BouMatic®

For the life of your dairy

Flo-Star® Xtreme

REVOLUTIONARY MILKING CLAW

Flo-Star® Xtreme

REVOLUTIONARY MILKING CLAW

Flo-Star Xtreme is bringing a revolutionary new design to a milking claw, but with all the same enhanced performance. The new low profile, lighter weight concept with improved angle of the inlets brings amongst many advantages a higher milkflow rate, a balanced alignment and a stable vacuum.
Receive the excellent milkability and comfort you come to expect from BouMatic.

'Xtreme' milking performance with unprecedented "Gently, Quickly, and Completely" results.

- **Weighs only 9.5 oz. –** The Flo-Star Xtreme is 3 oz lighter than the Flo-Star MAX. A lightweight claw can reduce operator fatigue during long milking shifts and allows more of the weight distribution to be in the shell and liner, reducing unit alignment issues.
- **Low Profile –** The Xtreme has a height of only 5.2 inches, making it 1.4 inches shorter than the MAX. Perfect for small breeds and for low-hanging udders.
- **Air Inlet –** An air inlet has been designed into the claw resulting in a stable vacuum to the claw at all times. This means less bouncing of the claw and a more gentle milking for teat ends.
- **Patented x-crossed inlet design –** Small improvements to an already great design; improved "cow fit"; fits wide, narrow, short or long udders and uneven teat placement.
- **Engineered resin construction handles 7,200 lbs. of direct pressure –** Stronger than stainless steel claws, guaranteed against breakage for 2 years.
- **Milkability –** More stable flow of air out of the claw maintains vacuum stability. The milk quickly exits the claw. Even high producing cows will not flood the Xtreme.
