE) :

Theory Papers:

The ESE is conducted for 100 marks of 3 hours duration.

The syllabus for the theory papers is divided into FIVE units and each unit carries equal weight age in terms of marks distribution.

Question paper pattern is as follows.

Two full questions with either or choice, will be drawn from each unit. Each question carries 20 marks. There could be a maximum of three sub divisions in a question. The emphasis on the questions is broadly based on the following criteria:

50 % - To test the objectiveness of the concept

30 % - To test the analytical skill of the concept

20 % - To test the application skill of the concept

Laboratory / Practical Papers:

The ESE is conducted for 50 marks of 3 hours duration. Writing, Execution and Viva – voce will carry weightage of 20, 20 and 10 respectively.

#### Mid Semester Examination (MSE) :

Theory Papers:

The MSE is conducted for 50 marks of 2 hours duration.

Question paper pattern; Five out of Six questions have to be answered. Each question carries 10 marks.

Laboratory / Practical Papers:

The MSE is conducted for 50 marks of 2 hours duration. Writing, Execution and Viva – voce will carry weightage of 20, 20 and 10 respectively.

Holistic Education:			
End Semester Examination	25 Marks		
Participation	25 Marks		

#### 50 Marks

# Total

#### 14. CURRICULUM DESIGN PROCESS

CHRIST (Deemed to be University), a premier educational institution, is an academic fraternity of individuals dedicated to the motto of "Excellence and Service".

- Department of Computer Science and Engineering is under the deanery of Faculty of Engineering of CHRIST (Deemed to be University).
- The department offers B. Tech in Computer Science and Engineering program whose curriculum should be approved by the Board of Studies (BoS) and University Academic Council (AC).

The University has laid down a regulation for Curriculum design, review and Approval which is as below:

Board of Studies is the primary academic body responsible for initiating all or any proposal concerning academic matters of the University including but not limited to

- Program structure
- Development and review of curriculum
- Syllabus
- Question paper pattern
- Question paper standards
- Examination systems
- Internal assessments
- Student development
- Teaching methodology
- Pedagogy
- Appointment of examiners
- Introduction of new programs/courses etc.
- 1. There shall be one Board of Studies (BoS) for each academic department of the University.
- 2. The Board of Studies of each department shall consist of:
  - a. Dean of Faculty/Head of the Department Chairperson.
  - b. All Professors, Associate Professors, and Assistant Professors of the department.
  - c. Two members from teaching profession (outside the University) of the specialization not below the rank of Associate Professor, nominated with the approval of the Academic Council.
  - d. Up to two members from the Industry / Entrepreneurs, nominated with the approval of the Academic council.
  - e. Chairperson may nominate one of the faculty members of the department to be the Secretary of Board of Studies.
- 3. The term of the nominated members shall be two years and they are eligible for re-nomination.
- 4. Meeting of Board of Studies may be convened as and when needed but shall be held at least once in a year.
- 5. The quorum for the meeting of Board of Studies shall be two-third of the total membership of the Board of Studies of the Department.
- 6. The functions of Board of Studies are:

- a. Preparation of syllabi for various program keeping in view the objectives of the program, interest of the stakeholders, and the level of knowledge expected of the subject. The syllabus must be as detailed as possible with breakup of topics and sub topics to enable meaningful preparation of course plan, and propose up-to-date suggested reading and reference books/material with author and publisher information.
- b. Review of curriculum periodically for updating and revision according to changes in theory and practices from time to time.
- c. Suggest innovative teaching practices and evaluation methods.
- d. Suggest procedure for continuous internal assessment of students.
- e. Recommend panel of examiners for approval by the Academic Council.
- f. Propose introduction of new undergraduate, postgraduate and predoctoral, Doctoral, Diploma and Certificate program along with details of program structure, curriculum, and duration, for consideration by the Academic Council.
- g. Coordinate research, teaching, extension and other academic activities relating to the department.
- h. Suggest panel of experts to be nominated to the Board of Studies.
- i. Suggest co-curricular activities for student development including holistic education materials.
- j. Suggest value-added program for improving the quality standard of the students.
- k. Suggest methods of enhancing quality of teaching and teacher training program.
- 1. Review and suggest ways to enhance the quality and quantity of research and publications by students and faculty.
- m. Review and suggest modes of increasing external research projects and consultancies.
- n. Review and suggest measures to improve the quality of Refresher Courses, Quality Improvement Program (QIP), Seminars, Conferences, and Workshops relating to the Department.
- o. The Academic Council may direct any other functions, as it may deem necessary

