

A caring force for a safer world.

The Chevron Group is the UK's leading infrastructure safety business

The Chevron Group is the unseen workforce that keeps people safe around road works, construction sites and industrial work zones.

Our work matters because our employees, our customers' employees and the general public deserve to work, travel and move around the UK safely.

With over **1,800 employees**, a network of **45+ depots**, and a **revenue of more than £200 million**, our success is down to the priority we give our customers, our high-degree of expertise and absolute dedication to excellence in all we do.

We specialise in urban and high-speed traffic management, environmental consultancy, arboriculture, and barrier services.

Traffic Management

When works are required on our motorways, carriageways, streets or footpaths, the workers who carry out those works - as well as the general public affected by them - need to be kept safe. We keep them safe by designing and installing professional temporary traffic management services to ensure that everyone gets home safely. This could involve installing temporary traffic lights, putting out cones, creating diversions or using technology to protect workers.

We work with clients in a range of sectors including utilities, construction, rail, high-speed network, and local authorities. We also provide traffic management services at major events throughout the UK.

The Chevron Group has two traffic management businesses. In England and Wales, we operate as Chevron Traffic Management, and in Scotland and N Ireland as Class One Traffic Management.

Barriers and Fencing

We supply a range of barriers and fencing designed to place a physical boundary around work sites; on roads, motorways and pavements; and at events. We also provide security fencing including gates and access control systems, as well as environmental noise barriers and sound screen solutions.

We work with construction companies, civil engineers, transport agencies, utility companies and event organisers.

Our three barrier businesses are HBS, Roocroft Road Restraint Systems, and Metor Services.

Environmental Consultancy, Arboriculture and Commercial Vegetation Management

Managing and protecting our green spaces is at the heart of what we do. We provide a range of services including grass cutting and landscape maintenance, tree works, de-vegetation, weed and pest control, and mechanised arboriculture.

Our consultancy business, Chevron Green Consultancy, helps clients create sustainable environments by developing and improving long-term maintenance and management schemes. Our mission is to provide biodiverse habitats for generations to come. Our consultancy expertise covers ecology, arboriculture, environmental and landscape management. Our clients come from all sectors including highways, rail, utilities, local authorities and construction. Many of them have been using our services for many years, returning to us time and again.

We operate these services as Chevron Green Services.

Digital Solutions

Keeping people safe inspires our entrepreneurial spirit and creativity. We share ideas and deliver solutions that lead the way, digitally and sustainably, for better all-round performance, driving growth and setting new standards.

HRS is our digital specialist who develops new technology and award-winning digital products that improve road worker and road user safety. Their products are used extensively throughout the UK and in global markets.

Working for the Chevron Group

There are many great reasons why you should come and work for any of the businesses in the Chevron Group:
