depotnet
software - ready for service

WHO WE ARE

The Management Team
30+ years industry experience in Utilities, Commercial Management & in building and rolling out Utilities Software. After recent investment from Aquiline backed Everfield, Depotnet has the resources to grow in a controlled way faster than ever before.

Unique position in the industry
Depotnet supports more than 60,000 users daily –this combined knowledge helps Depotnet maintain the position as the UK's leading Utilities Works Order Management solution.

Constantly Evolving & Growing
As the leading works order management software across all major utilities, depotnet has access to a huge knowledgebase which leads to the product constantly evolving.

depotnet
software - ready for service

WHAT DOES OUR SOFTWARE DO

Depotnet – End-to-End Works Management System

Depotnet comprises a suite of key modules to enable you to manage the build & maintenance of your key assets

Depotnet also contains several complementary, tactical modules that enable you to create a true one-stop shop for managing the build.

Depotnet Mobile ensures all field activity is logged, tagged and available throughout the life cycle of a job.

Depotnet supports more than 60,000 users daily –this combined knowledge helps Depotnet maintain the position as the UK's leading Utilities Works Order Management solution.

Interact with your Supply Chain

- Issue work via Depotnet to your Supply Chain partners
- Receive real-time updates from the field
- Enforce Compliance at every stage of the build
- Review Progressive Assurance throughout the build

Interact with your Core systems

- Use Kafka events to update your core ERP/ Finance systems or Data Lakes

Integrate with key 3rd parties

- DfT on Street Manager
- Openreach PIA database
- Google/ OS Mapping Tools

WHO ARE OUR CUSTOMERS

For the Business Owner

Single source of Business Truth across Contracts

For the Commercial Director/CFO

Granularity of commercial data to extract into
ERP systems

For the SHEQ Director

Auditable history on all H&S incidents

For the CTIO

All data in one place, accessible via Kafka
or APIs

For the Administrators

All information on Works & Teams in one place

For the Teams

Easy to do their core jobs

depot**net**
software - ready for service

WHAT THE BENEFITS ARE

- **Efficiency of management** –

  Low levels of efficiency within workstreams, admin, supervision, and management teams

- **Commercial control and reporting** –

  overpaying, underpaying, late payments, and unclaimed works

- **Manual Activity Reduction** -

  Time-consuming manual activities impact productivity and prone to human error

- **Centralised Data Management** -

  Multiple systems and trackers lead to fragmented data management and unnecessary cost implications

- **Direct Cost Reduction** -

  High volume of costs and personnel required for single tasks and duplication of effort

- **Defect and Claim Avoidance** -

  Lack of evidence and documentation for defect and claim management to avoid charges or additional works

- **Health & Safety Compliance** -

  Ensuring compliance with health and safety regulations

- **Audit Trail and Dispute Mitigation** -

  Difficulty in tracking job activities and preventing client disputes

- **Compliance and Permit Management** –

  Inadequate compliance and permit management processes result in avoidable FPN's and Section 74 charges

Commercial Control And Reporting
Management access to sensitive information with systems that require full data access.

Manual Activity Reduction
Eliminate double keying and manual extraction processes, automating repetitive tasks to save time and resources. By minimizing manual intervention, Depotnet boosts efficiency and reduces error rates.

Centralised Data Management
Depotnet serves as a comprehensive file management repository, centralizing all data and documents in one place. This consolidation simplifies access, improves visibility, and enhances collaboration among team members.

Direct cost Reduction
By streamlining processes and automating repetitive tasks, Depotnet reduces the need for excessive manpower, resulting in significant direct cost reduction. This optimized workflow leads to cost savings and improved resource allocation.

Audit Trail and Dispute Mitigation
Provides a robust audit trail feature, capturing all actions and changes within the system. This comprehensive audit trail serves as evidence to mitigate disputes, ensuring transparency and accountability.

Defect and Claim Avoidance
Defect and claim avoidance via photo evidence capture and comprehensive audit trails. Document work activities and provide evidence of completed tasks.

Health & Safety Compliance
Toolbox talks, briefings, and competency tracking to support health and safety initiatives. Enhance safety protocols through risk assessment, competency management, and real-time communication tools.

Compliance and Permit Management
Enables full control over fines and permits through enhanced notifications and real-time monitoring. By centralizing permit management and facilitating compliance checks, Depotnet minimizes compliance risks and ensures regulatory adherence.

