

Company profile

Since it was founded in 1989, MEP has been developing and supplying Voice Communication Systems for critical applications in the Maritime and Air Traffic sectors. Traffic controllers worldwide rely on our systems. Thanks to our continuous innovation, we offer new solutions that improve safety and traffic flows.

Our organization works in full compliance with the rigorous quality criteria of the Aviation sector such as ED137 and ED153 for the development of software, hardware and comprehensive testing of our systems. This guarantees performance of our systems under all conditions.

MEP develops the hard and the software parts of our Voice Communication System completely by itself in the offices in the Netherlands. MEP is a ISO9001: 2015, ISO27001 and ISO 14001 certified organization

Air Traffic Control

MEP delivers main systems as well as Last resort systems for Air Traffic Controllers. MEP systems are known for delivering the fastest start up time and the lowest energy consumption in the industry. The systems are very scalable and the user interface can be configured according to your needs in an easy way. In that way not only your current wishes, but also future adaptations can be implemented easily. This makes the systems future proof against low cost of ownership.

MEP in a changing Air Traffic market

There are a couple of new market dynamics in the Air Traffic Market. The first is the transition from analogue to full digital systems. At the show in Geneva MEP demonstrates it's latest full IP Voice Communication System.

The other dynamic is that due to falling revenue streams, more and more airports becoming cost aware. MEP has designed it's systems always to deliver on a low cost of ownership.

We are looking forward to demonstrate our solutions and discuss opportunities for your situation at the stand B36

References

We can proudly state that our customers are very satisfied and that many well known (sea/air)ports are making use of our system every second of the day. Below you'll find a selection of our references.
