

# Yanuar Arifin

Android Developer

## Summary

I am a software developer with 3 years of experience in developing Android application and 5+ years of experience in software development. I usually develop an Android application using Java, but currently I learned and developed it using Kotlin. I am always committed to design a better architecture and follow material design pattern for my apps. I am currently focusing on MVVM architecture pattern, combined with Dagger2, Retrofit2 and Android Architecture Component. I designed, developed, bug fixed and maintained corporate level applications.

## Experience

Aug 2015 - present

### Android Developer

PT Nuwira Integrasi Mandiri

- I developed new Honda E-Care android application that helped our client's users to book service. I used MVP architecture pattern combined with rxjava2, dagger2 and realm. I built CI/CD using Gitlab and Jenkins to publish a testing release on Beta by Crashlytics and beta release on Google Play Store.
- I designed and developed warranty management system android application for our client's technicians, so they can get customer information who claims warranty due to their problem. I also built CI/CD using Bitbucket pipelines.
- I redesigned and rebuilt field service application that helped our client's technicians to collect merchant data. The application has a feature to track the real time location of technicians.
- I maintained our client's old CCRM (Contact Customer Relation Management) mobile application so the application support Android new API, before only support Android 14 until 17.

Apr 2016 - Oct 2017

### Java & Android Developer (Remote)

Intellinum Inc, Texas - USA

- I developed Flexi LogiPro android application that provides mobile solutions for the commonly used inventory transaction for our client's. The application has dynamic view that defined by admin user on Flexi web-based application.
- I developed a part of Flexi Server in Java so the application support MySQL and PostgreSQL database.

Sep 2014 - Feb 2015

### Backend Developer

PT Hulaa Travel Indonesia

- I developed backend of hulaa website in Java and Scala.
- I developed Flight Reservation API for hulaa website.
- I integrated Veritrans Payment Gateway that helped users to pay their booking voucher.

May 2012 - Aug 2014

### Game and Web Developer

Freelance

- I developed some games using Unity, Construct2, Visual JavaScript and