Seamless Integration and Data Transfer
Facilitates seamless data integration through event-driven mechanisms, enabling real-time data transfer between Depotnet and external systems.

Single Sign-On (SSO) Integration
Integrates Single Sign-On functionality, simplifying user authentication and enhancing security, without the hassle of managing multiple credentials.

Job Management

Manage your Contract delivery through our end-to-end Job Management system and utilise our additional modules as either standalone or complementary Health & Safety and Quality Assurance modules.
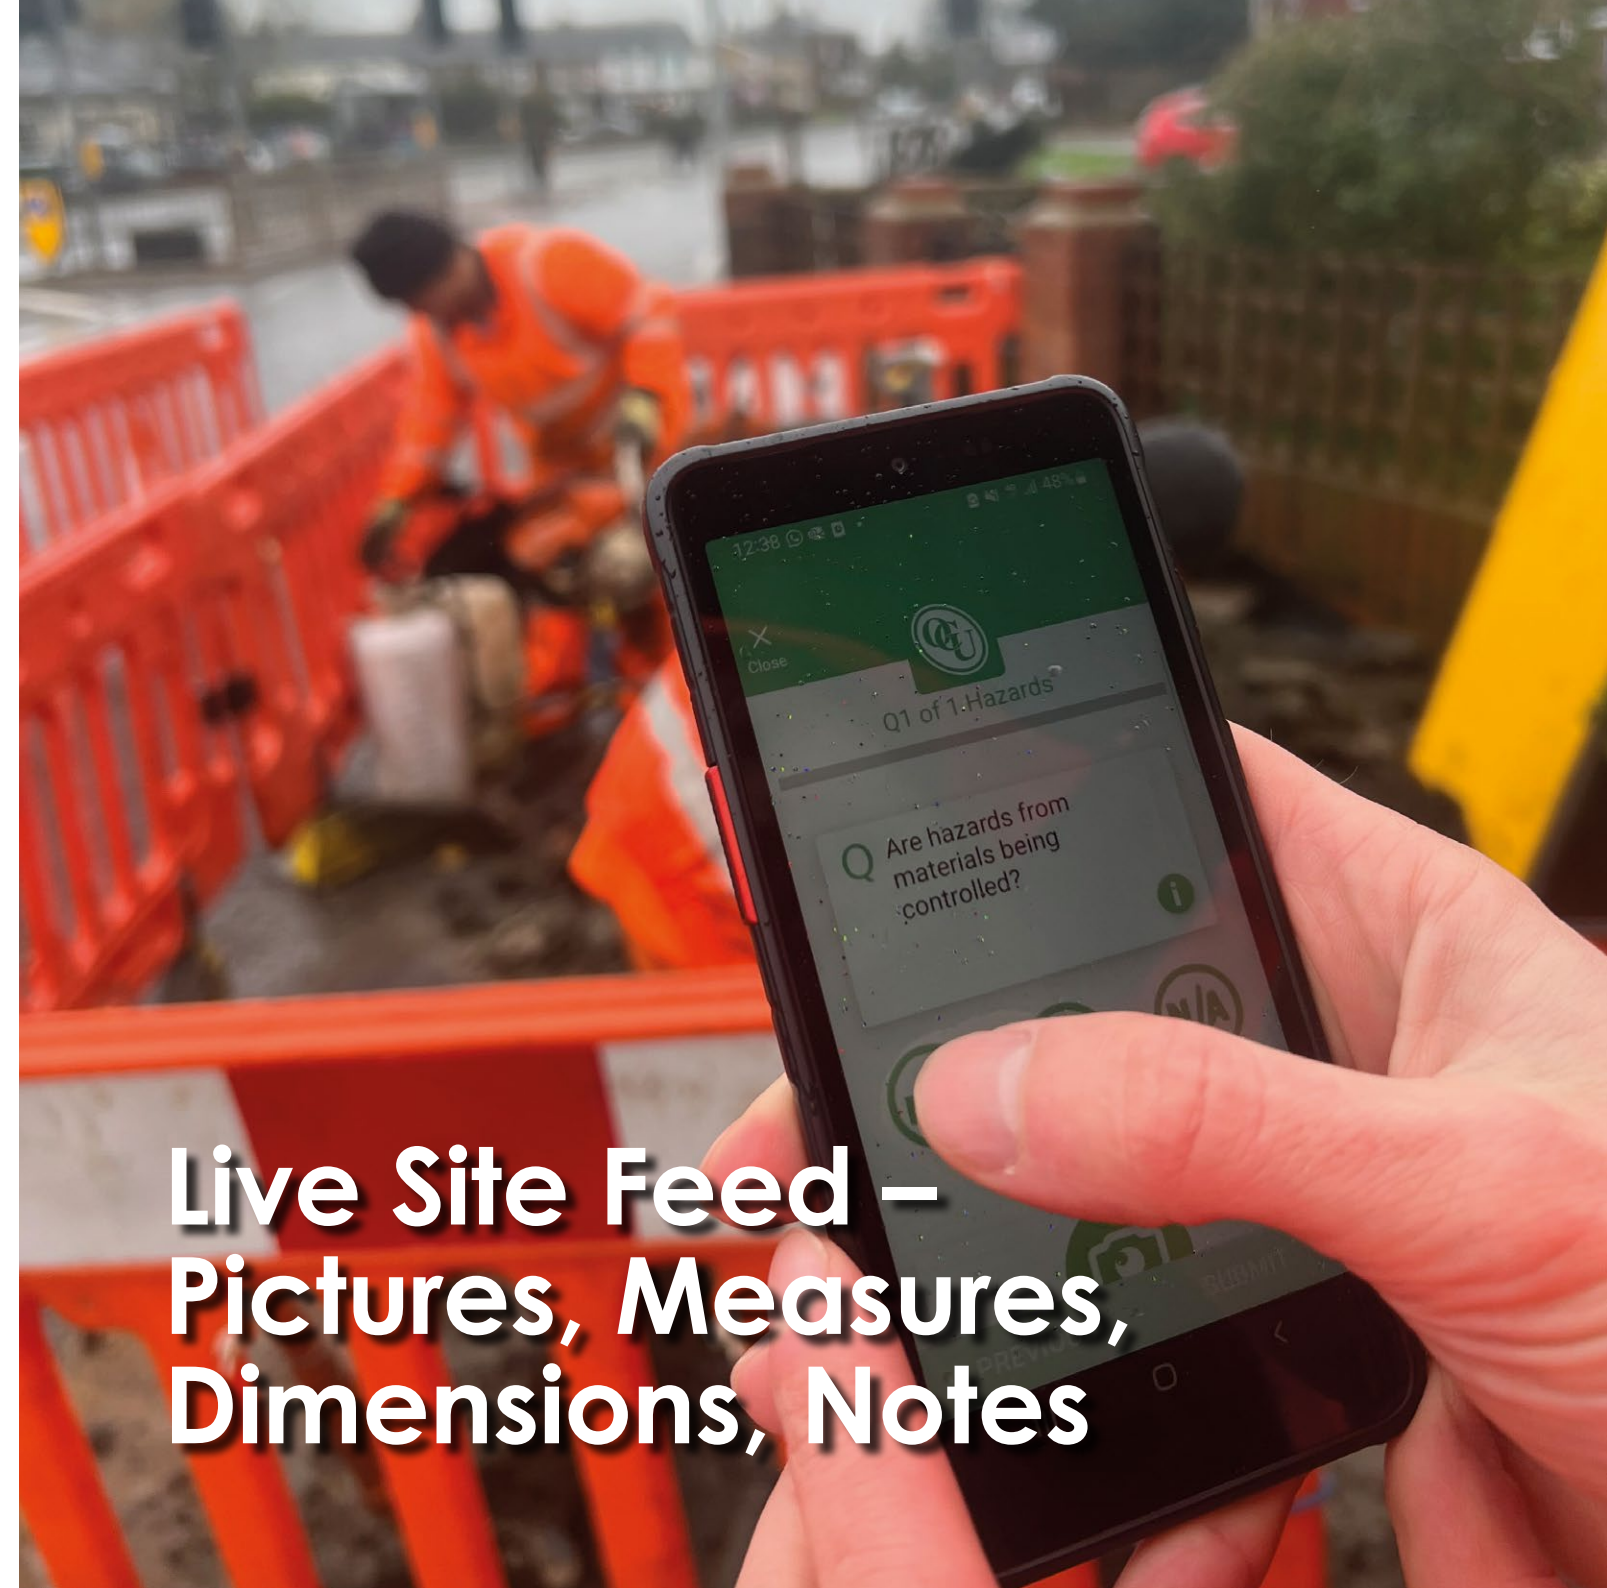

Real-time Data sharing
Extract your data at a frequency and at status changes/ events to suit your business; utilise people-data feeds.

