

Taxidermy Care Instructions (Soft Mount)

The taxidermy animal you have rented is “soft mount” meaning it can be bent, moved, and handled but *not very aggressively*.

It can be made wet during a scene but you must **dry it out ASAP** after you are finished.

Only clean it with mild soap and water.

When storing keep it high, away from rodents, and dry.

Do not store in plastic bags unless the animal is being transported for a short period of time.
