

SAFESEA

“For most of the history, man has had to fight nature to survive; in this century he is beginning to realize that, to survive, he must protect it. Water and air, the two essential fluids on which all life depends, have become global garbage cans.”

— Jacques-Yves Cousteau

What is SafeSea?

SAFESEA is a community-driven BEP-20 token built on the Binance Smart Chain (BSC). It was launched on December 25th, 2021.

According to the UN, Open Ocean spaces show that current acidity levels have increased by 26 percent since the beginning of the Industrial Revolution. At the same time, coastal waters are deteriorating due to pollution and eutrophication.

Without coordinated efforts, coastal eutrophication is expected to increase in 20 percent of large marine ecosystems by 2050.

Our Mission

SAFESEA's mission is to solve the problem of marine pollution and help conserve endangered species, as well as to improve the health, conservation and sustainable use of the oceans and their resources.

To achieve this goal, **SAFESEA** will develop environmental activities to decontaminate natural places (oceans, beaches, rivers, lakes, etc.) and to establish partnerships with large Non-Governmental Organizations (NGOs) for larger projects.

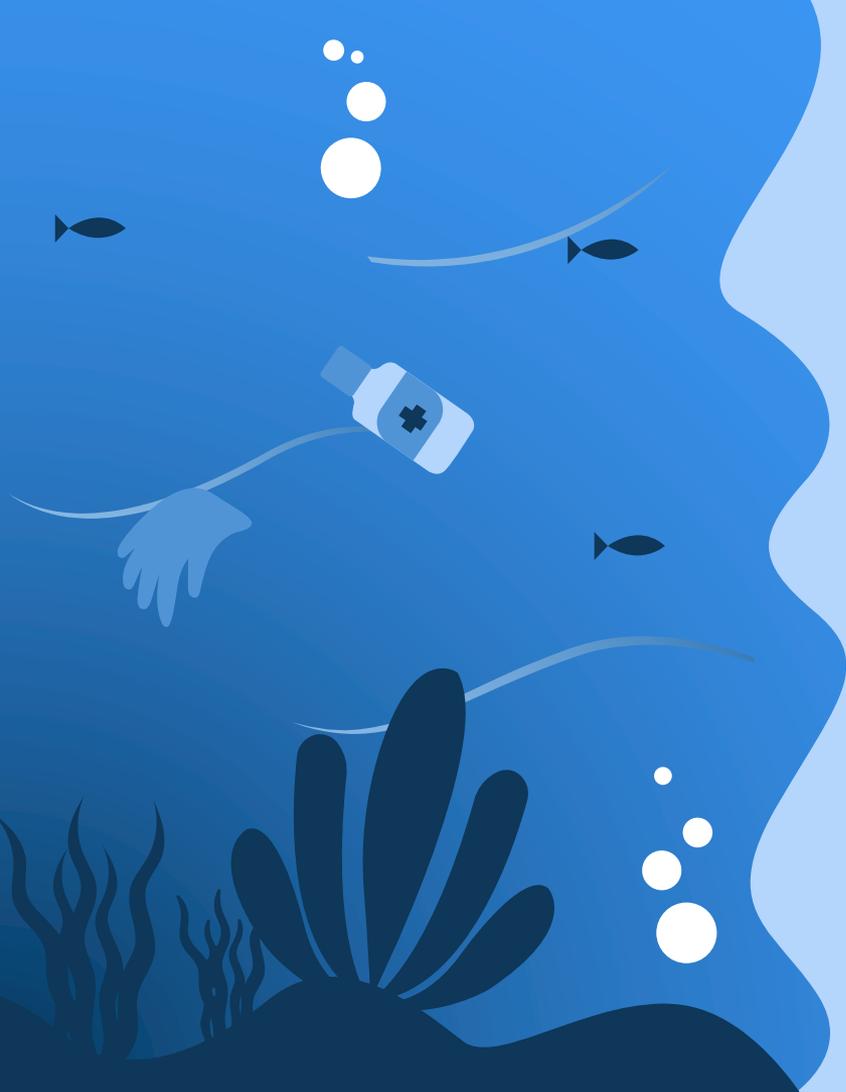

Current Difficulties

Traditional NGOs rely on donations as a funding mechanism. Consequently, there is a barrier to entry for carrying out projects with high financial costs.

