BOOSTER WEB APP

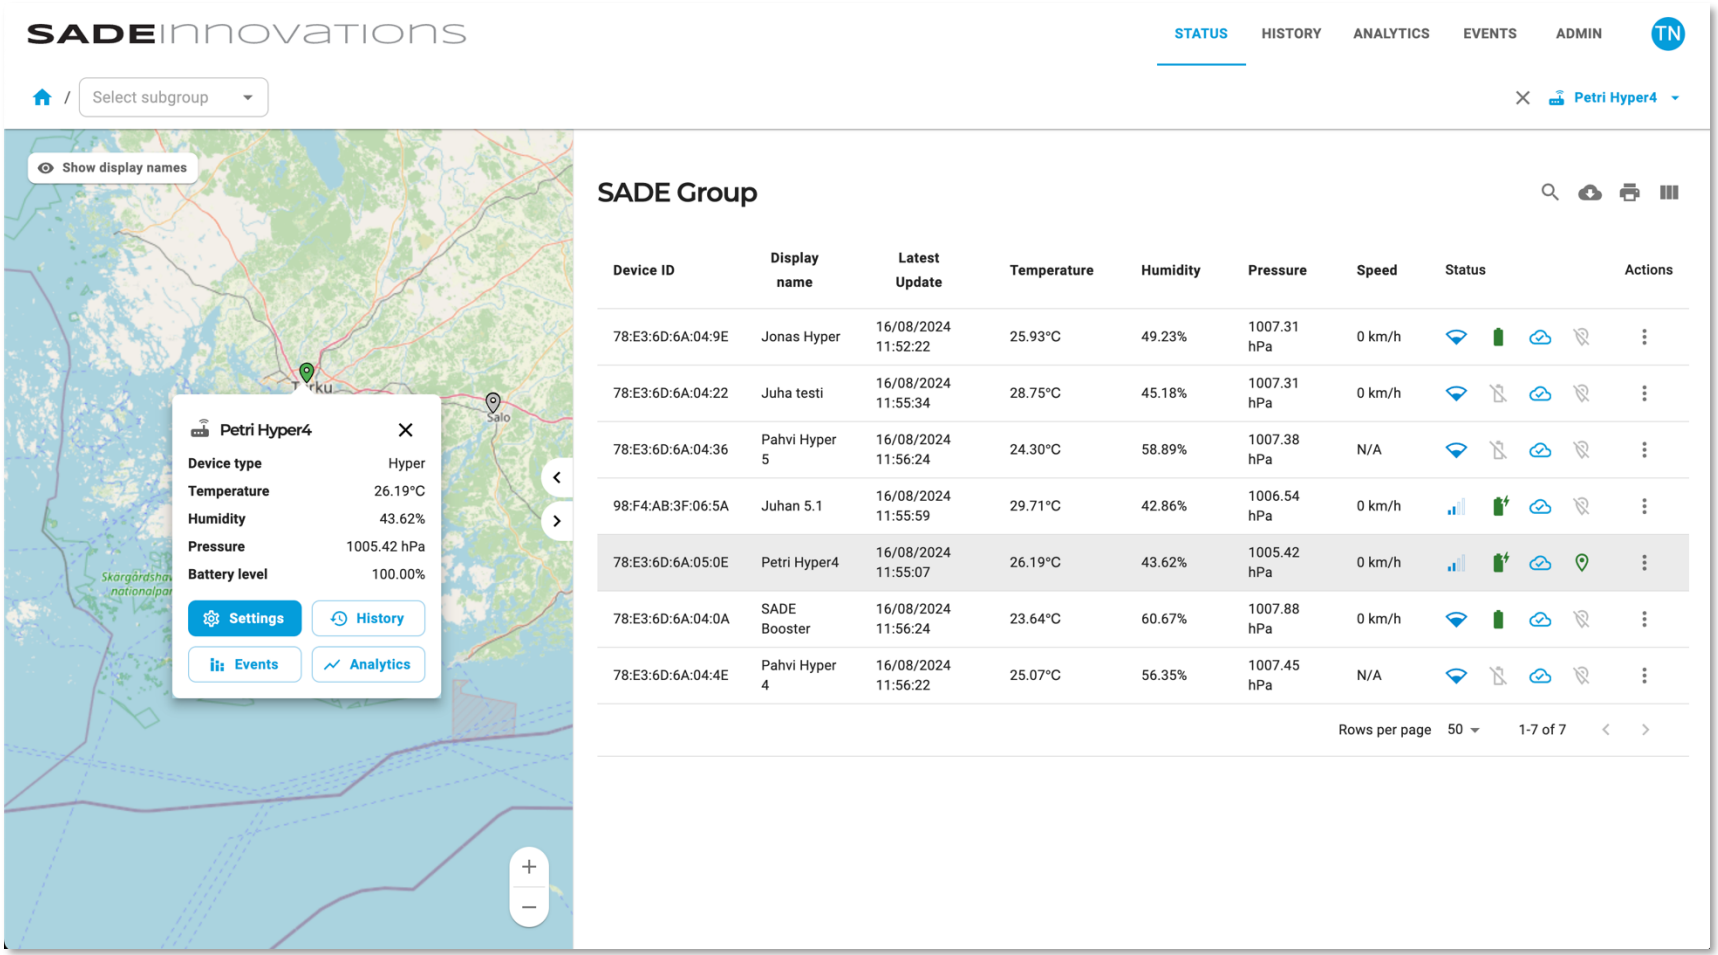

Main features and functionality (2Q25 release)

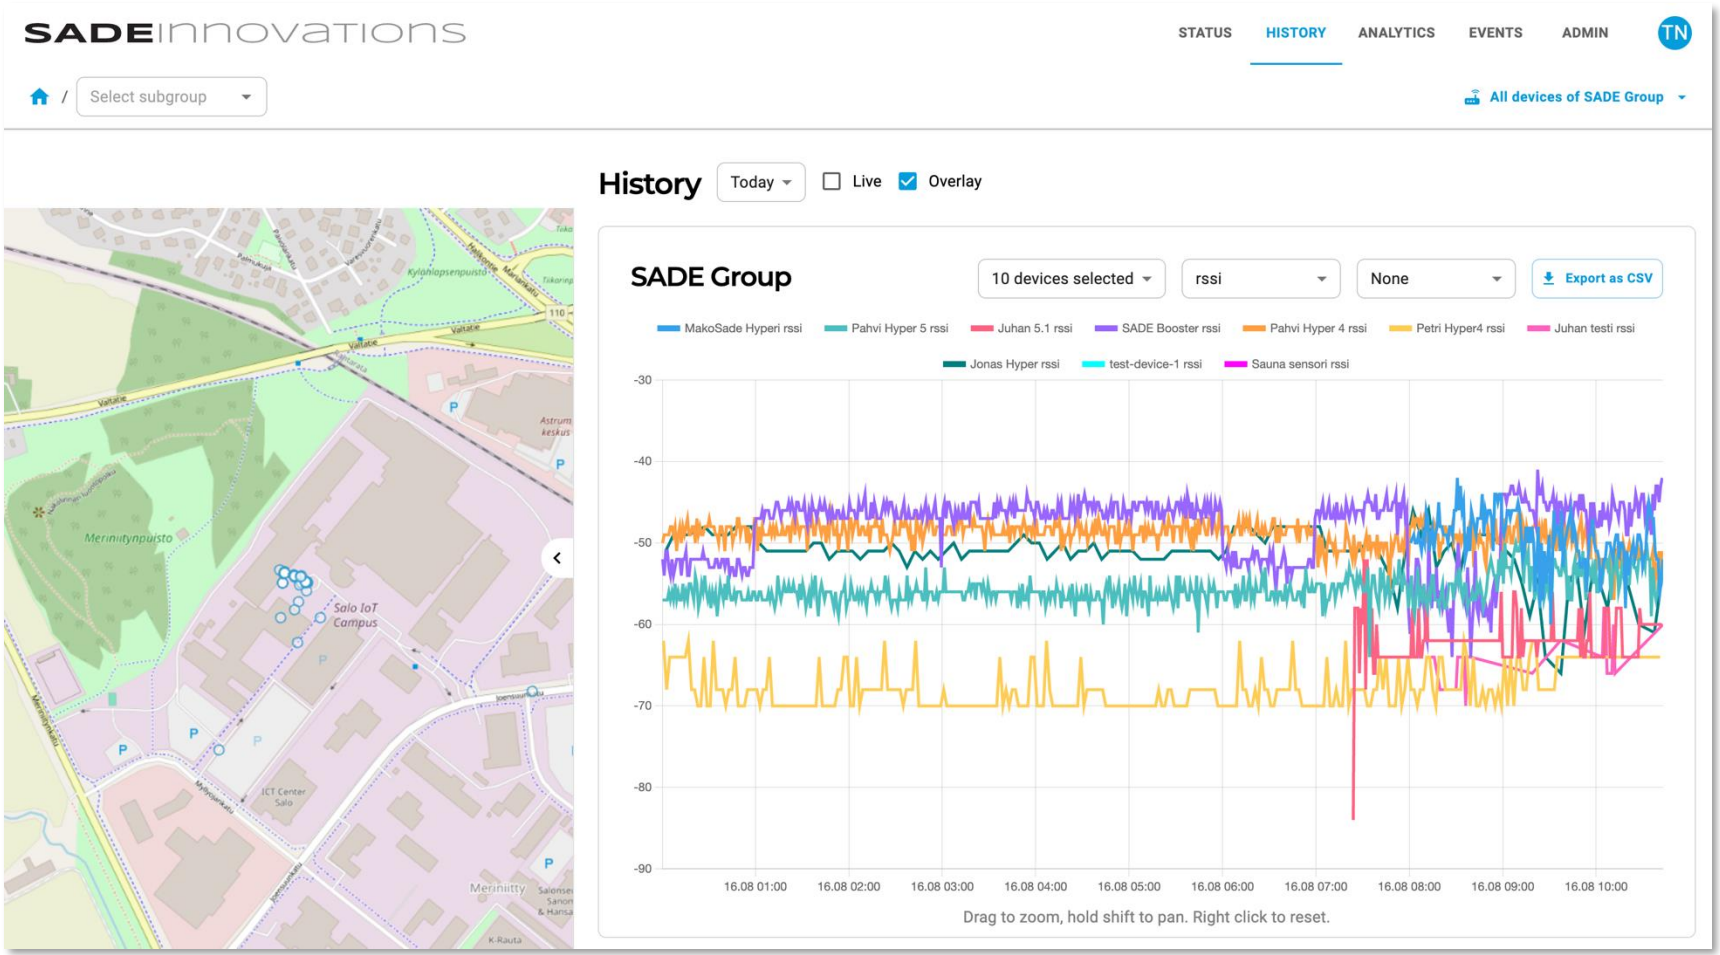

- Basis for fleet management/admin web app
  - Both consumer and installer/maintenance user type of apps
- Five views: Status, History, Events, Analytics and Admin
- Status
  - Map and table views showing latest telemetry data per device & status + location (in map) of active devices
- History
  - Diagram showing telemetry data for group of devices or single device
  - Ability to select custom time range, show live data or select a session containing a logical set of measurements (e.g. driving session)
  - Data points can be shown also in map (if location available for telemetry data)
  - Ability to export data .csv format
- Events
  - Diagrams and table showing event history for selected time period
  - Support live mode where events are added the view in real time
- Analytics and reporting
  - Enables embedding of Quicksight dashboards
  - Custom data processing and data visualizations for TBs of data
  - Built-in support for PDF based reports
- Device settings popup
  - Change device settings & configuration
  - Update individual device using OTA
- Admin functionality
  - Manage group hierarchy, users and devices
  - Manage notifications for events & users to receive SMS, email or push notifications
  - Perform batch OTA updates for whole device fleet
  - Groups: create/remove subgroups, change metadata
  - Users: create, remove, change role
  - Devices: create, remove, change group
- Group and device selection & status overview
  - Shows devices as hierarchical tree based on groups
  - Ability to filter devices & groups using quick search
- Payments support
  - UIs for making onetime/yearly/monthly payments
  - Advanced payments reporting and product management
- Customizable user management UIs
  - Login, create user & forgot password views
  - User profile view to change user data (change email and password)
  - Easy to integrate with 3rd party identity providers using SAML2.0 or OIDC & enable, multi-factor authentication
- Localization support
  - Ability to change used language on the fly + selected language stored to user profile
- Implementation based on React & Material UI
  - Shares the application engine/data model with web UI => code reuse between mobile and web UIs
