

AIRPORT TRAFFIC MONITORING SYSTEM

The next level of Airport Ground Traffic Awareness

KEY FEATURES:

- *Airside operations automation in a non-A-SMGCS environment, in poor visibility conditions, at night.*
- *Ground and air traffic, vehicles and aircraft on the same screen*
- *Safety management of ground operations.*
- *Prevention of collisions between aircraft and aircraft, aircraft and vehicles.*
- *Smart tracking of runway occupancy.*

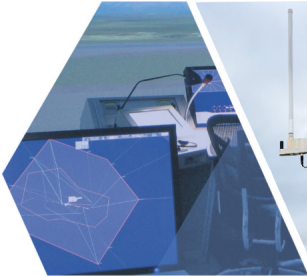

Highly flexible, affordable and easily deployable solution for airport operators

ADVANTAGES:

- *Safety improvement*
- *Data availability for the operating efficiency measuring*
- *A sustainable airport development*
- *Earning capacity maximization*
- *The digitalization of business processes*
- *The transition from CAPEX to OPEX*
- *Could be an extension to A-SMGCS*
