My application to FT SMM Sub-governance Jury contest

I'm an IT specialist and crypto enthusiast. I think I will be useful in technical part of judging.

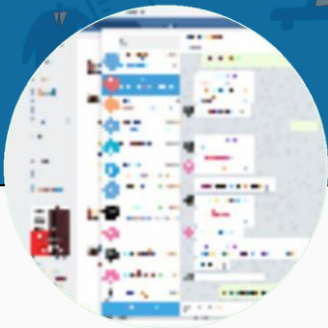

Technical skills for judgment

- Making **Web sites** for customers (markup, PS to html, full stack prog: html, css, js, php, sql, and many other technologies)
- Making **promo materials** for exhibitions (Corel, PS)
- Making **GUI** for control systems (markup, programming)
- Developing control **system architecture** for customers
- Making automated advertising with **robots** (avito, olx)
- Making automated campaign data **parsing** (metrics, proxy lists)
- I'm a professional industrial automation programmer 20+ years (Sorry, these materials are private)

Help in community

- Making **proof-reading** of SMM SG articles
- Making **time-codes** for weekly AMA sessions
- Making **analytic report** for proposal of RusBit
- Surf Beta **testing** and improvements **suggestions** - I'm the one who found famous time sync problem in Surf in 2020-07-02
- Writing **Proposals**
- Participating in **Contests** and creating works

Check out examples of my work below!

Making Web sites for customers (markup, PS to html, full stack prog: html, css, js, php, sql, and many other technologies)

An offer of cooperation with RusBit

Partnerships

WoneyFest Dec '20

my opinion - LOW interesting project for people, team changed in 2019, 100kTON - is too much, project has small audience, KPI#1 For attracting the first 10000 users WILL NOT BE REACHED, Advert.price over the market. 10kTON is a maximum.

TON 2FA. Two-factor authentication for any online business. First mass application for Free TON.

Russian version below.

Author: Woney Fest
Telegram: @moqub
Date: 2021-Jan-28
PDF: 370.2 KB file on MEGA
DOC: 80.9 KB file on MEGA

Short description

This proposal describes the idea of mass deployment of the Free TON infrastructure. This solution will give a result suitable for widespread implementation.

Problem

In fact, personal information and correspondence of users is distributed on the network among different services. Governments of countries seek to obtain illegal access to personal information. At the same time, Internet services use **two-factor authentication using the user's cell phone** as a reliable solution for user identification. But this is not the case, because **governments control local cellular companies and can intercept SMS**. The unique code intercepted by the government in SMS makes it possible to restore **access to accounts, channels and user groups**, including in the Telegram messenger. The right decision is to abandon the cell phone. It means restoring access to services, but

Free TON

Proposal: SMM SG Workflow Rules Update

SMM Subgovernance

WoneyFest 1 Feb 28

Description

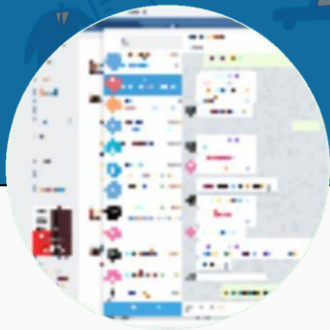

By a common decision, these proposals were made by a general vote at the AMA sessions and discussions in the chats of Free TON SMM subgovernance. To consolidate the words, it is proposed to accept them during voting on the blockchain

Following suggestions:

1. The news articles reserved by SMM SG authors should be written and published within 1-3 days in compliance with the deadline indicated in the content plan. The deadline is set by the moderator of the plan after a discussion with the author of the article.
2. The educational articles reserved by SMM SG authors should be written and published within 10 days in compliance with the deadline indicated in the content plan. The deadline is set by the moderator of the plan after a discussion with the author of the article.
3. Deadlines for other types of articles are negotiated on an individual basis.
4. In case of violation of the rules for filling out the content plan (untimely updating of the status of the article, not indicating tags and category of the article on the blog), the payout for the given article is reduced by 10% for each missing element.
5. When an article reserved by an author in the content plan is written and published by another author, the reward for the article is received by the SMM SG member to whom the article was originally assigned.
6. If the author does not respect the deadline for writing and publishing an article, the right to write it passes to the author, who expresses his willingness to write it as soon as possible.
7. The content published on the [blog freeton.org](https://blog.freeton.org) must be unique. Content from the blog can be

Free TON

Airdrop contest: Real life personID and tiketID exchange

Main Contest Contest Proposals

W WoneyFest Jun '20

Hello. My proposal is using real life face-to-face communication. In fact, problem of fair and anonymous TON airdrop is the same problem as confirmation for yourself that Your vote was rightly calculated on State voting.

How I suggest make a State voting - Give everyone unical code = tiketID. And in this case government will confirm the citizen's person. This tiketID must be printed and protected like a banknote. Then people exchange their tiketID 1-to-1 each other who they know for some time. In voting time people remember their tiketID and they vote by their current tikets. After voting government publish the table= (tiketID,vote). So people can check that their vote was calculated correctly. And each will check result of common voting by this table with anonymity of tiketID.

Now we need to replace government printed and protected as a banknote tickets to something. It will be autogenerated tiketID and personID on FreeTon website.

And we need to replace government confirmation the citizen's person to other people confirmation - friends, family any who know You.

You will get personID from FreeTON website and You need give Your personID to Your friends and ask they to confirm that You are real person on FreeTON website. To confirm You, they need also get they personID and tiketID and submit two personIDs to FreeTON website - own and Yours. It will be good if your personID will confirm as many friends as possible.

Also You need to exchange Your tiketID with who NOT in group of Your friends but You need to garantee that this is a real person, not a bot. You can exchange received tiketID with other people as many times as possible. You can exchange received from non-friend tiketID with Your friends who also exchanged his tiketID with non friend.