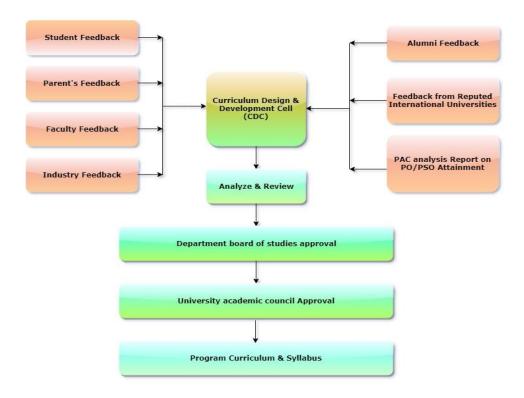

Figure 1 : Flow Chart for Curriculum Design Process

The Department of Computer Science and Engineering follows the following process for curriculum design:

- 1. The Head of the Department (HoD) in consultation with the Department Advisory Committee (DAC) nominates a BOS in-charge for the department.
- 2. In consultation with the BOS in-charge, the HoD formulates a Curriculum Design & Development Cell for the department (CDC). The CDC consists of professors, senior teachers with the HoD as the chairperson. The objective of the CDC is to review the curriculum and suggest recommendations every year to the BOS.
- 3. Meeting of the CDC Members may be convened as and when needed but should be held at least thrice in a year.
- 4. The CDC members will consolidate the feedback collected from all the stakeholders including students, faculty members, parents, alumni, employers, syllabus of reputed international universities and the entire course exit surveys collected in an academic year and analyze the feedbacks.
- 5. In consultation with Program Coordinator, HoD will formulate Program Assessment committee (PAC). PAC consists Program Coordinator, Domain Expert for each domain of Courses, two Associate professors and two assistant professor as its members and Program coordinator will be chair person.
- 6. The Program Assessment Committee (PAC) analyses the results which includes both direct and indirect assessment and submits a report which includes either an action plan in case of non PO/PSO attainment or a target increment in case of PO/PSO attainment to the CDC for their review. Analysis is done for attaining the PO/PSO's through the curriculum.
- 7. The CDC members then review the analysis of the PAC as well as review the feedbacks collected on the curriculum from the various stakeholders and provide their recommendations to the BOS on HOD's approval.
- 8. On the approval of the Board of Studies, the final approval of the curriculum is done by the academic council of the University.

# State the process used to identify extent of compliance of the curriculum for attaining the Program Outcomes and Program Specific Outcomes

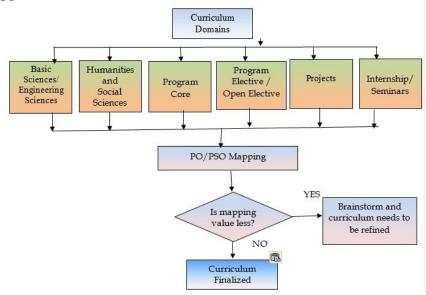

The following steps abstract the process of curriculum design and approval for the entire program:

- The curriculum is approved by the Board of Studies (BOS) which is held once every year in the month of either January/February.
- Before the BOS meeting, the department Curriculum Design & Development Cell (CDC) reviews all the feedbacks collected from the students, alumni, parents, recruiters and the faculty members and also analyze the PO and PSO attainment report submitted by PAC.
- The PO and PSO attainment with direct and indirect assessment is done by the PAC and the shortcomings, if any, are identified and recommended for consideration to the CDC.
- The CDC summarizes all the analysis and submit their recommendations for the approval of the BOS in the subsequent academic year.
- They are documented in the action plan of each PO/PSO and at the course level and reviewed every academic year for its attainment.

To satisfy the extent of compliance of curriculum for attaining the POs and PSOs, Course Outcomes for each subject in the programme is identified and each Course Outcome is mapped with POs and PSOs with the correlation level and attained the extent of compliance of the curriculum with the PO/PSO's.

