Version Overview

- We've seen Doppler at it's best when it works closely with iOS and the Apple eco-system
- Doppler already supports the iOS Share Extension and the iOS Files app, and today's update makes Doppler feel even more at home on your devices
- Doppler 2.3 adds 3 new integrations to make Doppler even more powerful
 - Siri Commands and Suggestions
 - Spotlight integration
 - Custom CarPlay App
- Siri Commands
 - Supports standard playback commands (play/pause, skip forward/backward)
 - Supports media specific commands (i.e. play album, play playlist, play liked songs)
 - Available in English, French, German, and Spanish
 - iOS 14.5 beta includes improved support for 3rd party music apps in Siri
- Siri Suggestions
 - One-tap play from lockscreen
 - Integrates with Siri suggestion system
 - As you use Doppler, Siri can learn patterns around how and when you listen to music
- Spotlight integration
 - Doppler songs and playlists will be indexed and available as part of Spotlight search on Homescreen
 - Open Doppler to specific screen with content, or start playback without launching app
- CarPlay app
 - Custom CarPlay app using new iOS 14 APIs
 - Access library content including Liked Songs and Recently Added
 - Quick navigation throughout UI including helpful buttons to play all content
 - Control app using Siri voice commands

About Doppler

- A desktop-class music player on your iPhone
- Built specifically for people who buy music and support artists
- Beautiful, thoughtful design
- Import music and edit artwork/metadata without needing a computer
- Respectful of user privacy
- Independently owned and developed
