

# PLANNING FOR AMP8 - DO YOU WANT TO SAVE TIME AND MONEY?

## Asset Maintenance & Repair

Cheaper ♦ Safer ♦ Quicker

It's time to think differently

Many water companies and contractors are choosing to work with Pontoonworks for repair and maintenance projects. Delivering bespoke solutions, we facilitate the works without the need to decommission assets, providing considerable time and cost efficiencies. With over 20 years of experience we deliver the safest access across all bodies of water.

### Clarifiers

Pontoonworks use their DWI Reg 31 certified blue pontoon in clean water sites. The proven solution provides safe working platforms for cone replacements, valve repairs and de-veg work without the need to decommission and drain. **Severn Trent** stay on top of asset maintenance with a cost effective rotation of pontoon across their sites.

### Reservoirs

All over the UK, Pontoonworks delivers maintenance solutions across open water. Remote locations cause no problems, we provide access for over pumping and outfall repairs in lochs for **Scottish Water**, to pump towers for **Welsh Water** and pipe bridges and access deterrents for **Anglian Water**. We have a tried and tested solution for your access challenge.

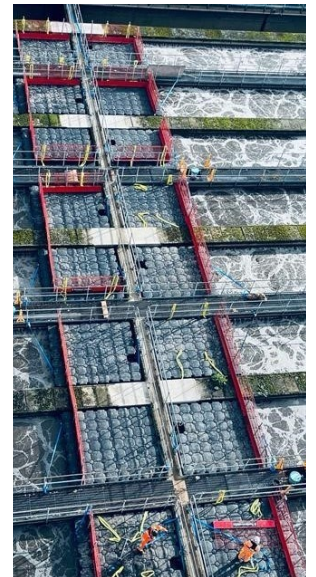

### Settlement Tanks

Pontoonworks, a framework service provider to **Wessex Water**, provide tank access for maintenance and repair of: gearboxes, scum boxes, centre bearings, scraper boards, stilling boxes, coping stones, electric motors and scum boards as well as de-ragging and de-vegetation. Without the need to decommission and drain, they reduce their tank maintenance, on average from one month to one week and with a cost saving of up to 70%.

### Aeration

Pontoonworks provides access in Aeration Tanks, which can remain live throughout the works. **Thames Water** used a pontoon working platform to provide unfettered access for the overhaul of a large live asset. The scope of works only took four months with little disruption. For **United Utilities** we provide anything from access platforms for de-veg work to covering a full aeration tank the size of a football pitch for concrete repairs.

### Setting the standards

Pontoonworks has an ongoing commitment to excellence in health and safety. As such, our installers have CSCS skilled worker accreditation and are EUSR qualified. Pontoonworks also produce a unique stability engineered report, as standard in all our Works Package Plans, giving clients reassurance that they receive the safest access solution.