- The curriculum is categorized based on the broader domains like basic sciences, engineering sciences, humanities and social sciences, program core, program electives, open elective, projects, seminars, internships etc.
- Each category is then mapped to the PO/PSO based on the courses from that category getting mapped to the PO/PSO's.
- This mapping gives us an idea where the PO/PSO are not getting mapped or getting mapped at a lower extent which allows the CDC to brainstorm on the categories on which curriculum needs to be improved.

Following is the process used to categorize the curriculum into broader domains and further mapped to PO/PSO's:

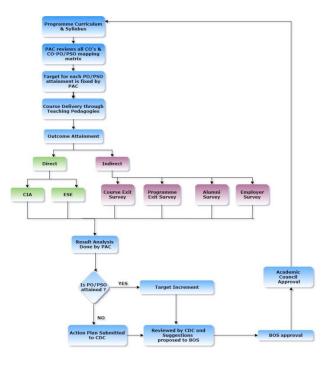

Figure 3: PO/PSO Attainment & Target Setting Process

Extent of compliance calculation is also analyzed through various feedback collected from various stakeholders. The following feedbacks are collected as part of indirect assessment of PO/PSO

Alumni Feedback

- The feedback regarding their adaptability to the industry or higher studies is taken and analyzed for further improvement of PO/PSO attainment.
- This feedback is also used as inputs in the curriculum development and design. Student Feedback
  - The feedback from students is collected for every course as well as at the end of the program. This feedback is analyzed for CO attainment of each course as well as in PO/PSO attainment.

• This feedback is also used as inputs in the curriculum development and design. Employer Feedback

• This feedback is collected to enhance the program curriculum and allows us to understand where the PO attainment can be improved and thus helps in improved attainment.

• This feedback is also used as inputs in the curriculum development and design Parent Feedback

• Parents are important stakeholders in any educational institution. This feedback is taken to survey the parent community as far as PO/PSO attainment is concerned.

#### 15. <u>LIST OF COURSES FOCUSSING ON EMPLOYABILITY/ ENTREPRENEURSHIP</u> / <u>SKILL DEVELOPMENT</u>

Entrepreneurship	Employability	Skill Development

		iatoday.in>story:J
		une 11, 2018).
		According to this
		survey Karnataka
		was the second
		highest state with
		maximum hiring
		activity after
		Maharashtra in the
		year 2018-19.
		Candidates from
		engineering
		domain were hired
		at 23% which is
		maximum across
		all the domains.
		Among the
		engineering
		courses, CS/IT
		continues to
		secure highest
		employability
		percentage at 62%.
		Bangalore posses
		to be the number
		one city with
		highest
		employability. Karnataka stands
		at number one in
		the areas of
		learning agility
		and self
		determination in
		stateswise
		availability of
		skills. (source:
		India skills report
		2019).As per the
		survey conducted
		by CDC team, the
		preference for
		opting CS/IT
		discipline as well
		as employability
		and opportunities
		continues to be
		highest in
		Software sector.

	PRACTICE- I	0	0	2	0	0	2	1	
Preamble									

SUBJECT DESCRIPTION:

During the seminar session each student is expected to prepare and present a topic on engineering / technology, it is designed to:

- □ Review and increase their understanding of the specific topics tested.
- □ Improve their ability to communicate that understanding to the grader.
- □ Increase the effectiveness with which they use the limited examination time.

SUBJECT OBJECTIVE:

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in facing the placement interviews and intended to increase the score they earn on the upcoming exam above what they would otherwise earn.

This course is specially designed for the students of higher degree. It aims to train and equip the students towards acquiring competence in teaching, laboratory skills, research methodologies and other professional activities including ethics in the respective academic disciplines.

