Flush Mount Adapter with Socket Meter

Flush Mount Adapter with Meter Expanded

#### **DESCRIPTION**

These Flush Mount Panel Adapters (SWA series) convert any standard socket meter to a small case switchboard meter, eliminating the need to stock or maintain more than one type of metering package. These panel adapters are a low cost way of converting an antiquated switchboard meter to a solid-state metering system using a socket meter. It requires no changes to the substation steel panel or its existing cutout for installation.

Many utilities have already standardized on socket meters, taking advantage of lower costs and simplified maintenance. These panel adapters provide an easy and convenient way of installing socket meters on panels, thus eliminating the need for more expensive switchboard meters. With these adapters, there's no need to keep an inventory of various meters or use switchboard meters at all.

The innovative Flush Mount Panel Adapter is adjustable, with ten field-selectable lengths for precise installation. Its patented design allows for easy installation and maintenance. These adapters can be delivered quickly – no long lead times.

### **ADVANTAGES (New or Retrofit Installations)**
