

Printer Instructions

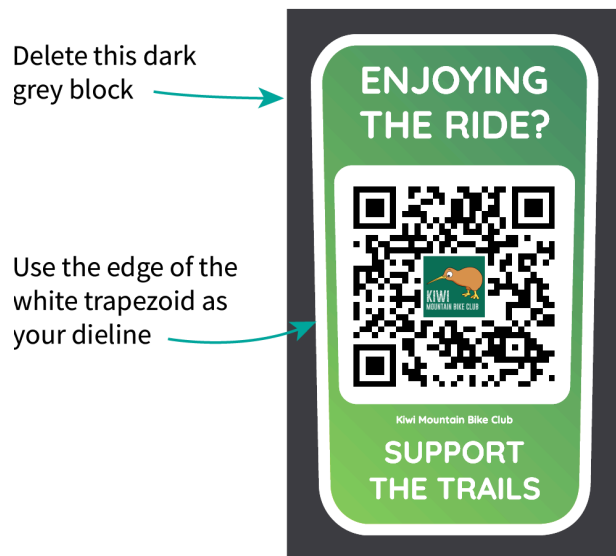

Custom Bike Top-tube Sticker

File type: SVG (Generated via Hivepass, the organisation's management software. It is unlikely they will be able to supply you with a different file type)

Finished size of each sticker: 40mm wide x 68mm high

Production: Laminated print on vinyl, cut to shape

This SVG file is set up so that it should require minimal editing. The outside of the white box serves as a dieline, so all you need to do is delete the dark grey background and duplicate the artwork as necessary.

For your information, the sticker will be located on the top-tube of a mountain bike (or thereabouts) which is why a laminated vinyl sticker is probably the best option. These stickers need to be easily applied by the local bike shop or rental company that are going to use them.

Here's an example of the sticker in situ:
