*Your trusted engineering partner in
aerospace design & certification.*

Is your company aiming to achieve type certificate for the latest aircraft model?

Are you struggling with expanding your engineering workforce?

Are you looking for support in a specific project to expand in-house expertise?

Are you struggling with internal processes related to the aerospace industry high quality standards?

We have delivered more than 87.000 hour in engineering projects to support aerospace compliance.

We are experts in Talent Representation, gathering around us a community of highly prepared and passionate engineers.

We are the remote RAMS engineering team of leading aircraft manufacturers in their respective categories.

We are experts in leading digitization processes to enhance the way you work with our extensive IT skills.

Engineering services in the field of Reliability, Availability, Maintainability, Safety (RAMS), Aerospace Design and Regulation Compliance for the aerospace industry.

ENGINEERING SCOPE

Reliability, Availability, Maintainability and Safety Engineering services as required for Type Certificate in CS-25, CS-23, CS-29, CS-27, SC-VTOL, CS-LURS, CS-LUAS.

Aerospace Design Engineering: Acoustics, avionics, flight physics, aerodynamics, test engineering, structural design.

Digitization and bespoke software solutions.
