

## Seriously Connected with Radius

Radius is a fully managed, cloud based push to talk communications platform for business and mission critical needs.

Radius delivers individual and group calling / messaging, GPS location services, and video. Plus, it will support Apps that can be aligned with your specific business needs.

Radius is quick and easy to deploy and expand, and it can connect with traditional radio networks, providing greater flexibility in deployment.

Whatever the size of your organisation and the location of your workforce, Radius will satisfy all your communication needs.

- ✓ Video messaging
- ✓ Voice recording

# Benefits

Radius offers a streamlined communication solution that bypasses the need for elaborate and costly infrastructure. Key features of these devices include:

## 1. Quick Setup:

- Devices are ready for use straight out of the box, enabling immediate deployment in any location.

## 2. Network Flexibility:

- Mobile Networks: Operates seamlessly over existing mobile phone networks.
- Wi-Fi Connectivity: Prioritises corporate Wi-Fi networks and can transition to other available Wi-Fi and cellular networks, optimizing signal strength and connectivity.

## 3. Operating System Compatibility:

- Android and iOS Support: Devices run on either Android or iOS, allowing compatibility with a wide range of applications, including corporate systems.

This combination ensures reliable and versatile communication capabilities for users, leveraging existing network infrastructure and supporting a broad array of software applications.
