

Dear colleagues, good afternoon!

My name is Roman Nguyen, and this is my submission for a vacant position on the Free TON DevEx SubGovernance jury.

I am a partner at RSquad IT company (<https://rsquad.io/>). Our company implements various projects for the development of information systems, mainly in the areas of blockchain and web. I am the leader of the web direction in our company.

As a developer and architect, I took part in the following projects (at RSquad we respect the agreements, so, unfortunately, I cannot disclose the names of the projects if the NDA is signed):

- Development of a complex of technical solutions for a cryptobank;
- Creation of a cryptocurrency exchange;
- Creation of a closed analytical platform for a cryptocurrency project;
- Creation of an advertising exchange;
- Creation of a multi-level crypto platform for exchanges, working with data and simplifying e-commerce;
- Creation of an exchange for trading in intellectual property;
- Creation of a system for accounting for mutual obligations based on the corporate blockchain;
- As well as other projects and prototypes using blockchain technologies and / or automation of management processes in the following areas: logistics, finance, corporate governance, marketing and advertising, etc.

I am quite actively involved in the public life of the Free TON project:

- Initial member in DGO Subgovernance
- Initial member in Web & Design Subgovernance
- Architect of the solution to simplify the voting process EasyVote (<https://easy-vote.rsquad.io/>)
- Together with the team took part and was the winner of various Free TON competitions, for example:
 - Our front for the Atomic Swap competition (<https://ton-swap.live/>)
 - Our corporate repository for Free TON projects (<https://github.com/RSquad/ton-swap>)

As for the technology stack, I am an expert in front-end technologies (TypeScript, React, Angular etc). Also, I write in Solidity.
