

Systemic Change for World Health

Mrs. Tracey Elizabeth Taylor

graham.traceye@gmail.com

Dear Perspective Talent Recruiters and or Human Resources Development Teams,

My purpose, vision, and goals have identified me as an adversary for all individuals and communities of the private and public sector. My effervescent personality is consistently visible and, I openly desire to make every personal encounter or communication exchange purposeful. I am humble and fortunate for my multidisciplinary education foundation. I have trained in several areas of emergency medicine, (under the best Trauma Physician, Dr. Norman McSwain) pharmacology and pharmacodynamics of medication administration and management (CPhT) and practical leadership skills in public health education. My greatest asset reveals an eager career learner that consistently seeks a way to empower others, celebrate differences in community health, and support a transformational change of health. I celebrate creativity in digital and print media for dynamic productivity. I am a team player and strive for excellence beyond all boundaries. I am judicious with personal self-assessment; welcoming corrective actions to improve team goals centered around improving the lives of others Mind, Body, and Spirit. My emotional intelligence has been my guide to exceptional conflict resolution and diversity challenges in the workplace.

If you should require any further information, please feel free to contact me or my references to attest to my character, education, or dedication to improving the quality of lives of others. Please utilize hyperlinks at your discretion.

Kind Regards,

Mrs. Tracey Elizabeth Taylor

Mrs. Tracey Elizabeth Taylor

*My optimistic, resilient view of health, vision and life goals operates beyond have boundaries to prioritize quality health over government policy. Current Healthcare Reform became a catalyst, however, lacks a possible eternal resolution; I have a purpose of improving the lives of **ALL beings**. Current public health data and visual aids unveil the indigent truth of Louisiana current health rankings. Dare to be different with inviting each community to establish a health-centered culture utilizing grants, 501C3 resources and public assets to fund the change. A blueprint to quality healthy living standards, community and family shared health goals remains nonexistent. By default, the unhealthiest citizens are indigenous to a life of poverty perpetuating negative, immoral actions within all generations. Social determinants should no longer determine life expectancy or health literacy. I propose a grassroots call to action to innervate a community to change. Repeated trials and unsuccessful attempts expecting a different outcome defines insanity; this is no longer the acceptable option.*

My healthcare vision and goals call for an effective strategy to preserve and sustain a culture of wellness. Validation of reform should reflect the positive change, improved quality of health and significant cost reduction of medical expenditures for chronic illness. Public assets (public funds or tax dollars), must have an integrated health strategy to eradicate the opposition rejecting high quality of life. (Tobacco consumption, excessive alcohol abuse, and growing obesity epidemic)

I propose a resolution of accountability that all entities being publicly supported to create a new standard of health. Leadership begins at the top; our elected trusted officials should lead by example and promote the lifestyle that would legitimately change the illustration of a degraded failing culture of health we see today. A “DUI” or “DWI” negatively impacts the life of others; considerable attention should be giving to public smoking due to the carcinogenic effects of tobacco as well as food product consumption and selections. (See Morbidity and Mortality rates via CDC)

*Our generational disparities estimate 274 billion dollars spent by 2030 solely on hypertension management. If the **SPRINT study** can demonstrate an effective change in getting patients to maintain the ideal systolic and diastolic function, it is apparent and obvious we should implement the same dynamics of the study in same environments within control population, and sensible medication adherence policy. How much is spent on chronic diseases? My vision stands on the platform to provide equality of health education/health literacy, environment, economy and other resources to eliminate the failed attempts that have negatively impacted community success.*

I value myself. I seek answers. I value your life!

Do You?

Get Informed! Demand Change! Discover the ideal solution

You have a Voice that Matters.

Use It!

I am an optimistic health adversary for effective change. Preservation and restoration of reformed health care will perpetuate cultural, religious, musical, artistic, economic, educational, and medical legacies yet to be discovered. I dedicate my motivation for health transformation utilizing a collaborative, multidisciplinary, integrated health market strategy supplemented by a holistic approach designed for a robust quality of health.

Experience

Board Member

Fit Lot U.S.A.

- ❖ Strategizing marketing infrastructure, Organizing community build efforts (Urban and Rural Areas). Creating a model for community build days in addition to attaining and sustaining health goals of the commonwealth. Creating health content to align with fitness goals and principles, assisting in Grant Writing to secure funding, ensuring safety, integrity and efficacy of design and resources, acquiring data as it relates to health goals and health strategies,
