How can we aid you today?

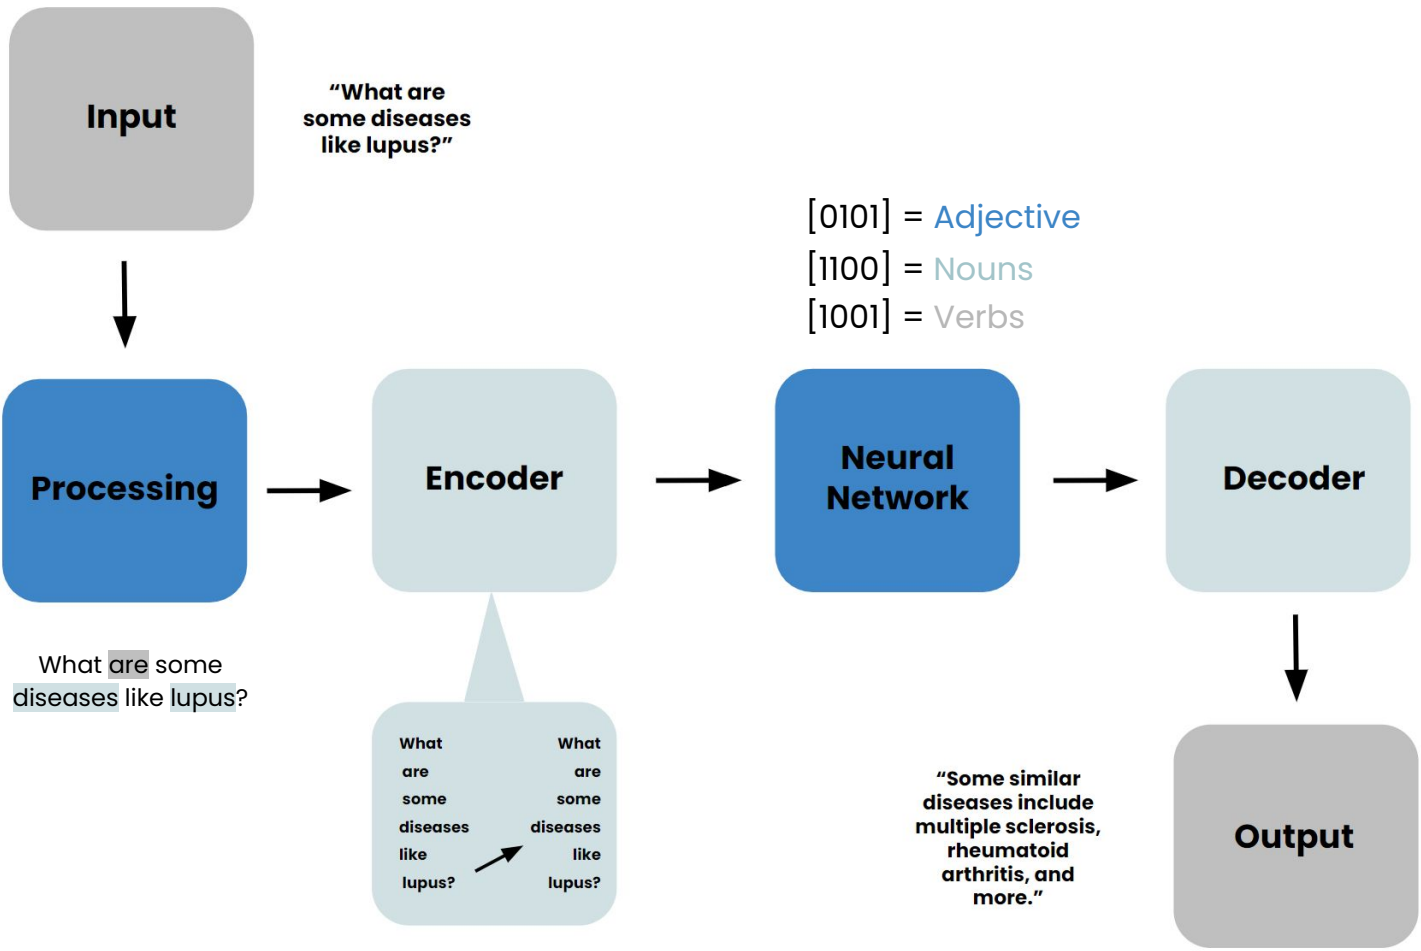

My patient seems to be facing a variety of symptoms indicative of multiple sclerosis. However, how can I be sure this isn't transverse myelitis or lupus?

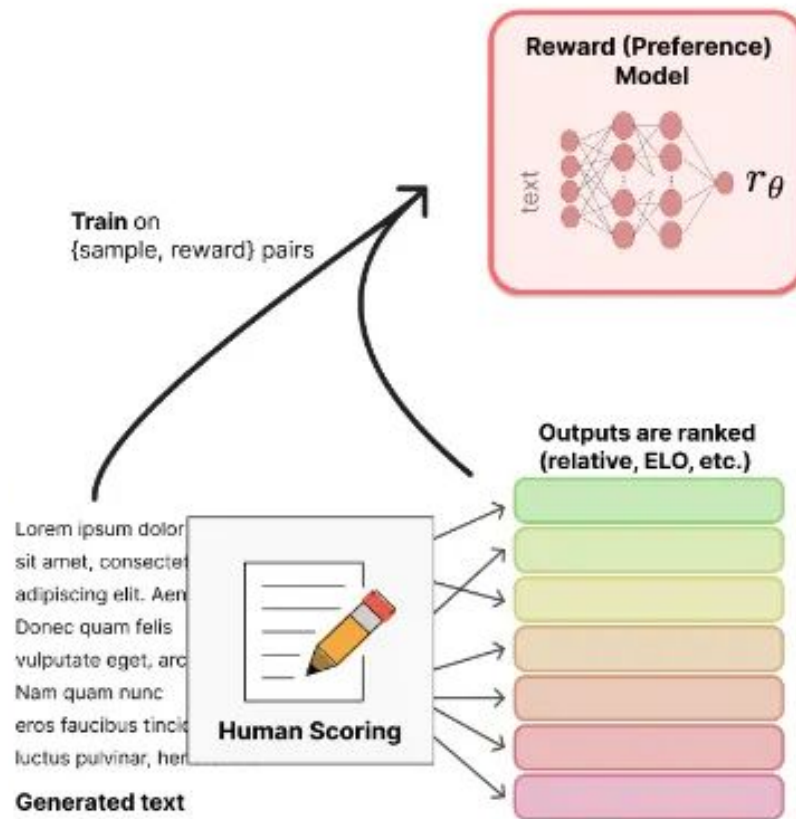

Based on [this article](#) from BioMed Central, to differentiate between Multiple Sclerosis (MS) and other conditions that have similar symptoms, such as transverse myelitis or lupus, your patient will likely undergo a variety of tests and examinations. These may include:

Follow

ChatGPT can sound plausible even if its output is false

Like other [generative](#) large language models, ChatGPT makes up facts. Some call it “hallucination” or “stochastic parroting,” but these models are trained to predict the next word for a given input, not whether a fact is correct or not.
