would pause all 3d models if moving

AR Art Player

Art (images, 3d models, videos) will be placed in a location based on this.

If pressed over art then goes to next in playlist. If no playlist does nothing

- Places the art. Also can pause moving 3d models.
  - If clicked in new space then places next art in playlist.
  - Placed based on '+'
  - If press while on on existing art pauses or does nothing.

Remove: when clicked, removes closest model to '+' in center of screen.

Remove all: clears all models on AR player.

- Future features: Playlist of playlists
  - ~~Have it remember your scene for later.~~
    (would require to add an anchor to determine orientation of everything).
  - maybe this anchor can be an image of something that doesn't move in specific space.
  - we have anchor images saved in playlist which save the scene/playlist to be used later.
  - on top of galleries, room customization is another lane.

(just like insta)
< 2
1. Select 3D model from gallery
- is size right?
or
1. Take image/images from gallery
2. Convert to 3D model
3. set name
4. Check: we approve
5. post
may have to pay a fee? up for debate. Maybe $5 for 30 days?
On spotify: $40 a year unlimited or like $30 a song forever.
But insta does not. Gram
