

Mint Cash

**Backend Setup Guide
(Server-side script)**

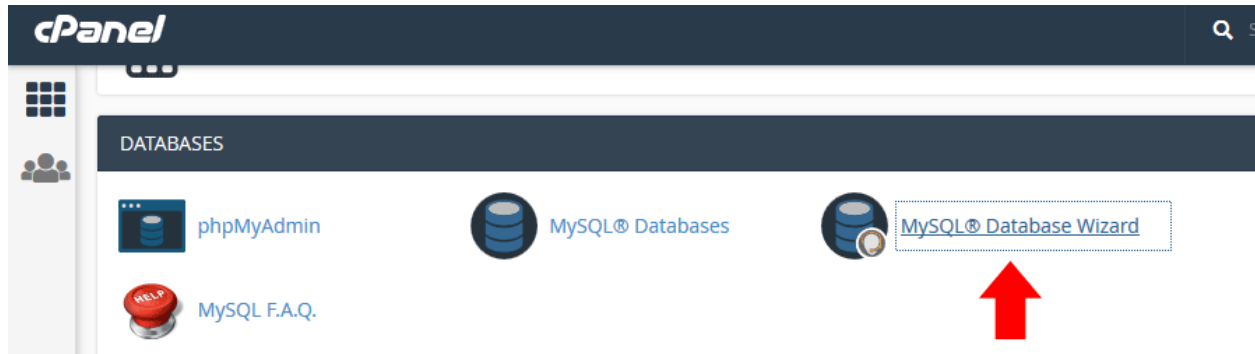

File upload

Open your hosting panel and upload your script to the web directory and change document root to script's **public** directory:

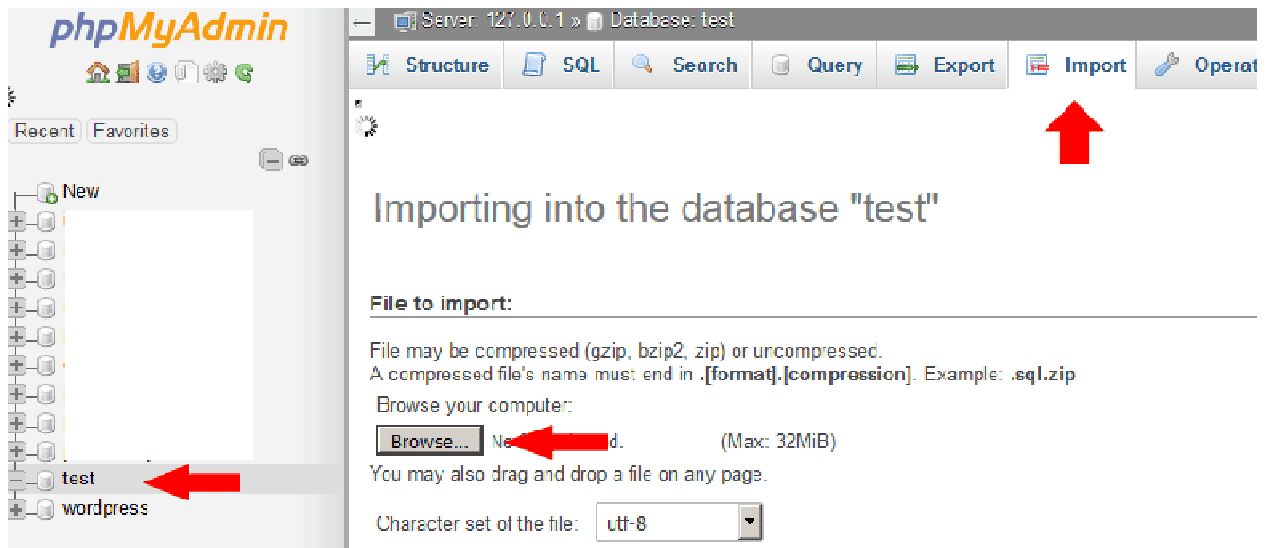

Database

Create a database for your backend:

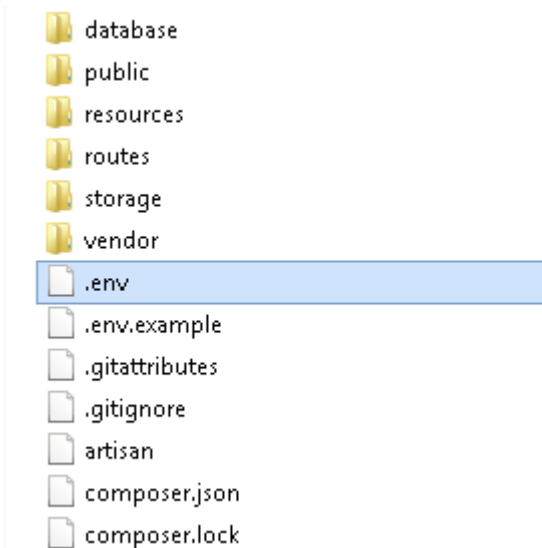

Import mintcashdb.sql to your database:

Configuration

Update your `.env` (from script root directory) file with the database information:

Change `APP_URL` with your domain name and update `.env` file with your database access credentials:

```
APP_URL=http://localhost.com
TIMEZONE=UTC
DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=test
DB_USERNAME=root
DB_PASSWORD=password
```

.env file

That's all

Now you can login your admin panel by accessing:

`http(s)://your-domain-name/login`

Admin email: admin@domain.com

Admin password: adminpass

Don't forget to update your admin credentials from:

`http(s)://your-domain-name/members/admins`