The course will broadly cover the following aspects:

- Teaching skills
- □ Laboratory skills and other professional activities
- □ Research methodology

For teaching suitable courses where strengthening in the training of the students is required will be identified and the student will be asked to prepare lectures on selected topics pertaining to the courses and present these lectures before a panel of faculty members. The student will also be required to prepare question papers which will test the concepts, analytical abilities and grasp in the subject. Wherever the laboratories are involved, students will also be asked to carry out laboratory experiments and learn about the use and applications of the instruments. The general guiding principle is that the students should be able to teach and participate in the undergraduate degree courses in his/her discipline in an effective manner. The students will also assist the faculty in teaching and research activities. The course will also contain the component of research methodology, in which a broad topic will be assigned to each student and he/ she is supposed to carry out intensive literature survey, data analysis and prepare a research proposal.

Each group will carry out many professional activities beside teaching and research. Such as, purchase of equipments, hardware, software and planning for new experiments and also laboratories etc. Along with these the students will also be assigned some well defined activities. The student is expected to acquire knowledge of professional ethics in the discipline.

Prerequisite

Nil OPERATIONAL DETAILS

Head of the Department will assign a suitable instructor/faculty member to each student. Students and faculty members covering a broad area will be grouped in a panel consisting of 4-5 students and 4-5 faculty members.

Within one week after registration, the student should plan the details of the topics of lectures, laboratory experiments, developmental activities and broad topic of research etc in consultation with the assigned instructor/faculty. The student has to submit two copies of the written outline of the total work to the instructor within one week.

In a particular discipline, Instructors belonging to the broad areas will form the panel and will nominate one of them as the panel coordinator. The coordinator together with the instructors will draw a complete plan of lectures to be delivered by all students in a semester. Each student will present 3- 4 lectures, which will be attended by all other students and Instructors. These lectures will be evenly distributed over the entire semester. The coordinator will announce the schedule for the entire semester and fix suitable meeting time in the week.

Each student will also prepare one presentation about his findings on the broad topic of research. The final report has to be submitted in the form of a complete research proposal. The References and the bibliography should be cited in a standard format. The research proposal should contain a) Topic of research b) Background and current status of the research work in the area as evident from the literature review c) Scope of the proposed work d) Methodology e) References and bibliography.

A report covering laboratory experiments, developmental activities and code of professional conduct and ethics in discipline has to be submitted by individual student.

The panel will jointly evaluate all the components of the course throughout the semester and the mid semester grade will be announced by the respective instructor to his student.

A comprehensive viva/test will be conducted at the end of the semester jointly, wherever feasible by all the panels in a particular academic discipline/department, in which integration of knowledge attained through various courses will be tested and evaluated.

Wherever necessary and feasible, the panel coordinator in consultation with the concerned group may also seek participation of the faculty members from other groups in lectures and comprehensive viva.

Mid semester report and final evaluation report should be submitted in the 9<sup>th</sup> week and 15<sup>th</sup> week of the semester respectively. These should contain the following sections:

Section (A): Lecture notes along with two question papers each of 180 min duration, one quiz paper (CIA-I) of 120 min duration on the topics of lectures. The question paper should test concepts, analytical abilities and grasp of the subject. Solutions of questions also should be provided. All these will constitute lecture material.

Section (B): Laboratory experiments reports and professional work report.

Section (C): Research proposal with detailed references and bibliography in a standard format.

Wherever necessary, respective Head of the Departments could be approached by Instructors/panel coordinators for smooth operation of the course. Special lectures dealing with professional ethics in the discipline may also be arranged by the group from time to time.

Unit - 4MAPREDUCE APPLICATIONS90	0
MapReduce workflows - unit tests with MRUnit - test data and local tests - anate	omy of
MapReduce job run - classic Map-reduce - YARN - failures in classic Map-redu	ce and
YARN - job scheduling - shuffle and sort - task execution -MapReduce types -	- input
formats – output formats	
Unit - 5HADOOP RELATED TOOLS90	0
Hbase - data model and implementations - Hbase clients - Hbase examples -	praxis.
Cassandra - Cassandra data model -cassandra examples - cassandra clients -H	Iadoop
integration. Pig - Grunt - pig data model - Pig Latin - developing and testing Pig	g Latin
scripts. Hive - data types and file formats - HiveQL data definition - HiveQ	L data
manipulation -HiveQL queries-case study.

