Senior Technician in Computer Systems
University of Pennsylvania
2015

Senior Technician in Programming
Northeastern University *2012*

Summary

Energic and enthusiastic Software Engineer with more than 6 years of experience developing code for small and big projects. Capable of working with a variety of technology and software solution. Helped to create the serverless Multicloud framework to work with AWS and Azure. Valuable team member who has experience diagnosing problems and developing solution.

Experience

Software Engineer
Intel Technologies *Aug 2018 - Present*
Client: Japanese-American international chain of convenience stores (Current) I am in charge of creating a framework to use serverless with two clouds (Azure and AWS) written in NodeJS, Typescript and using the Middleware pattern. I investigated and implemented the solution to consume S3 Storage (for AWS) and Blob Storage (for Azure).

Moreover, I updated multiple APIs to use the new framework and worked on the configuration of Azure DevOps for CI/CD.

Client: Japanese-American international chain of convenience stores (3 months of duration) Developing a new mobile app for Android and iOS in React native.

Client: Important company of Streaming players and smart TV (3 months of duration) I created multiple webforms using ReactJS. Also I created an API in NodeJS Express to send custom queries and CRUD operations to MSQLS.

Semi Sr. Programmer
Dell Technologies *May 2017 - Jul 2018*
As a full stack developer I was in charge of the maintenance of a project for a french client which provides customs logistics services to countries in Africa. I was in charge of resolution of critical bugs, time estimation of tasks, development of new business needs, implementation and development of new features on the website, production environment control and testing. Technologies used: C#, TFS, Visual Studio, SQL Server and Repository Pattern.

Semi Sr. Programmer
Accenture - NewYork *Sep 2014 - Apr 2016*
Client: Accenture's internal contract (8 months of duration) I was involved in a project to maintain a website to calculate the cost for contracts. My work was to analyze the causes of the bugs and find a solution, test it in a development environment and create a deliver to Production environment. Technologies used: .NET Framework 4.5, Unit Test Web Form, VB.NET, JavaScript, CSS3, HTML5, Web Forms, ClearQuest and TFS.

Client: Alternative asset management company (7 months of duration) I was in charge of the development of a tool for Microsoft Outlook in C# to book rooms when the user clicked upon "Create meeting". I obtained data from the DataBase and

showed a box with a map of the floor. Moreover, I helped to create the website to load the map of floor in Angular and MVC4.

Client: Largest manufacturer of seamless steel tubes (3 months of duration) I was involved in the creation of an internal website in SharePoint for showing data on an iPad making use of a scan of a QR code.
