

# VECTOR

**ERGOWARE**  
smart furniture

## Description

Vector is a technical console specially developed for control towers where ergonomics and modularity are the main focus.

Its structural aluminum frame combined with metal panels and a continuous table top expresses rectilinear shapes that can be adapted to any kind of environments, especially air traffic control towers where the space is limited and the field of view needs to be perfect.

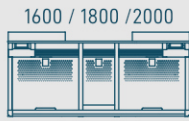

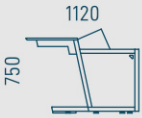

## Technical Characteristics

Vector was designed to respond to the technical and ergonomic requirements of operations related to air traffic control, standing out its flexibility and high capacity in the management of equipment and cabling integrated into the structure itself.
