## How to Link Your Screen to Your Dashboard.

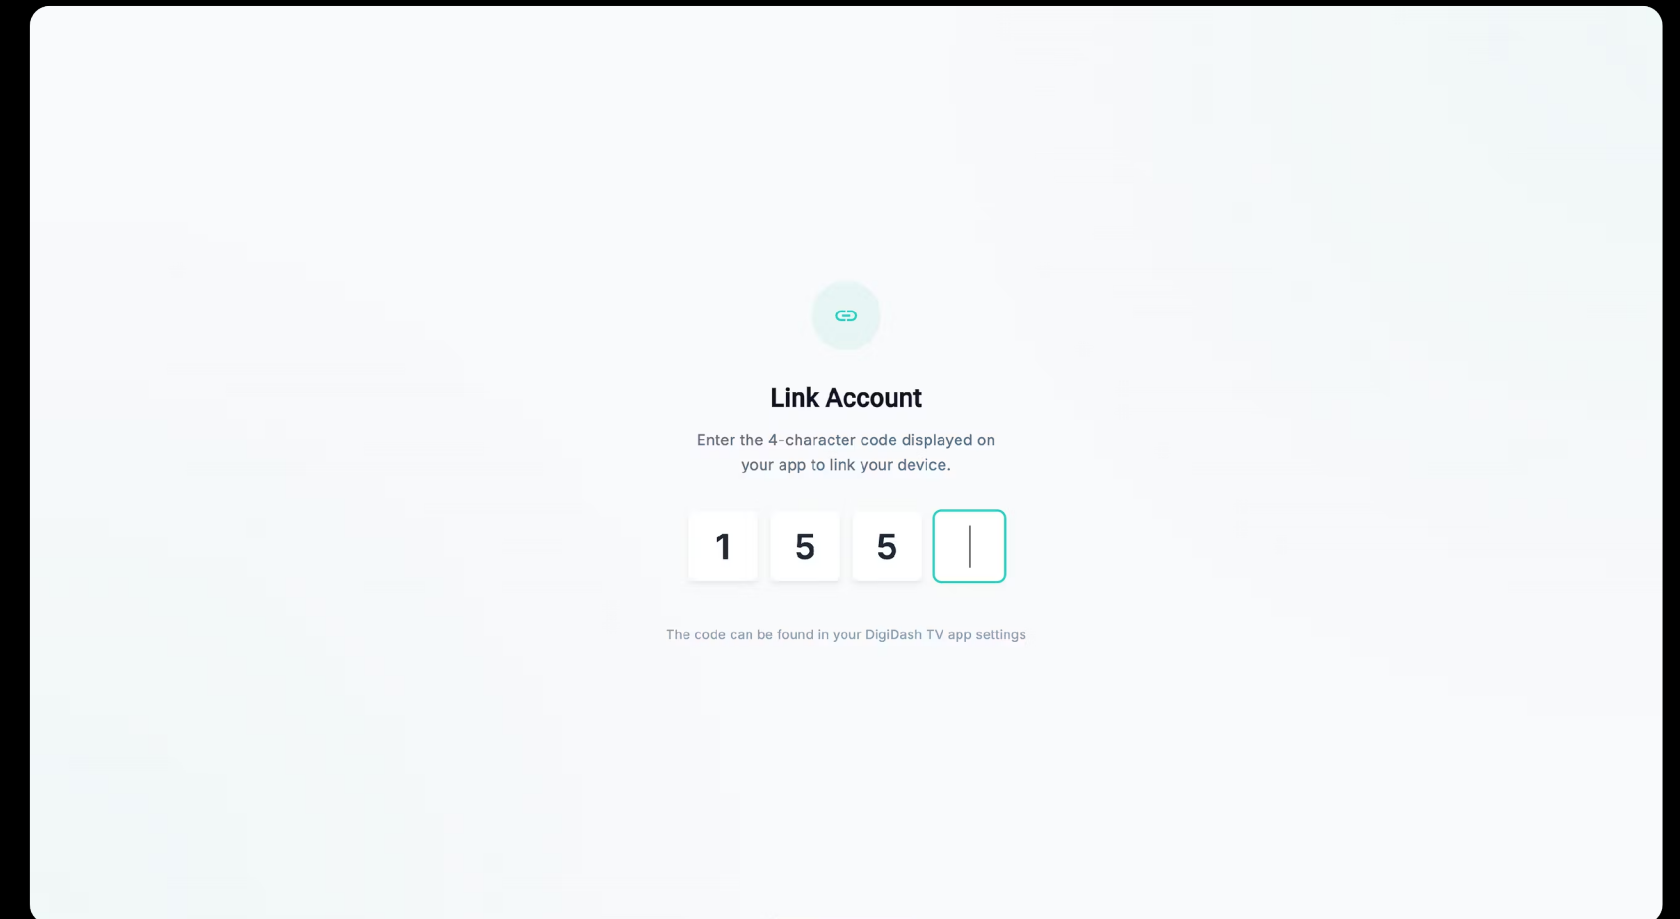

# Step 1 (Download & Launch DigiDash)

Download the DigiDash app from the Google Play Store on your Android TV or streaming device. Once it opens, you'll see a 4-digit code on your screen.

