Vitamin B Complex

Calier B8 Vitamin B Complex

About Vitamin B Complex
B vitamins are essential for sugar metabolism, nerve impulse transmission, oxygen metabolism, and converting food into energy by aiding the absorption of proteins, fats, and carbohydrates.

They are necessary for forming coenzyme A (CoA), involved in the metabolism and synthesis of carbohydrates, proteins, and fats. They play crucial roles in cellular energy metabolism, DNA repair, detoxification, and the production of steroid hormones synthesized by the adrenal gland, such as sex hormones and stress-related hormones.

They support the growth, maintenance, and reproduction of all body cells, positively influencing their development, function, and regeneration. They contribute to the normal development of the nervous system, red blood cell synthesis, and proper gastrointestinal tract function.

COMPOSITION

Each ml contains active substances:
Thiamine hydrochloride (Vitamin B1) ..... 10,4 mg
Riboflavin sodium phosphate (Vitamin B2)..... 4,20 mg
Pyridoxine hydrochloride (Vitamin B6)..... 4,20 mg
Cyanocobalamin (Vitamin B12)..... 0,05 mg
Nicotinamide..... 20 mg
Dexpanthenol..... 4,30 mg

Therapeutic Indications
Treatment and prevention of vitamin B group deficiencies.

Withdrawal Periods
Meat: Zero days
Milk: Zero days
