

DEPLOYABLE ATC

OPERATIONAL CONCEPT

The deployable ATC Kit is designed to satisfy the most difficult operating conditions.

- Enables rapid deployment (< 5 min) and detection of cooperative targets within line-of-sight based on ADS-B technology and VHF Radio communications.
- Intended for contingency or in-the-field special missions.
- It can be customized according to the customer's mobility requirements.

Dual-band networkable sensor receives position data from targets, equipped with UAT,1090ES ADS-B, FLARM

The data is decoded, processed and displayed on the rugged laptop

After processing, the surveillance data can be forwarded to external systems in various formats via public and private networks