**Pro Tip:** For the best experience, we recommend using a Nova Pro 4K streaming box.

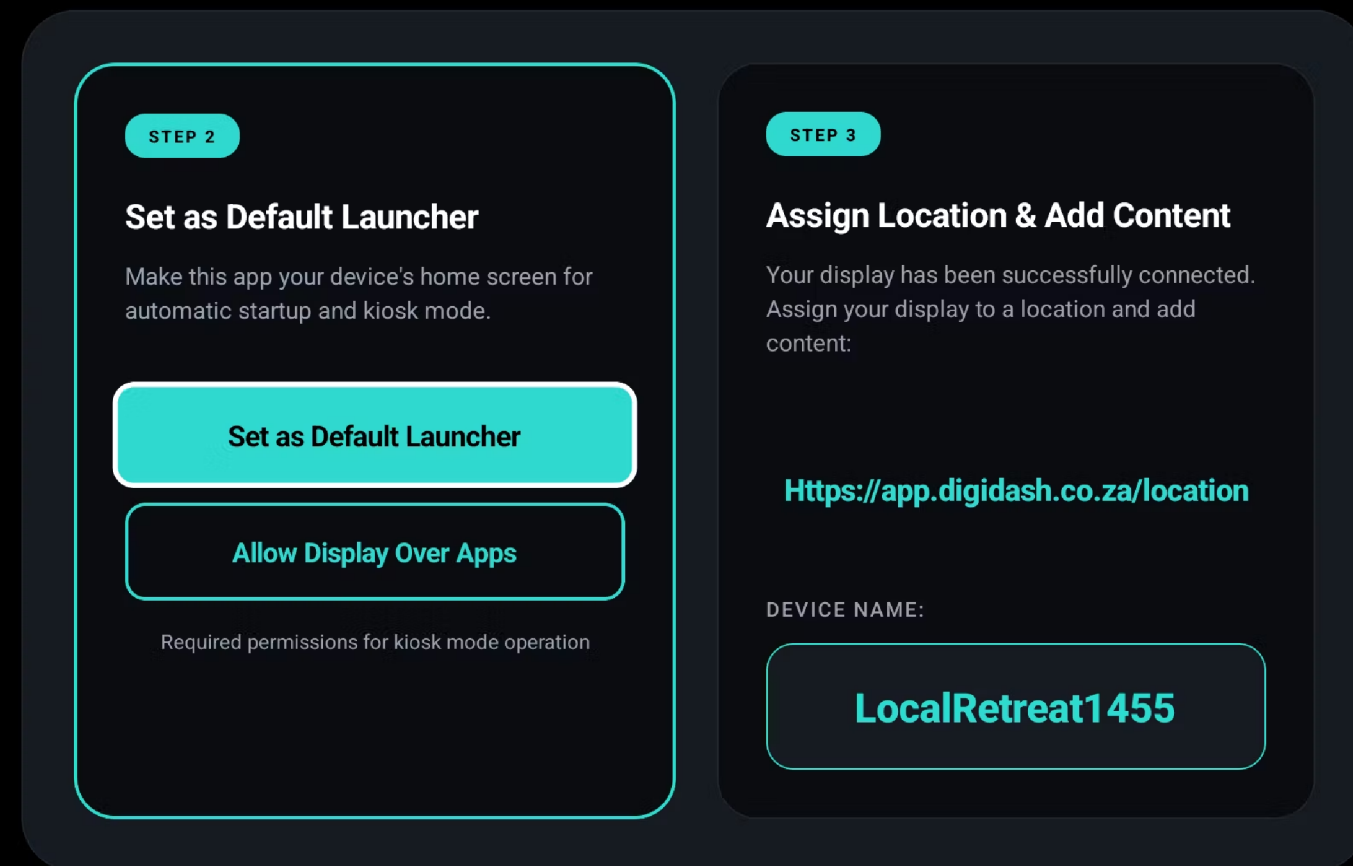

Try Pitch

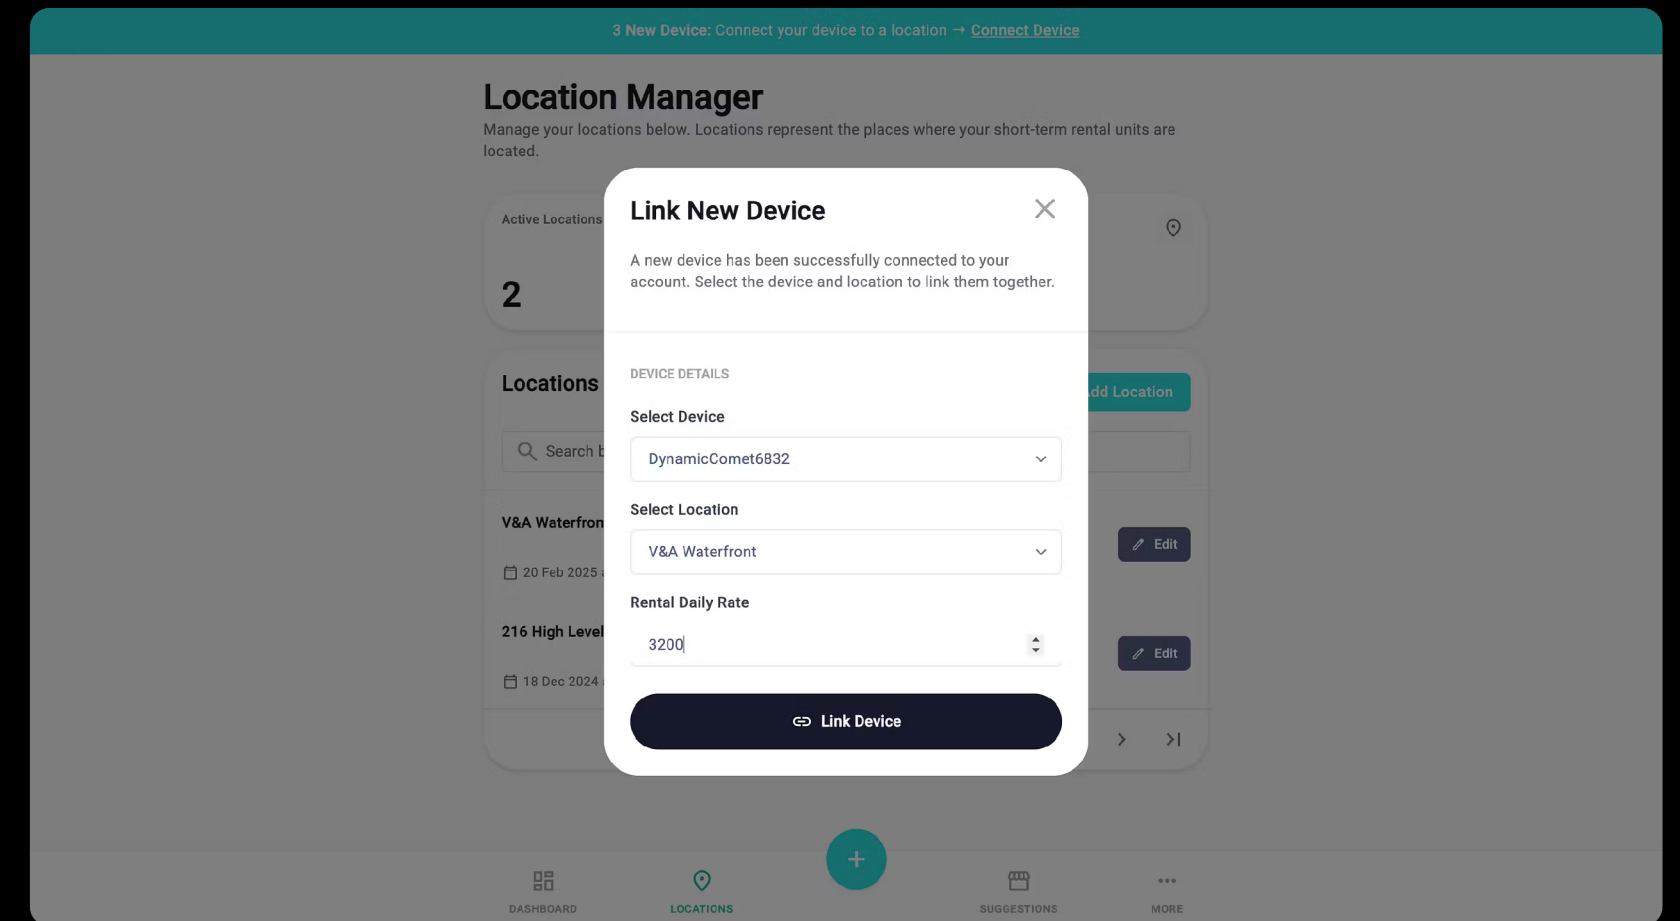

On your phone or computer, go to [app.digidash.co.za/link](https://app.digidash.co.za/link) and enter the 4-digit code from your TV screen. Your device will connect to your account automatically.