	TDA242E03 PREDICTIVE ANALYTICS						Т	P	L	Т	Р	C		
_							3	0	0	3	0	0	3	
Preamble														
Analytics is the process of transforming data into insight for making better decisions														
(INFORMS). There are three primary types of analytics: "Descriptive," which examines historical data and identifies and reports historical patterns and trends; "Predictive," which														
predicts outcomes and future trends from existing data to help discover new relationships;														
"Prescriptive," which formulates and evaluates new ways for a business to operate. This														
course focuses on the second type, Predictive Analytics, which is of particular importance for business because it helps decision makers evaluate possibleoutcomes based on other historical

Pream															
	Introduction to optimization techniques using both linear and non-linear programming. The														
	focus of the course is on convex optimization though some techniques will be covered for														
non-convex function optimization too. After an adequate introduction to linear algebra and															
	probability theory, students will learn to frame engineering minima maxima problems in the framework of optimization problems														
framework of optimization problems. Prerequisite															
Prerequisite Mathematical preliminaries, Linear programming															
Mathematical preliminaries, Linear programming

	PRACTICE- II	0	0	2	0	0	2	1
Preamble								

SUBJECT DESCRIPTION:

During the seminar session each student is expected to prepare and present a topic on engineering / technology, it is designed to:

- Review and increase their understanding of the specific topics tested.
- Improve their ability to communicate that understanding to the grader.
- Increase the effectiveness with which they use the limited examination time.

## SUBJECT OBJECTIVES:

Students are encouraged to use various teaching aids such as over head projectors, power point presentation and demonstrative models. This will enable them to gain confidence in facing the placement interviews and intended to increase the score they earn on the upcoming exam above what they would otherwise earn.

This course is specially designed for the students of higher degree. It aims to train and equip the students towards acquiring competence in teaching, laboratory skills, research methodologies and other professional activities including ethics in the respective academic disciplines.

The course will broadly cover the following aspects:

- Teaching skills
- Laboratory skills and other professional activities
- Research methodology

For teaching suitable courses where strengthening in the training of the students is required will be identified and the student will be asked to prepare lectures on selected topics pertaining to the courses and present these lectures before a panel of faculty members. The student will also be required to prepare question papers which will test the concepts, analytical abilities and grasp in the subject. Wherever the laboratories are involved, students

will also be asked to carry out laboratory experiments and learn about the use and applications of the instruments. The general guiding principle is that the students should be able to teach and participate in the undergraduate degree courses in his/her discipline in an effective manner. The students will also assist the faculty in teaching and research activities.

The course will also contain the component of research methodology, in which a broad topic will be assigned to each student and he/ she is supposed to carry out intensive literature survey, data analysis and prepare a research proposal.

Each group will carry out many professional activities beside teaching and research. Such as, purchase of equipments, hardware, software and planning for new experiments and also laboratories etc. Along with these the students will also be assigned some well defined activities. The student is expected to acquire knowledge of professional ethics in the discipline.

	INTERNSHIP	L	Т	Р	L	Т	Р	С				
		0	0	4	0	0	2	2				
Preamble												

#### INTERNSHIP POLICY, GUIDELINES AND PROCEDURES

#### INTRODUCTION

Internships are short-term work experiences that will allow a student to observe and participate in professional work environments and explore how his interests relate to possible careers. They are important learning opportunities trough industry exposure and practices. More specifically, doing internships is beneficial because they provide the opportunity to:

- Get an inside view of an industry and organization/company
- Gain valuable skills and knowledge
- Make professional connections and enhance student's network
- Get experience in a field to allow the student to make a career transition

## Regulations

1. The student shall undergo an Internship for 30 days starting from the end of 2nd semester examination and completing it during the initial period of 3rd semester.

2.The department shall nominate a faculty as a mentor for a group of students to prepare and monitor the progress of the students

3. The students shall report the progress of the internship to the mentor/guide at regular intervals and may seek his/her advise.

4. The Internship shall be completed by the end of 7th semesters.

5. The students are permitted to carry out the internship outside India with the following conditions, the entire expenses are to be borne by the student and the University will not give any financial assistance.

6. Students can also undergo internships arranged by the department during vacation.

7. After completion of Internship, students shall submit a report to the department with the approval of both internal and external guides/mentors.

8. There will be an assessment for the internship for 2 credits, in the form of report assessment by the guide/mentor and a presentation on the internship given to department constituted panel
