

Smart Scenario Practice and Accurate CPR Feedback

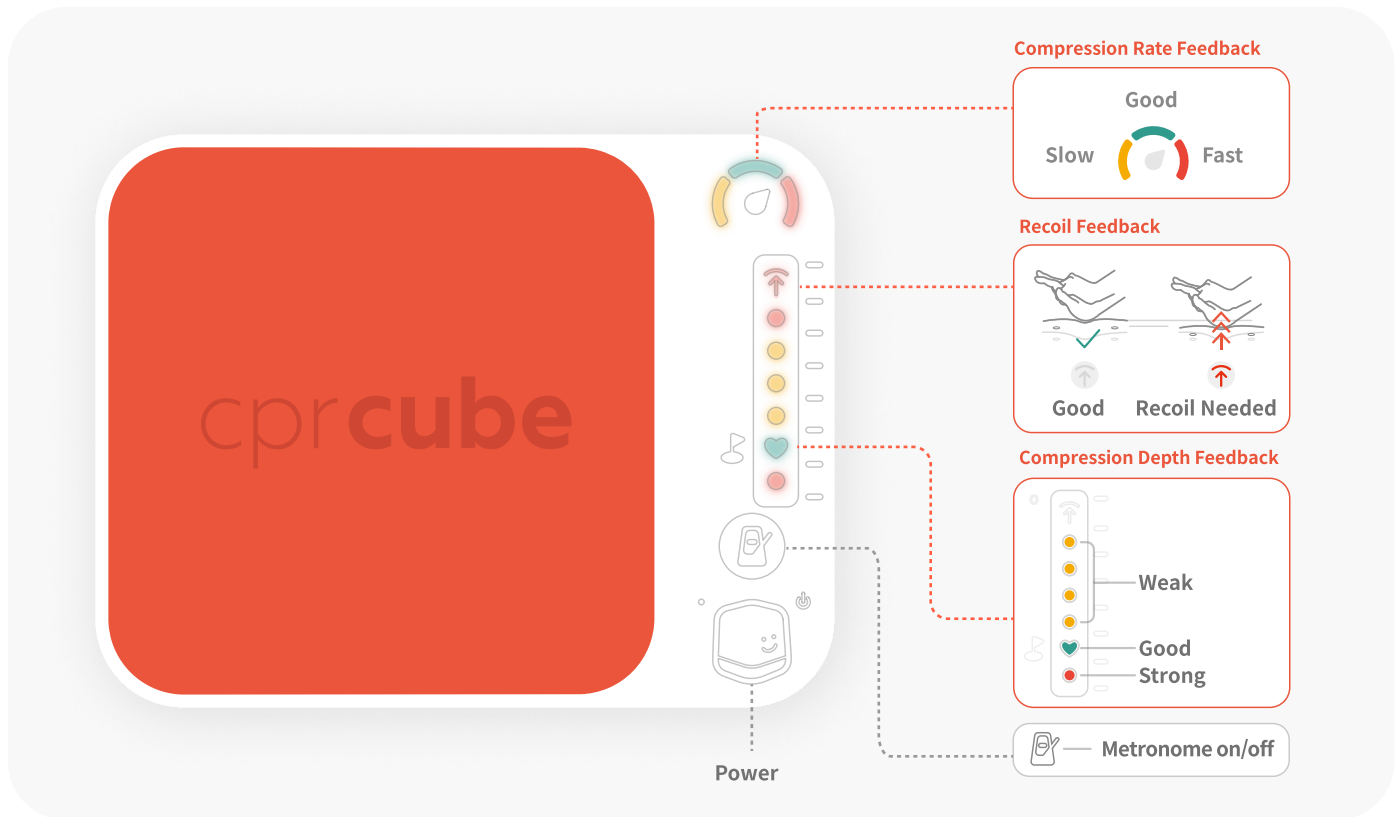

cprcube PRO

Experience innovative CPR learning with
the completely new cprCUBE PRO and Teachers Pack.

Completely New LED Feedback

The LED feedback has been moved next to the compression area, allowing you to understand chest compression quality more easily and intuitively than before. It includes real-time sound feedback on compression success/failure, depth, recoil, speed, and combos, along with a metronome guide.

Complete High-Quality CPR Training from Start to Finish

With the introduction of the mini AED trainer, you can learn the entire CPR process in depth.

The mini AED is sold separately.

From app-based simulations to quantitative assessments

Choose modes based on educational goals to enrich your teaching content.

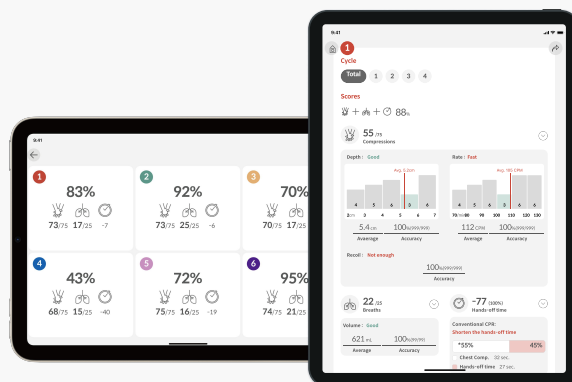

Scenario mode

Interactive education is possible through a touch interface, allowing for highly focused learning of the CPR process.

Feedback mode

Evaluate the CPR learning process in real-time using sensors, and store results individually for easy review and management.

Package for teachers, Teacher's Pack

Freely configure with cubes, mini AED trainers, and tablet PCs according to your needs.

With the Teachers Pack, mobile education is no problem.

Basic Package