**Note:** Make sure you have an available device slot in your DigiDash account before linking a new device.

# Step 2 (Link Your Device)

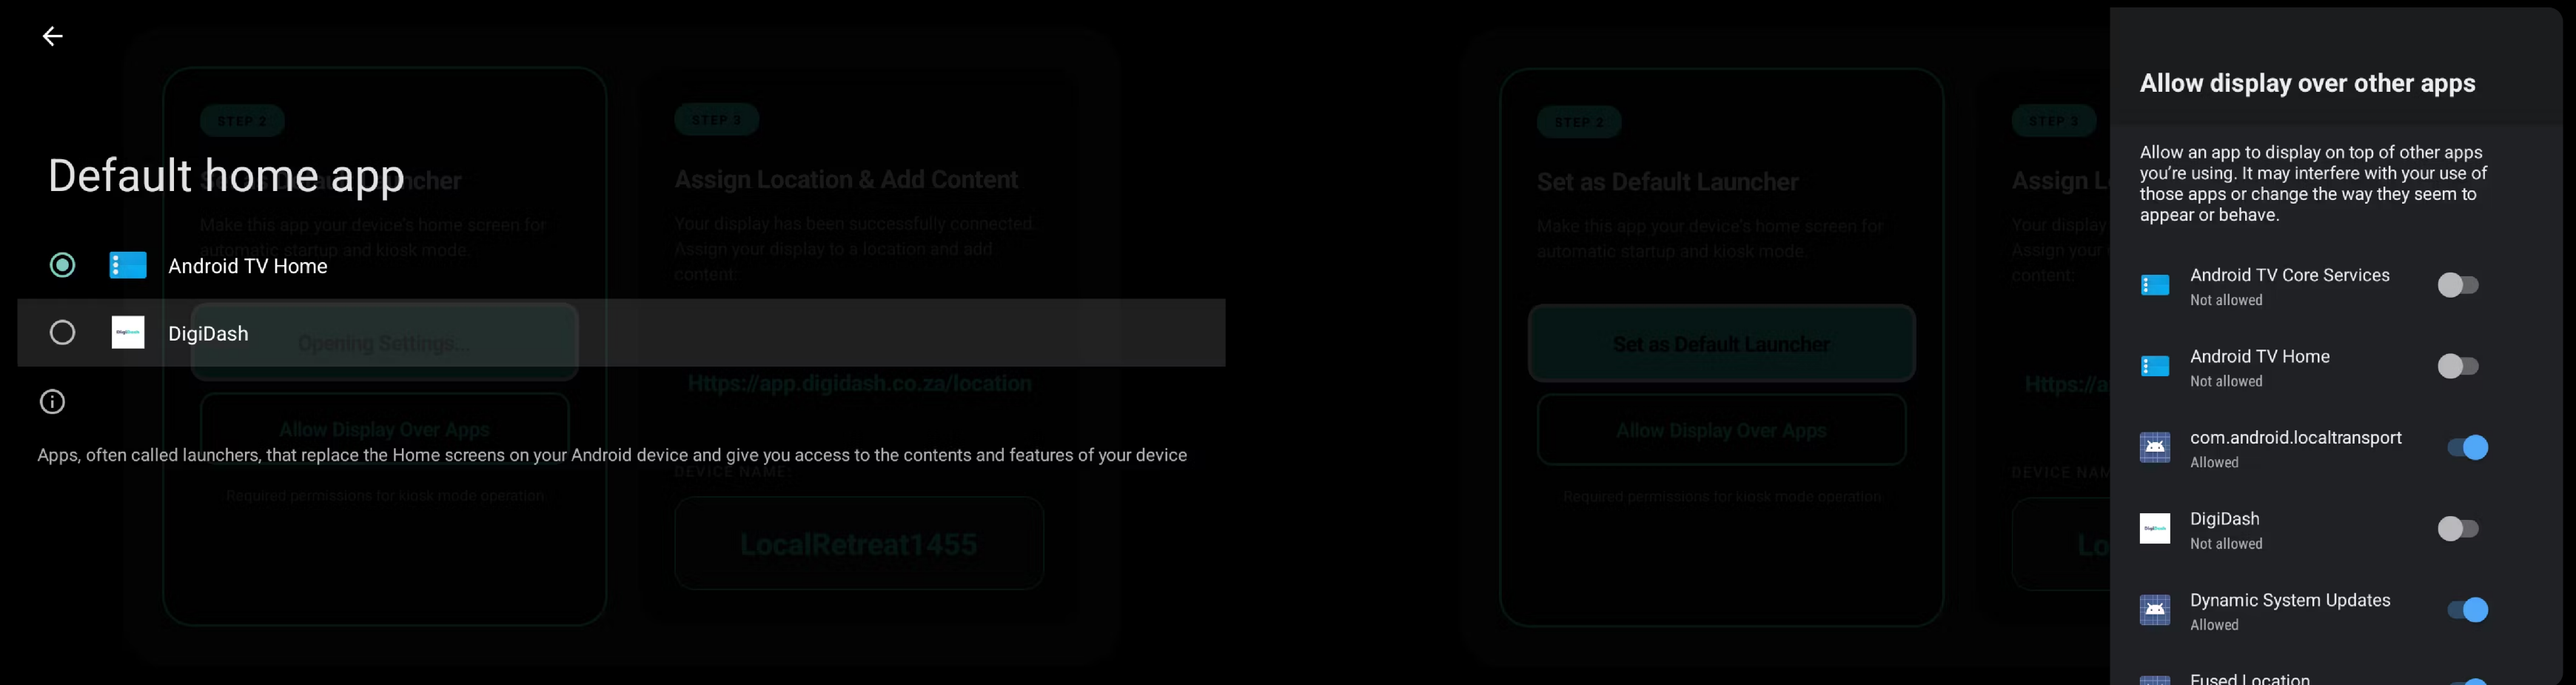

Navigate to [app.digidash.co.za/locations](https://app.digidash.co.za/locations) and link your device to a location. You'll be asked to set permissions—see the next step for details.

