for Free TON Dev Experience

Free TON Dev Experience Jury Contest	
Name	Roman Romanov
E-mail	roman.romanov@rrstd.ru
Telegram ID	@RRoman_Tver
LinkedIn ID	-
Github ID	https://github.com/RomanovRoman
Choose the Jury Groups which you want to join (underline your choice, multiple choice is possible)	<p><u>SDK Contests</u></p> <p><u>Toolchain Contests</u></p> <p><u>Node Contests</u></p> <p><u>Smart Contracts</u></p> <p><u>Other Contests within Free Ton Dev Exp subgovernance</u></p>
Professional Experience (underline all what is relevant to blockchain development)	<p>More than 20 years of experience in the field of information technology. In addition to working in IT, I taught for some time at the university's magistracy and was engaged in applied research (area of scientific interest: systems and management processes in the field of information technology). I am currently a leader and partner in the IT company https://rsquad.io/. Blockchain development is one of the highest priority areas of our business.</p> <p>Despite the fact that I am formally the CEO of the company, I still write the code myself. I have a fairly extensive technology stack, but the main one: C++, JS, Ethereum, Solidity, I have been studying TON technologies for more than a year.</p>
Proof of qualifications (links to open-source projects, etc)	<p>As a developer and architect, I took part in the following projects (at RSquad we respect the agreements, so, unfortunately, I cannot disclose the names of the projects if the NDA is signed):</p> <ul style="list-style-type: none"> ● Development of a complex of technical solutions for a cryptobank; ● Creation of a cryptocurrency exchange; ● Creation of a closed analytical platform for a cryptocurrency project; ● Creation of an advertising exchange; ● Creation of a multi-level crypto platform for exchanges, working with data and simplifying e-commerce;

	<ul style="list-style-type: none"> ● Creation of an exchange for trading in intellectual property; ● Creation of a system for accounting for mutual obligations based on the corporate blockchain; ● Development of an automated information technology management system for a large mining enterprise; <p>You can see more on our website.</p> <p>Also, I personally and my RSquad team take an active part in the life of the community: we are winners of the airdrop, TVM, IMS, AtomicSwaps contests, in addition, we have already released additional technical solutions for the development of the Free TON project and the project community and we are not going to stop there.</p>
<p>Describe what you have done using, what you know about code base of Free TON</p>	<p>Wrote a number of contracts for Free TON. I actively participate in the life of the community and help with consultations. Also, our team periodically participates in the development competition for Free TON</p> <p>I'm also doing validation, actively supporting the validation node.</p>
<p>Proof of your skills in building smart-contracts (only for those who want to join Smart Contract Jury group) (links to the deployed by you smart-contracts)</p>	<p>Wrote contracts for the Atomic Swaps competition - https://github.com/RSquad/ton-swap/tree/master/free-ton/contracts</p> <p>I actively worked with smart contracts on the client-side and server-side, for example, took part in the creation of https://easy-vote.rsquad.io</p>
<p>Disclose the organisations/the companies you are working for</p>	<p>CEO — https://rsquad.io/</p>
<p>Personal Information (add anything about yourself that you consider relevant)</p>	<p>I have been following the Free TON project since its inception, in addition, our team has been cooperating for quite a long time with various companies and projects involved in the launch of the Free TON network. I fully share the principles and approaches described in the Declaration of Decentralization, and I really like the project itself, and since I still remain a developer, I want to accept as a member of the jury in DevEx subgovernance in order to develop and improve the infrastructure of colleagues' work and take part in the creation of new solutions</p>
