KASHIFUL HAQUE

I solve problems! (and make some)

ABOUT ME!

I am a student (wants to be a Software Engineer who can solve real problems) dedicated to building web and meaningful Android apps.

I am passionate, hardworking and extremely driven. Also, I can learn a new skill pretty swiftly.

SKILLS!

- Java (2013 - present)
- Problem Solving skills using Java
- Data Structures & Algorithms
- Native Android development using Java
- JavaScript, including ES6
    - Front-end using Vue.js
    - Back-end using Node.js
- HTML5 & CSS3
- C/C++ (2013 - 2015)
- C# (2014 - 2015)
- Python (2018)
- Kotlin (2019)
- PHP (2013 - 2014)

OTHER SKILLS!

- Sound Design using FL Studio (Xfer Serum)
- Graphic Design and Web/App mockups
- Video Editing
- Game Development using Unity 3D

LANGUAGES!

- English - Full proficiency
- Hindi/Urdu - Native
- Bangla - Proficient
- Japanese - Intermediate

WORK & PROJECT HISTORY!

My own portfolio website [www.ifkash.xyz]
January 2020 to forever, hopefully!

- Built this cool little website to showcase all my stuff in one place.
- It may seem pretty simple (and bland?) at first look, but there lies some serious workload on the backend which I use to rapidly prototype on my **Node.js** apps.
- Oh and I have built it using modern web technologies like **Vue.js, Gridsome, Firebase** & **Bulma CSS**

An e-Commerce website [www.cottongallery.in]
October 2019 to November 2019 (still in-charge for DevOps)

- Built this e-Commerce website for a local shop at the place I live.
- Built it using not-so-modern, but trusty old web technologies like **PHP, WordPress** & **WooCommerce**
- Hosted it on **DigitalOcean** linked it with the required services like **RazorPay's** payment gateway, **Mailgun's** SMTP server & **Shiprocket's** Logistic and Management.
- I am responsible for the smooth sailing of the server, all kinds of server management, reboots, crashes, security patches and system updates. The server is **Ubuntu Server 18.04 LTS**.

A meal management system [Android App - Mealy]
April 2018 to April 2019 (I started learning Android with this)

- Built this Android app for the students at my University hostel.
- This app is used to track the daily meal status of all 400+ hostelers
- Built it using using the **Java (native Android)** & **Firebase** as for the backend.
- This production app is completely open-source on my GitHub (@kashifulhaque)
- I did use bits and pieces of **MVVM** design pattern in order to structure the code of this app. Despite being my first production Android app, I did learn the concepts of **Network requests** and parsing JSON data sent back as a response from the server & **Glide/Picasso** Image loading library.

more projects on www.ifkash.xyz (in order to keep CV in one page)

ACADEMIC BACKGROUND!

University of Calcutta
Bachelor of Technology in ECE, 2016 - 2022
- I absolutely loathe this. This was a mistake!

Kendriya Vidyalaya No.1, Kanchrapara
High School, 2015

Kendriya Vidyalaya, Kankinara
2013

OTHER SKILLS & ACHIEVEMENTS!

- I was the school topper in International Maths Olympiad & National Science Olympiad back in class 8, 9 & 10.
- I used to make music back in my spare time. (2016 - 2018)
- I like playing Minecraft and I'm also skilled in deploying and managing high load Minecraft servers.
