

BOPP Film

One side treated, both sides heat sealable, high transparency, optical brightener

Description

Opp ClearFilm C is a heat sealable film on both sides, with improved transparency and high gloss. It contains antistatic and optical additives. The corona treated side is located on the outside face of the reel.

Main Characteristics

- Excellent gloss and transparency.
- Optical brightener.
- Good antistatic and slip properties.
- Outstanding flatness and dimensional stability.
- Outside face treated for the application of inks or adhesives.
- Broad side weld range.

Applications

This product is designed to be employed in a great variety of flower packaging due to its excellent gloss and high transparency which can be observed in stacked piles of this material. The non-treated copolymer face confers ease of fusion generating more uniform and resistant side welding. It meets FDA regulations for direct food contact. Its antistatic properties do not allow dust pick up on the film surface thus keeping its excellent optical properties throughout the product usage time.

* Important Considerations

It is recommended to store this material at conditions not exceeding 30°C, at shadow and with a relative humidity of 60%. To protect against humidity and avoid film blocking, rolls should stay covered with the plastic overwrap when not in use.

The information in this data sheet is based on tests carried out in our laboratories and is intended to be used for reference only. It should not be construed as a guarantee of performance. It is recommended that the user exceutes the necessary tests to ensure adequate performance for the intended applications.