Now link the device by choosing a device name, selecting your location, and adding your rental's daily rate. This will automatically connect your device to a theme.

**Pro Tip:** Setting permissions gives you full control over the TV experience. This will set DigiDash as the default launcher.

# Permissions (Bonus set up)

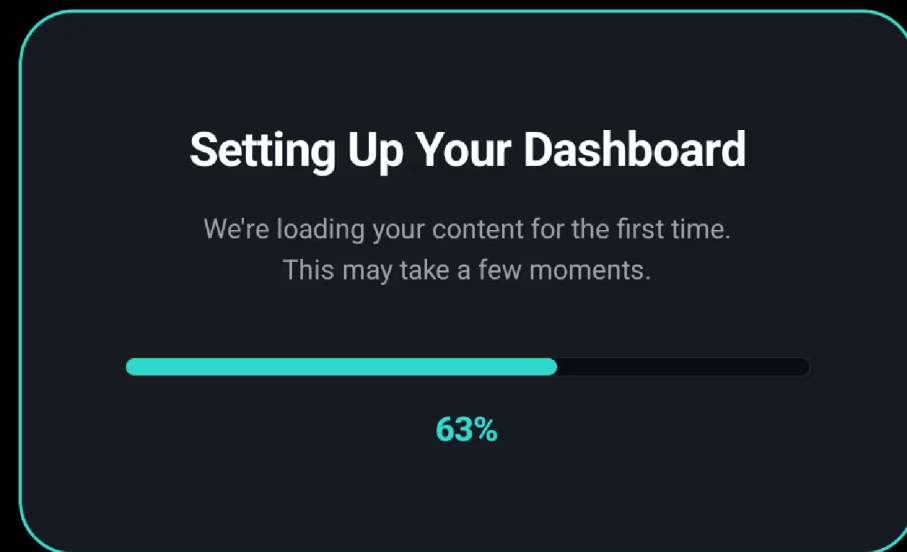

Set DigiDash as your default home app. This ensures the app opens automatically whenever guests turn on the TV—creating a seamless, custom TV experience.

