Ovation – Demo Script

Be sure to create an Ovation Speech ahead of time from the web portal or from the in-app Manage menu and import text for around 1 minute of speaking time. You should also create and import around 2-3 slides to match the text.

1. Initial Demo Setup.
 - a. Complete Room Setup for the VR platform.
 - b. Ensure the Windows system audio and microphone are set to the VR headset.
 - c. Launch Ovation.
 - d. Sign in.
 - e. Mirror the application to the monitor in the User->Performance menu.
 - f. Load the Conference Room (Ctrl + Shift + C) or Boardroom (Ctrl + Shift + B).
2. Demo starts (before putting on headset).
3. This experience is called Ovation by VRSpeaking.
 - a. It enables you to improve your public speaking skills by simulating a highly realistic speaking environment and audience, to whom you'll deliver a speech. Ovation allows you to import Word documents and PowerPoint files and use them on all sorts of familiar tools, like teleprompters, notecards, and projector screens. Your speech and dozens of analytics are recorded for playback and evaluation. Among many other training tools, Ovation checks the words you speak for fillers ("um", "like", etc.) and warns you if you are not gesturing with your hands or holding the mic to your mouth.
 - b. [If eye tracking is enabled] With eye tracking, Ovation also knows where your eyes are looking in the venue. If you stare too long at any of your speech tools, such as the teleprompter or slide projector, they will turn red and warn you to shift your attention back to the audience.
4. Familiarize the person with the headset and controllers.
5. Put person in the headset.
6. If they are not standing in the central speaking location, teleport them there. Ctrl + Shift + T
7. Look around, you're in the [Hotel Conference Room] or [High Rise Boardroom]. Say hi to your audience!
8. Let's select an avatar to represent you. We'll randomly choose one. Tell me when to stop.
 - a. Cycle through random avatar appearances Ctrl + Shift + A.
9. Now it's time for you to give a speech! Would you like to speak in the Hotel Conference Room or the High Rise Boardroom? Great, hold one second while I get that prepared for you.
 - a. If they're already in the venue they want to speak in, Ctrl + Shift + S to reset the speech settings.
 - b. If Hotel Conference Room, Ctrl + Shift + C. Once there, Ctrl + Shift + S.
 - c. If High Rise Boardroom, Ctrl + Shift + B. Once there, Ctrl + Shift + S.
10. Take a look at your right hand. You are holding a:
 - a. If Hotel Conference Room, combo slide changer and laser pointer. This will help you change the slide on the projector (behind you) and confidence monitor (in front of you) by pushing the thumbpad/stick left or right. **IMPORTANT: Make sure they get comfortable with this before moving on.**
 - b. If High Rise Boardroom, notecard. This has the text of your speech you'll be giving shortly. You can change to the next and previous pages by pushing right and left. Go ahead and test it out. **IMPORTANT: Make sure they get comfortable with this before moving on.**
11. Take a look at your left hand. You are holding a:
 - a. If Hotel Conference Room, microphone. Remember to keep it close to your mouth at all times during your speech. If you don't, say, because you are gesturing with that hand or forgot you were holding one, it will flash red and vibrate in your hand, reminding you to bring it closer.
12. Now take a look at:
 - a. If Hotel Conference Room, the teleprompter. It will begin scrolling when your speech starts in a moment. You can set the scrolling speed by pushing up and down on the thumbpad/stick in your

right hand (the one with the slide changer). For now, let's make sure it's set to start at speed 3.

IMPORTANT: Make sure they get comfortable with this and set it to 3.

13. Alright, it's time to wow this virtual audience! After the countdown ends you will get about 1 minute to record your speech. Good luck!
14. Recording countdown starts Ctrl + Shift + R.
15. Recording lasts for 1:05 seconds and then automatically stops. (Ctrl + Shift + E if not).
16. When the recording has finished saving it will automatically begin playing back. (Ctrl + Shift + P if not).
17. Move the user around the room to see the playback from [4] different perspectives. Ctrl + Shift + Z.
18. When back to front of room, toggle heatmap modes (Off/Draw During Playback/Final) Ctrl + Shift + Q.
19. Playback should end around now.
20. Open Analytics menu Ctrl + Shift + L.
21. During your speech Ovation captured all sorts of analytics related to your performance.
22. Keyboard ↑ or ↓ Arrows to scroll the analytics menu while describing what they're seeing.
23. Ctrl + Shift + '+' (plus sign) to add an additional recording Under Review, if available.
24. I just added the previous person's recording to the recordings being reviewed. You can now see tables and graphs in this menu enabling you to compare the recording you just created with theirs. You can add as many recordings as you want for review. If I were to add previous recordings of speeches you had given, this Analytics menu would give you a good understanding of how certain metrics have improved over time.
25. Ctrl + Shift + '-' (minus sign) to remove the previously added recording(s) Under Review (we only want to review the recording the demoer just created when looking at the Grades menu next).
26. We'll now take a look at your grade, which is calculated based on the analytics we just saw.
27. Open Grades menu Ctrl + Shift + F.
28. Great! You scored a ___%! [With more practice you can get that up to 100%!]
29. Demo Ends.
