## **COMPANY OVERVIEW**

### About Us

PT. Global Sindo Perkasa established since September 2023 is a company engaged in the fields of large trade, mechanical machinery, electrical and its spearparts. PT. Global Sindo Perkasa answers the need to become the largest Distributor Company by supplying goods to industrial area; Cement Industry, Mining, Pulp & Paper Industry, Chemical Industry, Contractors, Food & Beverage Industry, Sugar Industry, etc.

## **MISSION & VISION**

### Mission

A strong, sturdy and sustainable partnership is the foundation that we will build and hope for, so that it can provide sustainable profits in maintaining business continuity and be able to contribute to economic development both within the company and global society.

## Vision

We are dedicated to growing into a leading trading company for machinery and equipment, committed to sustainable development and continuous innovation amidst change

## **BUSINESS OVERVIEW**

### Core Values

### Partners

KAIFENG PENGZHUO AUTO PARTS CO., LTD.

# CONVEYOR BELT

For conveying combustible materials such as coal dust, gas, fertilizer, etc., it is very important to choose SINOCONVE refractory conveyor belt. It is mostly used in wood, paper and pulp, sugar and food, recycling and fertilizer plants.

The SINOCONVE standard. It is based on DIN 22131 as well as on European standard EN

ISO 15236, type A1.SINOCONVE can supply most existing belt types following different

Please contact us for enquiries about belt types according to the EN types A2, for belts wider than 2400 mm, or other types that differ from sinoconve's standard

Top rubber cover

EP fabric

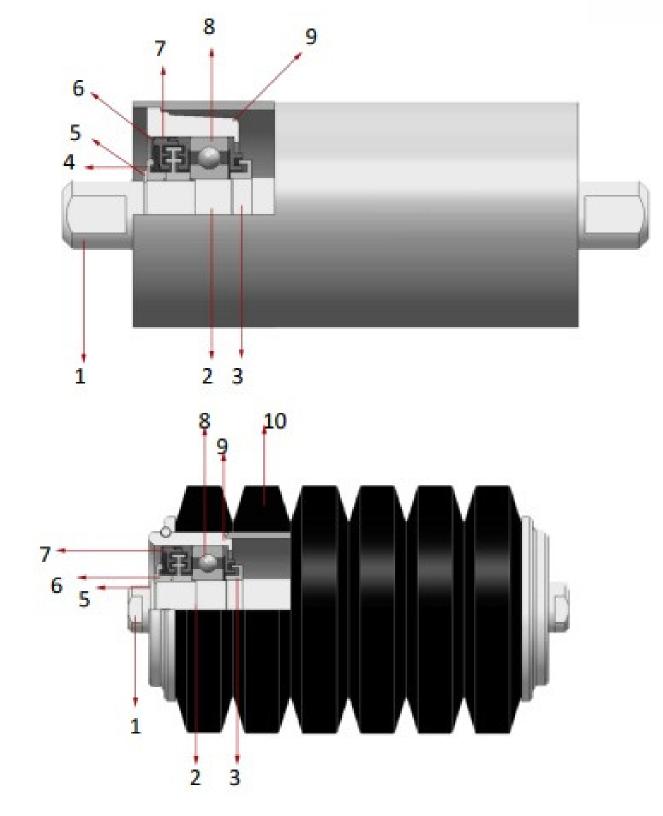

skim rubber

Bottom rubber cover

Rubber moulded edge

# **CONVEYOR ROLLER**

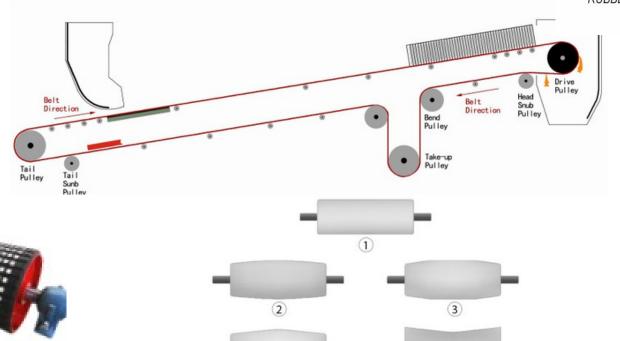

### **CONVEYOR ROLLER**

SINOCONVE roller are designed and manufactured with the national standard, which have the performance of water-proof, dust-proof, minimum rotation resistance and high resistance to vandalism

# CONVEYOR PULLEYS

(4)

The conveyor pulley shells are one-piece rolled with single seam weld. The fabrication is accurate in concentricity. All of the shells are static balanced and can be dynamic balanced if required. All conveyor pulley shells are seam welded by MIG process. Continuous wire feeds are employed during the welding process, utilizing an inert gas atmosphere, which guarantees the maximum uniformity and resistance of weld.