The cryptocurrency boom provides a great funding opportunity for projects of all kinds.

Our Solution

The major feature that distinguishes **SAFESEA** from traditional organizations is the ease with which it obtains funds.

At **SAFESEA**, investors not only collaborate in environmental actions, but can also earn returns on their investments.

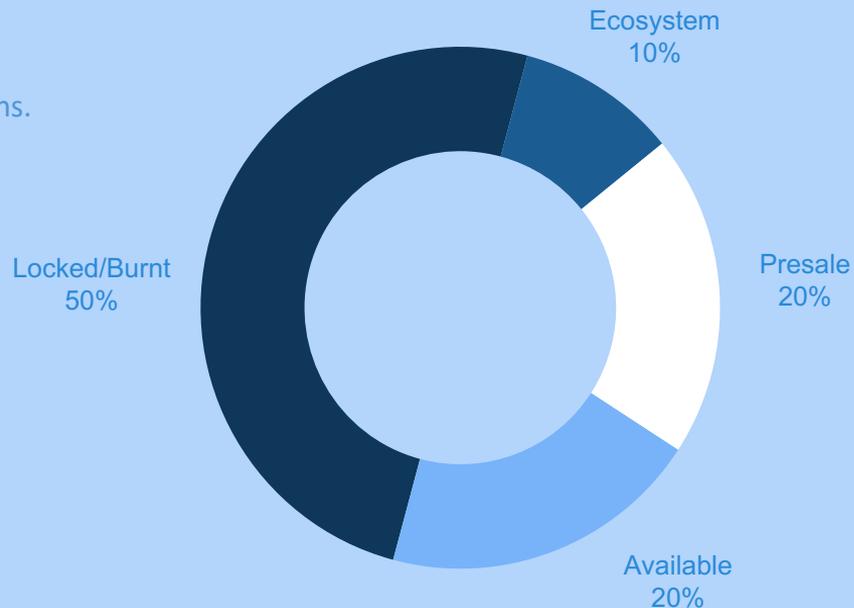

Token Allocation

TOKEN DISTRIBUTION AT LAUNCH

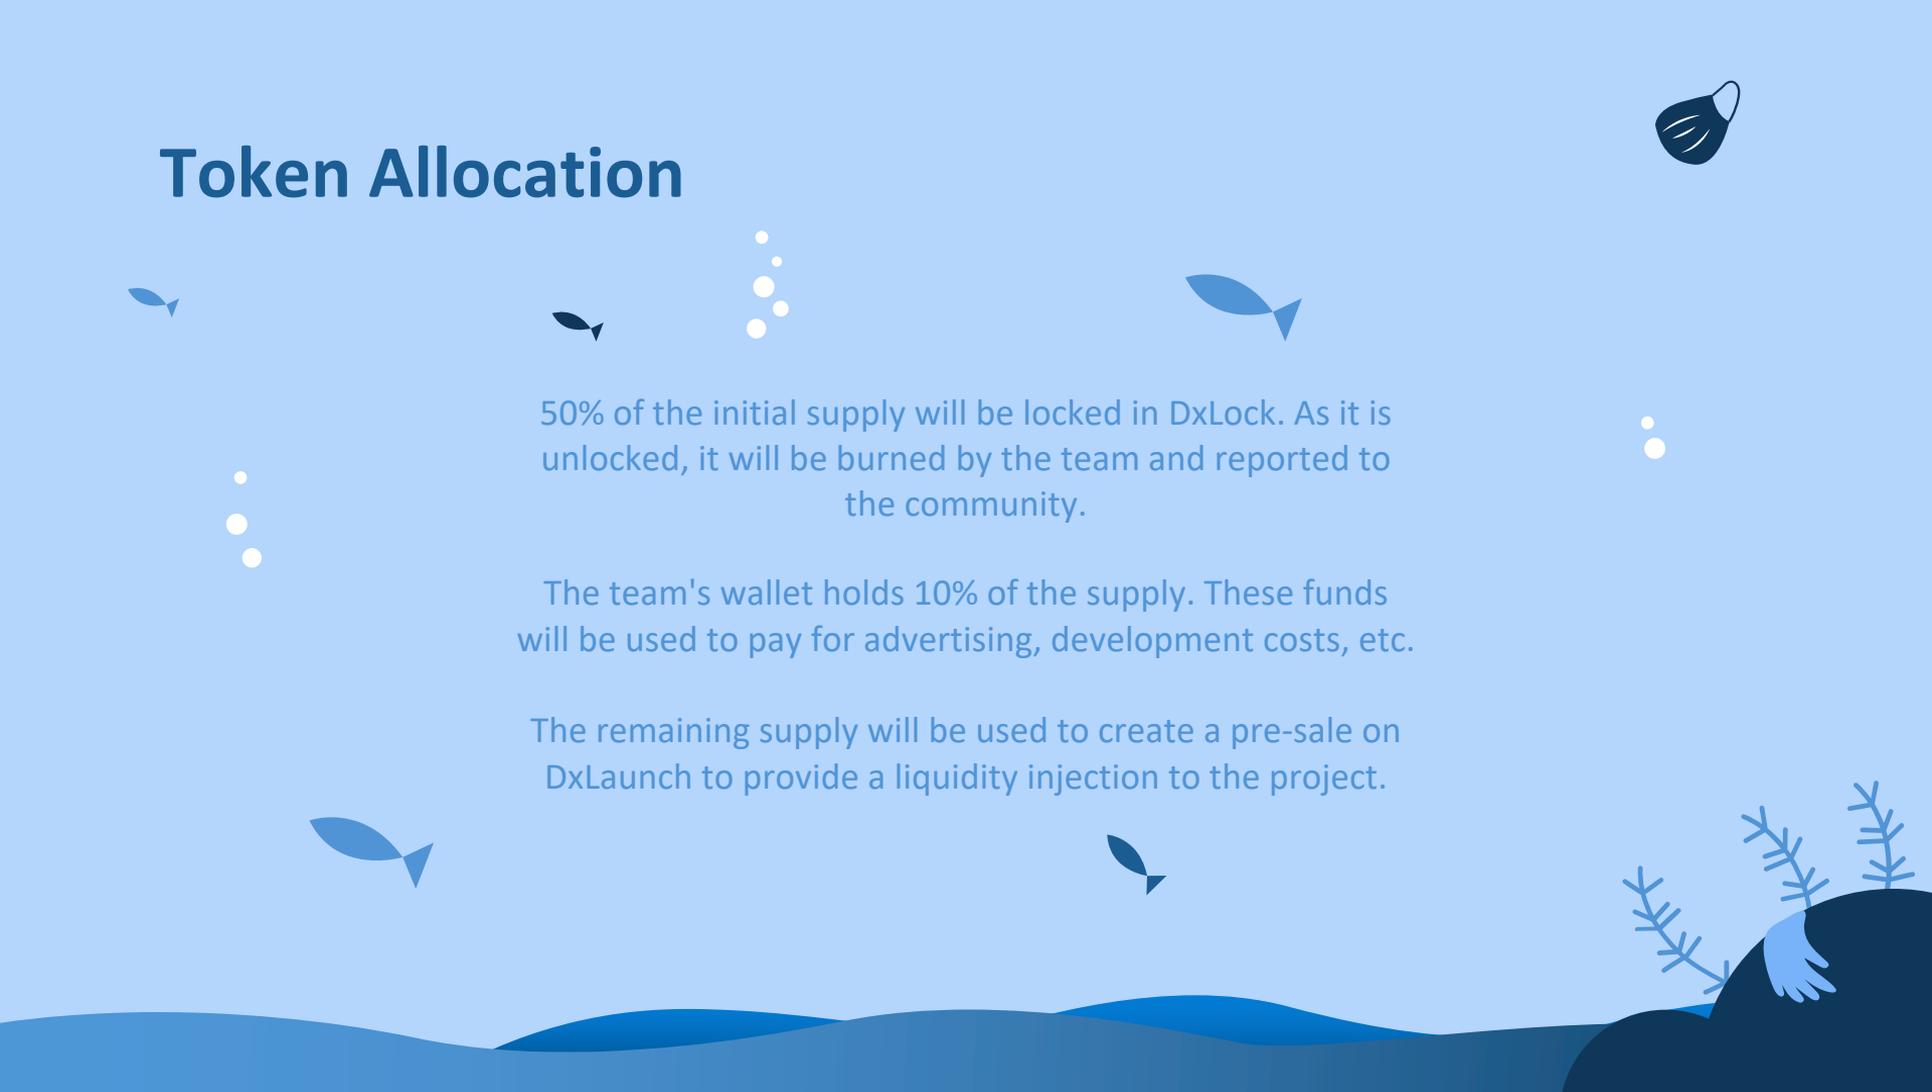

Total supply: 1,000,000,000,000 SAFESEA tokens.

