

BOPP Film

Clear, two side heat sealable, one side corona treated, one side medium hot slip

Opp BaseFilm m

Description

Opp BaseFilm m is a transparent film with two side heat sealable and one side corona treated. Its non-migratory additive package delivers medium hot slip properties and high wettability. The non-treated face confers a broad heat seal range. The corona treated side is located on the outside face of the reel.

Main Characteristics

- Free of migratory additives.
- Medium hot slip for excellent stackability.
- Outstanding processability in metallizing processes.
- Highly wettable treated face.
- Excellent flatness and dimension stability.
- Broad heat sealing range.

Applications

This product is designed as an outer web in laminations which demand a balance of high packaging processability and excellent stackability in bundles, requirements found in applications such as pasta packaging at different packing temperature conditions. This product can also be used as an excellent base film for aluminum metallizing. Its seal properties allow it to be used in multiple VFFS or HFFS packaging machinery, in fin and/or lap seals. It meets FDA regulations for direct food contact.

* Important Considerations

It is recommended to store this material at conditions not exceeding 86°F, at shadow and with a relative humidity of 60%. To protect against humidity and avoid film blocking, rolls should stay covered with the plastic overwrap when not in use.

The information in this data sheet is based on tests carried out in our laboratories and is intended to be used for reference only. It should not be construed as a guarantee of performance. It is recommended that the user exceutes the necessary tests to ensure adequate performance for the intended applications.