(5)

#### Lagging options

Snub and bend pulley

Min. Thickness:6.3mm

HERRINGBONE

- Snub and bend pulley
  Min. Thickness:10mm
- Min. Thickness:10mm

DIAMOND
 Bidirectional
 Min. Thickness:10mm

- Pulleys greater than 475 PIW
  - Min. Thickness:16mm

Drive pulley

Min. Thickness:10mm

#### ARROWHEAD CERAMIC

- Pulleys greater than 475 PIW
- Min. Thickness:16mm

# **HOT VULCANIZER**

#### LBD Series Electrothermal Explosion-proof Vulcanizer

LBD electrothermal explosion-proof vulcanizer used for mining is a movable light-type curing machine used for vulcanization gelatinization joint of conveying belt. It has the explosion-proof electrothermal structure and hydraulic pressure plate as the pressure device, which is mainly used for vulcanization gelatinization joint of canvas, nylon, polyester, steel rope core and other belts in coal mine, and power plant, wharf, chemical industry, metallurgy, building materials and other departments with the same explosion-proof grade as Class I places

#### **DRLQ Vulcanizer**

It is mainly made of light aluminum alloy, which is characterized by small size, light weight, easy handling, simple and reliable operation. In addition, it has such features as fast temperature rise, uniform temperature and high thermal efficiency. This product is used for joints of the belts used in metallurgy, power plants, ports, chemical industry and metal mines. The adhesive bonding with this product not only makes the joint smooth like one part of the original belt, but also reduces wear of the roller and extends the use life of the conveyor and belt.

#### **BPJ Belt Stripping Machine**

It is a special kind of electric stripping machine used before adhesive bonding of nylon, canvas,steel rope core and other transportation belt. This device can automatically clamp and strip the cover layer off the core layer. It has such advantages as strong traction, large stripping area and fast speed. In addition, as it is easy to operate and safe and reliable in performance, it can greatly reduce the labor intensity of the operato

## **TUBELESS WHEELS**

Our company Product mainly include truck & bus wheel, tractor wheel, otr wheel, forklift wheel, agricultural & forestry machinery wheel and aluminium wheel. advance technology and strictly quality control methods, our product include eight series with 200 different type and product has passed SGS and TUV certificate and registered famous brand. good quality and finishing make product popular in and outboard

# INNER TUBE

### Inner Tube

- Match the corresponding inner tube according to the tire size.
- In case of air leakage of inner tube, it will cause early damage to the outer tube
- Butyl rubber inner tube has excellent temperature resistance and air tightness performance. And High-speed tires should be equipped with butyl rubber inner tubes.
- If the inner tube is required to be stored separately, it should be inflated with an appropriate amount of air, and it should not be laid horizontally or folded. If it is not stored separately, it should t be placed in the outer tube and inflated appropriately.

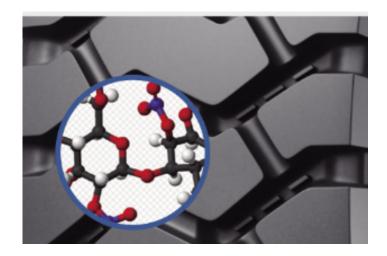

#### Excellent traction and durability

## Features

Benefits

#### Special tread compound

Improved compound for tear & cut resistance under off road condition

Long life and good wear

#### "~" Shape deep block tread pattern design

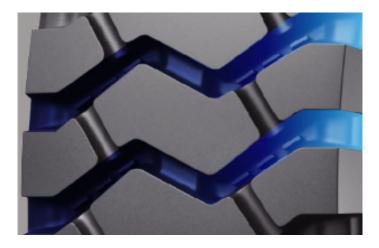

Creates big biting edges for traction

Excellent traction and control

## Open and wide grooves design with stone ejectors

Reduced heat accumulation and prevents stone pinching

Good mileage and groove bottom cut resistance

## MAGLEV TURBO VACUUM PUMP

## Greatall 😽

#### **MECHANICAL STRUCTURE**

### **PRODUCT ADVANTAGES**

Active magnetic bearing system, no abrasion, no need for lubrication and maintenance.

•Eciency of permanent magnet high-speed synchronous motor up to 98%.

•Direct drive eliminates need of gear box and lubrication system.

•High-performance frequency converter automatically adjusts motor rotate speed, multiple control modes aare available.

•Intelligent control system monitors the operating status of the vacuum pump in real time, integrated aanti-surge system ensures safe and stable operation.

•Optional air-cooled or water-cooled design.

•Multiple observation windows and inspection windows facilitate daily maintenance and impeller cleaning.

•Dual protection system of UPS and mechanical protection bearings to ensure safe operation.

•Three-stage gas-water separator to ellectively protect the operational reliability of the impeller. •The separator is equipped with two filtrate pumps as standard, one work and one standby for higher areliability. •Integrated and compact design, small footprint, less space consumption, and convenient and quick amaintenance.

•Compared with water ring vacuum pump, ellciency of maglev turbo vacuum pump 30~60% higher.
