

# Stake Copying Instructions

If you have already staked tokens on mainnet, the upgraded staking contract does not automatically inherit the balance of the old one, as this would present security and incentive problems. Instead, the Keep team has designed a *stake copying* process that allows existing stakes on the old contract to be immediately copied to the new contract while the stakes on the old contract undelegate. Note also that the token dashboard now displays tokens staked on the new contract, and tokens staked on the old contract will not appear as staked.

If you have staked tokens on mainnet that have not yet been fully undelegated, you will see this banner when you first load the dashboard after the upgrade:

Clicking Upgrade My Stake will show you the upgrade flow:

At this point, you will be able to choose from any existing delegations that you have. Most stakers will only have one:

- BALANCE
- UPGRADE
- REVIEW
- COMPLETE

✕ CLOSE

### Stake balances to be upgraded.

Choose the stake delegation to be upgraded.

CONTINUE

Once you select a delegation, the upgrade flow will give you two options: copying your existing stake balance to a new delegation (the recommended approach), and undelegating your stake:

✕ CLOSE

## Choose how to move your current stake to an upgraded delegation.

RECOMMENDED

**Copy stake balance to an upgraded delegation.**

Avoid waiting the undelegation period and copy over your stake balance to a newly upgraded delegation. Your current stake will undelegate.

**Undelegate and wait the undelegation period to stake to a newly upgraded delegation.**

Undelegate and wait the 60 day undelegation period in order to stake on the upgraded staking contract. You can start new delegations with any tokens not already staked.

BACK REVIEW STAKE

If you choose to follow our recommendation and copy your stake balance, the new delegation will be fixed at the copied amount until the old stake finishes undelegating. At this point, the dashboard will let you send the undelegated tokens to the stake copying contract, which will unlock your copied delegation for normal usage. This screen will allow you to confirm the details of the delegation you are choosing to copy:

✕ CLOSE

### Review your stake details below.

This stake balance will be copied to a newly upgraded delegation. Your current stake will start the undelegation process from the old staking contract.

BACK CONFIRM UPGRADE

Once you click to confirm the upgrade, two transactions will need to be confirmed with your wallet: one undelegating your stake from the old staking contract, and one creating the copy of that stake on the new staking contract. Once you've finished, you can go through the same process for any other delegations by opening the banner again.

If you choose to undelegate instead of copying the stake, you will get a single wallet confirmation, to undelegate your existing stake. You can then create a new delegation on the new staking contract with any available balance, and recover the undelegated amount after the undelegation period of 60 days has elapsed. Again, once you've finished this flow, you can go through the same process for any other delegations by opening the banner again.
