BouMatic®

For the life of your dairy

STREAMLINE™ 360EX

EFFICIENT & DURABLE

EXTERNAL ROTARY

STREAMLINE 360EX

CHOOSE PERFORMANCE & DURABILITY

The Streamline 360EX external rotary milking platform is designed for commercial dairy farms and large family farms milking 250 to 2000 cows. The uncluttered platform design with new integrated cabinets at each stall is the foundation of the Streamline 360EX's innovative concept.

Functional, comfortable and efficient

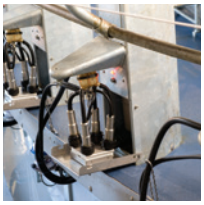

- **Incomparable cow traffic -** innovatively designed entrance lane. The perfectly open vision, with low profile cabinets and large openings, invites the cow to the platform, free and safe.

- **Safe & comfortable for operator and cow -** offset top and bottom rear rails allow for perfect cow positioning and **ultimate udder access.**

- **Strong, heavy-duty platform -** the platform moves on 2 circular I-beams and on exclusively designed nylon rollers without lubrication. The platform assembly turns on a rail track.
- **Integrated cabinet at each stall -** housing automation components, controls, cylinders and displays as well as a jetter tray which remains closed during milking for perfect hygiene.

- **Smooth and flexible operation -** electric drive system with adjustable speed.