Safety & Quality Assurance
Track all aspects of the job life cycle from setting up safe sites, lone working, progressive assurance through to commercial completion.

Depotnet Mobile App
Multi-platform mobile app, runs on any device.

Live Site Feed – Pictures, Measures, Dimensions, Notes

Audits & Inspections

Take control of your site safety.

- Create Environmental Safety Critical or Quality Audits from within the system
- Inspect People, Locations or Assets - either ad hoc, within a scheduled regime, or via trigger from an issue identified from site
- Capture details of issues raised from site, raise & track remedial actions, and assign corrective measure tasks to users in real time

Build your own Templates

Create Questions (point-based where required), Severity Levels, Reponse Types, Triggers, Pass/Fail percentages to build bespoke Inspection Sheets or Risk Assessments.

Dictate Pass/Fail percentages for different Inspection Types.

Quickly re-order, re-word or modify templates via version control in line with business priorities.

Targets/ Regimes

- Ability to set and then manage inspector/ audit targets
- Manage multiple audit regimes.
- Target Report, Inspections, Report, Inspection Schedules
- Compliance Score reporting on Operatives, Supervisors and Regions

Defects

Full interface to administer outstanding defects; these will be defects that have failed on site and not been rectified at the time of failure
- Dashboard view on all defects, age and status.
- Drill-down view to interrogate types of defect.
- Defect data fully exportable
- Function to review defect, rectify and change status/ marked as closed
- Add photos to rectified defects
- Ability to schedule Defects/ Actions to certain users to rectify

Dashboard/ Reporting

Inspections Dashboard enabling high-level view of HSEQ data.

Full suite of reports, all of which are exportable, to include the following:
- Inspections Scheduled/ Completed
- Open/ Closed Defects
- OUtstanding Actions/ Defects
- Audits Failed
- Target Report
- Questions report, breakdown of responses
- Compliance Score Reporting; Operative, Supervisor, Region

Risk Assessment

- Create, configure & manage Risk Assessments across Work Streams
- Full version control, enabling live updating of Risk Assessments
- Automated insert of risk assessments into Job Pack, enabling viewing from site of previously updated Risk Assessments
- Change in site/ working conditions or visitors can be easily added to live risk assessment, removing the need to re-complete the whole risk assessment

- Compliance reporting to show where RIsk Assessments haven't been done
- Email alerts/ push notification messages triggered by certain Risk Assessment questions
- Generate shareable PDFs

Lone Working

- Manage lone worker activity from the portal & the app
- Automated send of email alerts/ push notification messages to agreed chain of command when Lone Worker non-response is triggered

- View the whole team on a map to see where your Lone Workers are
- Monitor staff in real-time, rather than waiting for activity
- Send an alert/ message to a lone worker real-time

Incident Manager

- Record incidents; report on witnesses, injuries & vehicles involved
- Allocate & Complete Actions
- Categorise incidents for easier reporting
- Quick recording on app
- Enable multiple reports against a single incident

Briefings

- Send and receive real-time Safety Briefings & Toolbox Talks to your field Operatives
- Attach supporting documents, photos & videos to Briefings within the app
- Setup multiple distribution lists
- Read and sign for briefings
- Set Urgent briefings to force mandatory shut off of all work until the briefing has been read and signed for
- Populate Training records with briefings received & signed for

Skills

HAVS

Our unique position in the industry means that we develop specialist modules quickly as and when industry requires.

Our most recent innovation is our HAVS module:

Setup Exposure Tools & Point Thresholds
Setup in accordance with legislation
Update new equipment real-time
Administrable only by Super User

Record Exposure Time per Job
Mandatory progressive recording

Report & Track Exposure Time Exceptions
Notify SHEQ lead of anomalies

Depotnet Skills & Competence Modules.

