

ANSART

ATC SIMULATOR

ATC SIMULATOR

Combined Tower & Radar training

Simultaneous joint and/or independent training scenarios within a single system (simulators virtualization)

Covering all types of training:

- Basic
- Refresher
- Recurrent
- Rating

Flexible composition and interchangeability of working positions

3D visualization

Highly realistic out-of-the-window 3D visualization up to 360°

200+ Aircrafts

25+ Vehicles

All kinds of weather conditions

Simulation of emergencies

Any model of aircraft and vehicle can be created and customized by the user

ATC SIMULATOR

Voice Communication System

Fully integrated software-based VCS or hardware-based VCS

Playback & debriefing

Built-in recording and playback capabilities for precise interactive debriefing

Exercise preparation

Automated and manual scenario generation
Up to 2 000 simultaneously simulated flights
Highly-realistic and editable performance models and characteristics of aircraft, ground vehicles and surveillance sensors
Comprehensive editor tools for airspace and airports design

Basic delivery package

5 airports with a 3D visual environment*
10 FIR airspaces
A comprehensive set of ready-to-use training exercises
Editors and exercise preparation tools
Any custom configuration and delivery package upon request
3D model of any client's airport can be created in 1 month