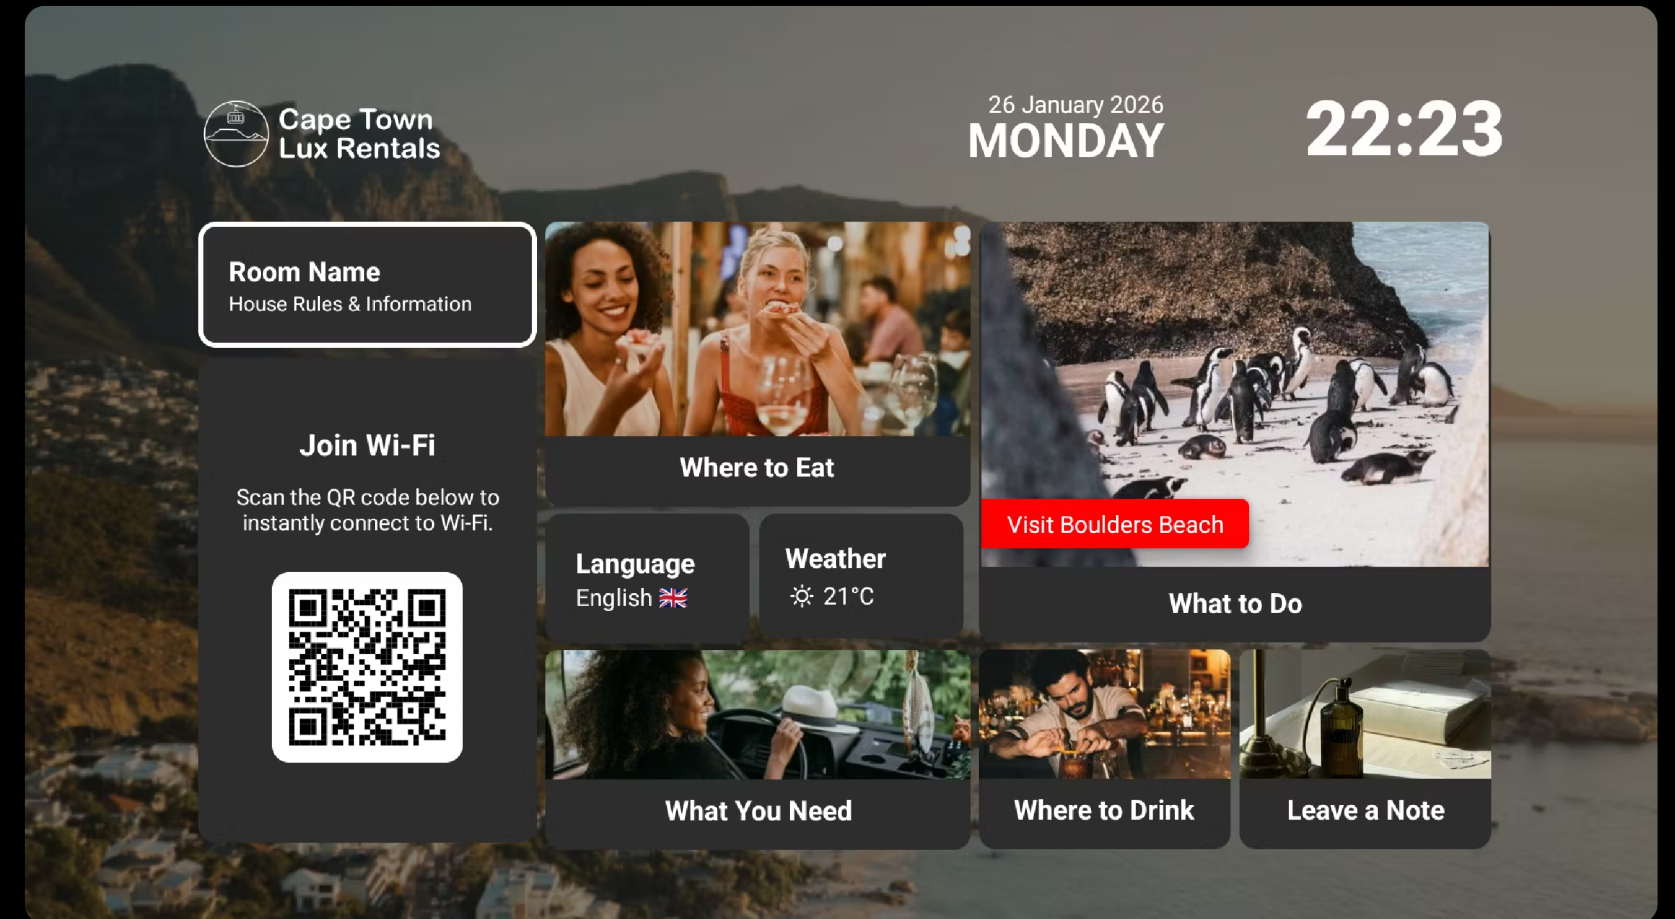

Allow display over other apps. This gives DigiDash priority on the screen, ensuring your content stays front and center even when other apps are running.

**Pro Tip:** This is a great setting—your guests will always have easy access to local recommendations and places to explore in their area.

# Step 3 (Load Your Content)

We'll now sync all your content to the device. The first load will take a few minutes as we pull in all your information, but after that, everything will load instantly.

All set! Your DigiDash is ready for your first guest.