- User / Roles Matrix
- Roles / Skills Matrix
- Issue QR code to each Operative to enable on-site scanning of Competencies
- Links Competencies to SoRs to prevent work being scheduled to non-competent Operatives/Gangs
- Competence Report & Alerting of expiries

Timesheets

Fleet & Plant

Time Management Module.

- Full Timesheet submission and validation process
- Draft Timesheet option to minimise manual input
- Management of Time Type activities
- Exportable Daily Timesheet data
- Link into roster patterns

Vehicle/ Plant Safety Checks.

- Full configurable vehicle and plant checks
- Check sheets completed from the field with photo capture Manage defects and faults
- Manage inspection schedules, MOTs, Tax, Services and Calibration Dates
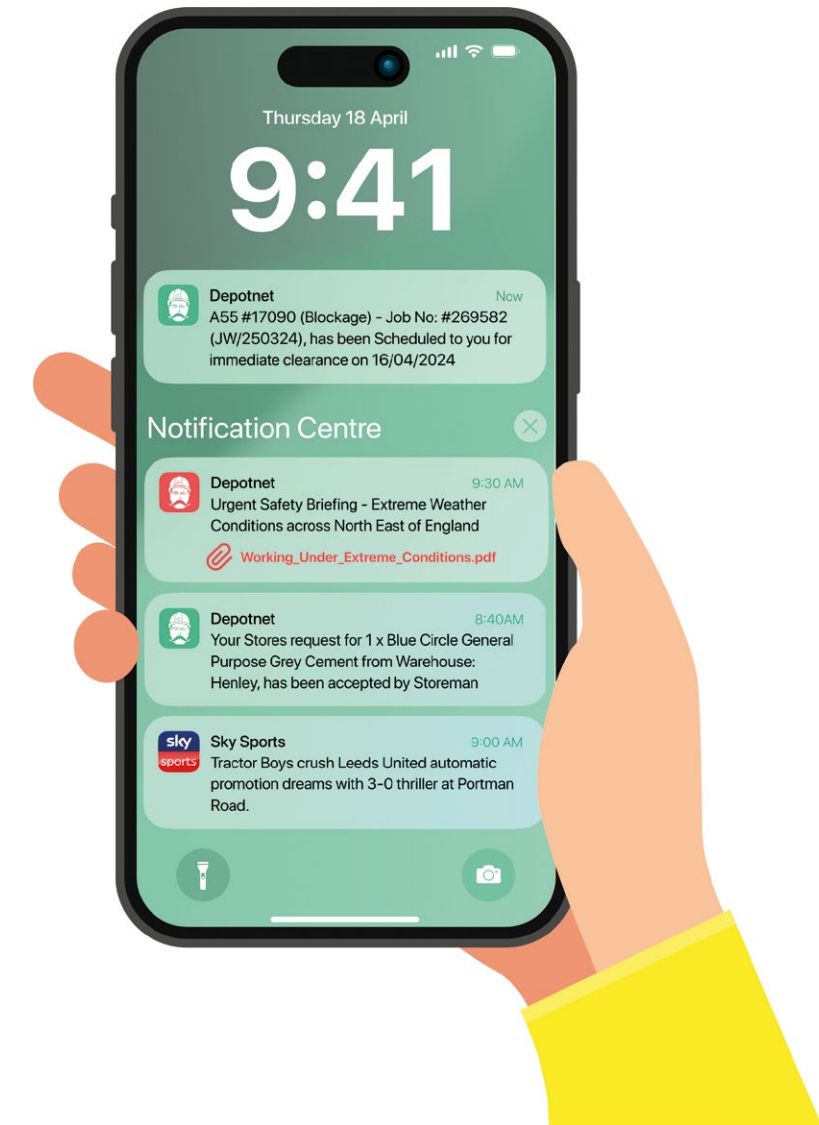

Power BI

Seamless integration with the Depotnet API.

- Full access to the depotnet BI API
- Access data for integration with business intelligence & analytics services
- Set a data-refresh rate that suits your business & workflow
- Select from different format options to suit your requirements
- Integrate with any 3rd party BI tool

Push Notifications

Utilise the new Push Notifications feature to update your field teams and also mobile staff on issues & alerts - examples.

- New Jobs added to the Schedule
- Updates on Cost/Date Variations raised
- See Blockage clearances scheduled
- Get updates on Vehicle Faults assigned
- View new Timesheets sent for approval
- View & Respond to Stores requests