- 50% – Locked/Burnt
- 20% – Presale
- 10% – SafeSea Ecosystem
- Remaining on PancakeSwap

Distribution

Token Allocation

50% of the initial supply will be locked in DxLock. As it is unlocked, it will be burned by the team and reported to the community.

The team's wallet holds 10% of the supply. These funds will be used to pay for advertising, development costs, etc.

The remaining supply will be used to create a pre-sale on DxLaunch to provide a liquidity injection to the project.

SafeSea Protocol

During each trade, three simple functions occur: *LP acquisition*, *Reflection*, and *Burn*.

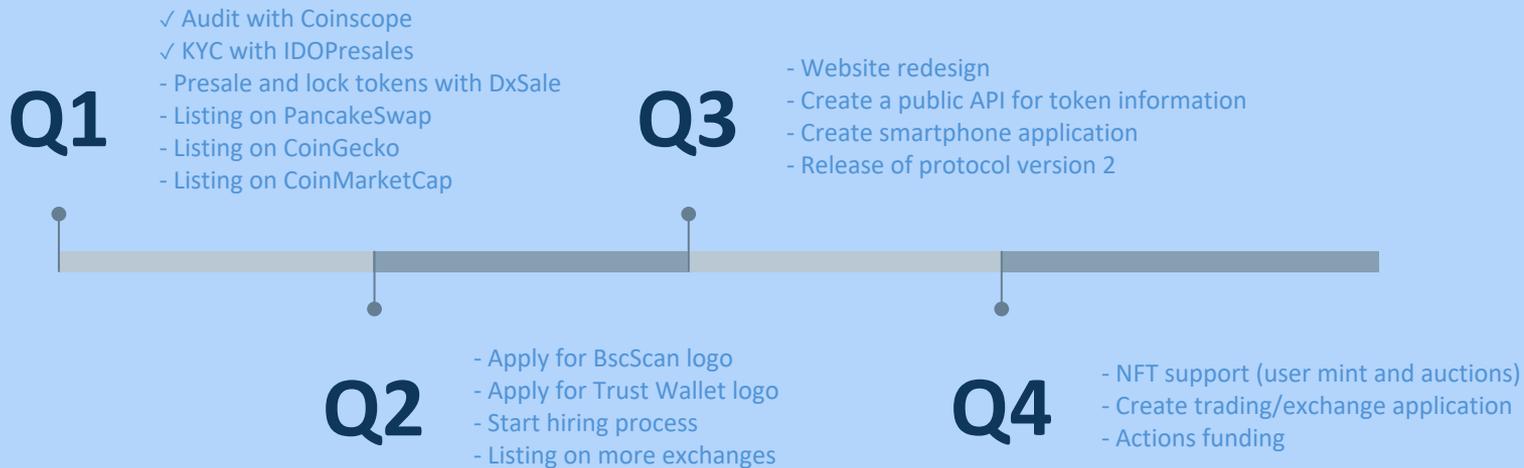

Each transaction is taxed at a rate of 10%, which is divided into three parts:

- 2.5% is sold by the contract into BNB.
- 2.5% is added by the contract to Liquidity Pool
- 5% is redistributed to all existing holders.

What it means for our holders

The amount of redistribution depends on the volume of the traded token. This is done to avoid a downward selling pressure that could be caused by early buyers who have obtained a higher return on investment. As the LP of **SAFESEA** tokens increases, price stability reflects this feature with the benefit of a solid price floor and cushion for holders.

Roadmap

Audit

SafeSea contract audit review can be found here:
<https://www.coinscope.co/coin/safesea/audit>

KYC

SafeSea KYC verification can be found here:
<https://idopresales.com/kyc-service/safesea-kyc-verification/>

Presale

The presale will be performed once the KYC verification process has been completed.

540 billion Presale Rate (per BNB)

500 billion PancakeSwap Rate (per BNB)

85% PancakeSwap Liquidity
